- AXA World Funds - Global Sustainable Equity (note 1b)
- AXA World Funds - Optimal Income
- AXA World Funds - US High Yield Bonds

Regarding the Distribution of the SICAV in the United Kingdom

The facilities, marketing and sales agent in the United Kingdom is AXA Investment Managers UK Ltd., 22 Bishopsgate, London EC2N 4BQ United Kingdom.

As at 31 December 2024, all Sub-Funds are registered in the United Kingdom, apart from:

- AXA World Funds - ACT Emerging Markets Bonds
- AXA World Funds - ACT Factors - Climate Equity Fund
- AXA World Funds - AXA SPDB China A Opportunities (note 1b)
- AXA World Funds - Europe ex-UK Microcap
- AXA World Funds - Global Dynamic Allocation (note 1b)

Directors' Report

Dear Shareholders,

Your Board of Directors of the Management Company is pleased to report on the progress of your SICAV for 2024.

The financial markets through 31 December 2024

Financial Markets Conditions

Central banks continued to keep pressure on reducing inflation at the start of the year, with upside US inflation surprises resulting in a delay to the expected Federal Reserve easing cycle. However, inflation continued to fall in most regions and most developed economy central banks eased policy over 2024 as concerns shifted from upside inflation risks to more balanced price outlook risks or even outright growth support. Concerns grew over the scope for Chinese growth – resulting in significant official stimulus – and persisted across the Eurozone, despite improved activity. However, the US continued to expand at a strong pace. 2024 was a year of many political events. Europe held several elections, including a surprise one in France, but in several instances those elections failed to deliver decisive results and coalitions have either failed to emerge or have collapsed. The UK saw a change in government, while the US re-elected Donald Trump for a second (non-successive) term.

In Europe inflation continued to fall, and while activity improved, it remained subdued – this increasingly reflecting demand deficiency, rather than supply constraints and opening the way for monetary policy support. Headline inflation fell from 2.9% at the end of 2023 to a low of 1.7% in September, before energy base effects accounted for some increase to close 2024 at 2.4%. A more marked improvement in 'core' inflation saw the rate fall to 2.7% by end-2024 from 3.4%. In part this reflected ongoing economic weakness. Quarterly GDP recovered from stagnation across 2023, rising by 0.3% in Q1, 0.2% in Q2 and 0.4% in Q3 – although this looked more temporary due to such factors as the Paris Olympics and we expect a softer Q4. Growth remained mixed across states, Germany was expected to post a second year of outright contraction. By contrast, Spanish growth continued at a strong 0.8/0.9% pace in each quarter. More generally Eurozone industrial activity continued to contract, but services and consumer spending improved. Specifically, growth headwinds appear to have shifted more towards demand deficiency from supply constrained – although unemployment still remained at record lows (6.3% in November). As such, the ECB saw more scope to support growth with easier monetary policy. The ECB cut its main deposit facility rate from the 4.00% high in June by 0.25%. It moved again in September, where it indicated a quicker pace of cuts, and reduced rates by 0.25% at successive meetings for the rest of the year, a pace we expect to persist over H1 2025. European politics, however presented a further risk. Several states remain without government following elections that have failed to form coalitions. France also saw the collapse of a coalition government after surprise mid-year elections. The German coalition also collapsed and will see fresh elections in February 2025.

The UK saw a firmer pick-up in growth, which combined with policy measures have seen a more moderate easing in core inflation, in turn resulting in slower Bank of England policy easing. GDP rose strongly in Q1 as public sector output rebounded from the H2 2023 recession. However, this faded in successive quarters with H2 2024 expected to see effective stagnation and only moderate underlying private sector growth. This led to an easing in the labour market, the unemployment rate rising to 4.3% in the 3-month to October from 3.9% at the end of 2023 – despite doubts about the official data. However, wage growth – although below the end-2023 pace of 5.8% - remained elevated at 5.2%. This underpinned concerns about inflation and although the headline rate fell from 4.0% end-2023 to 2.6% in November, and core inflation has eased to 3.5% from 5.1% over the same period, services inflation remains elevated at 5.0%, despite being lower than the end-2023 6.4%. The Bank of England has eased policy more slowly, cutting rates to 4.75% with two cuts in August and November – a pace we expect to continue through 2025. Uncertainty continued to surround the UK public finances. The election of a new Labour government mid-year saw increased focus on the previous government's record. However, the new government surprised by increasing taxes, spending and borrowing in an October budget, raising fresh concerns over the scale of public borrowing.

Directors' Report

The financial markets through 31 December 2024 (continued)

By contrast, the US continued to grow robustly. Growth continued to be underpinned by solid consumer spending, showing few signs of softening and in turn buoyed in part by gains to wealth. Yet despite still strong growth – expected to repeat 2023's just below 3% pace - the labour market eased somewhat and inflation fell. Unemployment rose from 3.7% at the end of 2023, to 4.1% in December and the pace of payroll growth slowed, albeit with temporary, hurricane disruptions in the final months of 2024. Inflation also fell, with the headline slowing to 2.9% in December from 3.4% at the end of 2023, reflecting improvement in core inflation to 3.2% from 3.9%. This combination of strong growth and continued disinflation owed much to supply-side improvement. In part this reflected labour supply growth from strong immigration in recent years, although immigration flows slowed markedly over 2024. Productivity growth also appeared to have picked-up. In the face of softer inflation the Federal Reserve (Fed) eased policy. Stronger services inflation at the start of 2024 delayed the start of Fed easing from mid-year. The Fed then appeared to overreact to signs of labour market weakness over the summer with a surprise 50bps rate cut in September. It followed up with more modest, but successive rate cuts for the rest of the year taking the Fed Funds Rate to 4.50-4.25% from a peak 5.50-5.25% rate. The US also focused on Presidential Elections in 2024. President Biden belatedly stood down from re-election making way for Vice President Harris, who lost to former President Donald Trump. Swings in expectations about the election outcome and Trump's unorthodox economic proposals resulted in some market volatility over H2 2024.

In Asia, China continued to dominate concerns. The Chinese housing market saw its third successive year of contraction, falling by 5ppt to take the total contraction to 15% to date - with further declines expected. This has weighed both on household spending – housing a key source of household wealth – and on China's entangled local governments and banking system. Both have slowed economic activity. China's annual GDP growth met the official target of "around 5%" in 2024, close to 2023's 5.2%. This reflected significant stimulus on behalf of the Chinese government and central bank. China continues to skirt outright deflation; inflation averaged 0.2% in 2024 the same as in 2023. Authorities announced significant further stimulus at the end of 2024, with most of this to be quantified at the National Peoples Congress in March 2025. Japanese growth improved across 2024. A weak start, where regulatory-related drops in industrial output resulted in a sharp initial GDP contraction, were unwound with stronger growth in Q2 and Q3, mirroring consumer spending. Japan appears to have moved more decisively away from its own decades long battle with deflation. Inflation expectations have risen and wages posted a multi-decade high increase in 2024, with preliminary signs of further gains for 2025. Headline inflation rose to 2.9% in November 2024 from 2.6% end-2023, even as inflation excluding fuel and fresh food slowed to 2.4% from 3.7%. This encouraged the Bank of Japan (BoJ) to tighten policy as most other jurisdictions cut rates. The BoJ raised its main policy rate from its near decade long low of -0.1% in March and again to 0.25% in July. Although the BoJ's communication over its intention for further hikes has been stuttering, we expect more hikes in 2025.

Directors' Report

The financial markets through 31 December 2024 (continued)

Financial Markets Review

Stock Markets

(main indexes, in pts or %)	31-Dec-2024	31-Dec-2024 / 31-Dec-2023	31-Dec-2023	31-Dec-2023 / 31-Dec-2022
CAC 40	7380.7	-2.2	7543.2	16.5
Eurostoxx 50	4896.0	8.3	4521.7	19.2
FTSE 100	8173.0	5.7	7733.2	3.8
Nikkei	39894.5	19.2	33464.2	28.2
S&P 500	5881.6	23.3	4769.8	24.2
MSCI World	3707.8	17.0	3169.2	21.8
MSCI Emerging	1075.5	5.1	1023.7	7.0

The MSCI global equity index posted another strong year of gains, posting growth of 17.0% in 2024 following a 21.8% rise in 2023. However, individual jurisdictions saw markedly different paths. In the US, the S&P 500 index posted another strong year – the headline up 23.3% to end 2024 from 24.2%. The year saw some sector rotation, but tech stocks continued to perform strongly. Moreover, appreciation was broadly even across the year and made further gains after the election. By contrast, European equities continued to rise in early 2024, but broadly flatlined from Q2 as economic growth slowed. The Eurostoxx 50 index posted gains of just 8.3% over the year as a whole, compared to 19.2% gains to end-2023. In France, the performance of the CAC 40 was worse, stocks suffering under the political and fiscal uncertainty surrounding the mid-year election, which saw markets fall from highs made in May. The French index fell by 2.2% to end-2024 from a 16.5% gain across 2023. The UK's FTSE 100 index mirrored broader European stock gains – effectively levelling off from March. The FTSE 100 index rose by 5.7% to end-2024 compared with a 3.8% rise in 2023. Asia also saw mixed performance. The Japanese Nikkei 225 index posted gains of 19.2% across 2024 following strong 28.2% gains, the index supported by the renewed weak value of the yen boosting the impact of overseas earnings. By contrast, China's CSI 300 recovered somewhat from the 11% drop in 2023, rising by 16.5% over 2024. In total, the MSCI emerging market index rose by 5.1% following gains of 7.0% in 2023.

Directors' Report

The financial markets through 31 December 2024 (continued)

Bond Markets

(Government bonds in % or basis points (bps))	31-Dec-2024	31-Dec-2024 / 31-Dec-2023	31-Dec-2023	31-Dec-2023 / 31-Dec-2022
10Y French bond	3.12	+63 bps	2.47	-54 bps
10Y German bond	2.36	+33 bps	2.00	-53 bps
10Y Swiss bond	0.23	-82 bps	0.70	-30 bps
10Y Italian bond	3.42	-18 bps	3.53	-98 bps
10Y UK bond	4.57	+103 bps	3.60	-13 bps
10Y Japanese bond	1.08	+46 bps	0.62	-21 bps
10Y US bond	4.57	+70 bps	3.87	+3 bps

Bond markets have generally seen yields higher over 2024 in the US, Europe and Japan, and fall in China. In the US, after a combination of inflation, fiscal and policy rate concerns saw 10-year Treasury yields peak at 5% in 2023, yields have fallen back reaching a low of 3.62% in September - still above 2023's lows - after an unusual 50bps starting rate cut and dovish guidance from the Federal Reserve. A stronger economy and stickier inflation saw the Fed revise its guidance later in the year. Combined with the election of Donald Trump as US President, yields closed the year at 4.57%, 70bps higher than end-2023. German yields softened in early H2 2024 reflecting weak growth conditions, but the collapse of the coalition government and impending fresh elections raised concerns about fiscal easing, which saw yields rise to close 2024 at 2.36%, up 36bps from end-2023. This despite expectations for ECB policy easing accelerating in the final months of the year. French OAT yields rose by more, up 66bps to 3.12% by year-end as the government formed after President Macron's surprise mid-year elections fell and the 2024 deficit was expected around 6% of GDP. However, Italian BTP yields fell by 11bps to 3.42%. UK gilt yields had followed a similar path to broader European yields until October when the new Labour government's first Budget surprised with marked fiscal loosening reawakening concerns over the UK public finances. Gilt yields rose by 97bps to 4.57% by end-2024. Further afield, key Asian yields witnessed divergent trends. Increasing confidence that Japan had escaped its deflationary battle saw the Bank of Japan raise the policy rate and signal further tightening ahead. This saw the Japanese 10-year rise by 46bps to year-end to close at 1.08%. In China, increasing concerns about a debt-deflation trap have seen yields fall 82bps over the year as a whole to close 2024 at 1.77%.

Credit spreads continued to tighten through 2024 across jurisdictions and credit quality. In the US spreads have continued to narrow to their tightest levels since pre-2007, below post-pandemic tights. This saw a further 22bps narrowing in US investment grade (IG) spreads to just 0.82% at the end of 2024, having fallen by 34bps in 2023. High yield (HY) spreads narrowed 42bps to 2.92%, following a steep 145bps fall in 2023. European credit has narrowed more sharply still. In IG, spreads narrowed by 34bps in 2024 to 1.01% (after 31bps last year), while high yield narrowed 84bps to 3.11% (after 99bps last year).

Directors' Report

The financial markets through 31 December 2024 (continued)

Exchange Rates

(for €1)	End of Period Exchange Rate		Average Exchange Rate	
	31-Dec-2024	31-Dec-2024 / 31-Dec-2023	2024	2024 / 2023
US Dollar	1.04	-6.3	1.08	-0.3
British Pound Sterling	0.83	-4.6	0.84	-2.7
Swiss Franc	0.94	0.9	0.95	-1.9
Japanese Yen	162.7	4.5	163.8	7.1

The dollar had been broadly steady against a basket of currencies through 2023 and most of 2024. However, from end-September it posted significant gains against most currencies through a combination of resilient US economic momentum, a revision of US interest rate expectations and the US election. The dollar rose to two-year highs against a basket of currencies, including the euro and remained elevated against the Japanese Yen and Chinese yuan. The euro fell by 6.3% to \$1.036 by end-2024, sterling also slipped 1.8% to the dollar to \$1.252 and the yen fell by 10% to ¥157.2. Beyond dollar strength, the euro came under pressure as weaker growth and fading inflation allowed the ECB to ease policy at a faster pace. In euro terms, the euro fell by 4.6% to the British pound (to £0.827), which remained supported by expectations of less monetary loosening from the Bank of England, but gained 4.5% to the Japanese yen (to ¥162.7), which remained weak given expectations of only limited increases from the Bank of Japan.

Main SICAV's events during the year ending 31 December 2024

We inform you that the assets under management of the SICAV amount to EUR 36,412,852,964 as at 31 December 2024.

I. Creation and launch of a sub-fund

AXA World Funds - Global Dynamic Allocation. This new Sub-Fund was launched on 22 March 2024.

The objective of the Sub-Fund is to seek growth of investors' investment in the long term, in USD, together with stable income, by mainly investing through UCITS and other UCIs targeting a diversified number of asset classes globally. The Sub-Fund will be actively managed without reference to any benchmark.

AXA World Funds - AXA SPDB China A Opportunities. This new Sub-Fund was launched on 7 August 2024.

The objective of the Sub-Fund is to seek long-term growth of investors' investment, in CNH, from an actively managed portfolio investing in the A-Share equity markets of the People's Republic of China (PRC). The Sub-Fund will be actively managed and will seek to achieve its investment objective by mainly investing in equities of companies that are listed in the PRC and are part of the CSI 300 index universe.

AXA World Funds - Global Income Generating Assets. This new Sub-Fund was launched on 11 December 2024.

The objective of the Sub-Fund is to seek both regular income and growth of investors' investment in the medium-term, in USD, through asset class diversification. The Sub-Fund will be actively managed without reference to any benchmark and will seek to achieve its investment objective by investing in equities, including high dividend equities, bonds of any type and credit rating or unrated, including high yield bonds.

AXA World Funds - Global Sustainable Equity. This new Sub-Fund was launched on 17 December 2024.

Directors' Report

Main SICAV's events during the year ending 31 December 2024 (continued)

The objective of the Sub-Fund is to seek long-term growth, in USD, from an actively managed listed equity and equity-related securities portfolio, and to apply an ESG approach. The Sub-Fund will be actively managed in order to capture opportunities in the equities markets, by mainly investing in equities of companies that are part of the MSCI World Total Return Net benchmark index universe.

II. **Renaming of sub-funds**

On 2 July 2024:

From AXA World Funds - Euro 10 + LT into AXA World Funds - Euro Long Duration Bonds

From AXA World Funds - Metaverse into AXA World Funds - AI & Metaverse

On 27 December 2024:

From AXA World Funds - US Responsible Growth into AXA World Funds - US Growth

III. **Liquidation of sub-funds**

AXA World Funds - ACT Plastic & Waste Transition Equity QI has been liquidated on 10 April 2024. This Sub-Fund was launched on 4 August 2022.

AXA World Funds - ACT Social Bonds has been liquidated on 25 November 2024. This Sub-Fund was launched on 31 January 2022.

AXA World Funds - ACT US Corporate Bonds Low Carbon has been liquidated on 30 December 2024. This Sub-Fund was launched on 25 October 2016.

IV. **Dormant sub-fund**

Deletion of the following Sub-Fund:

ACT Global High Yield Bonds Low Carbon Sub-Fund was not launched within 18 months following its creation. As a consequence, it has been decided to remove it from the Prospectus.

V. **Merger of sub-funds**

AXA World Funds - Global Sustainable Credit Bonds Sub-Fund merged into the sub-fund AXA World Funds - Global Responsible Aggregate on 5 April 2024.

AXA World Funds - Asian High Yield Bonds sub-fund merged into the Sub-Fund AXA World Funds - Asian Short Duration Bonds on 26 April 2024.

Directors' Report

Main SICAV's events during the year ending 31 December 2024 (continued)

VI. Composition of the Board of Directors

We remind you that (i) Mr. Matthias Gardin resigned as Director of the SICAV on 8 March 2024 and (ii) Mr. Emmanuel Dendauw has been co-opted on 11 March 2024 as Director of the SICAV. The approval of the Luxembourg Regulatory Authority (the "CSSF") was received on 9 April 2024.

Consequently, your Board of Directors is composed, as at 31 December 2024 as follows:

Geoffroy Reiss, Chairman

Martin Burke

Emmanuel Dendauw

Jean-Louis Laforge

Matthieu Tonneau

The Board of Directors

3 April 2025

Note: the figures stated in this report are historical and not necessarily indicative of future performance.

Audit report

To the Shareholders of
AXA World Funds

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of AXA World Funds (the “Fund”) and of each of its sub-funds as at 31 December 2024, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund’s financial statements comprise:

- the statement of net assets as at 31 December 2024;
- the statement of operations and changes in net assets for the year then ended;
- the schedule of investments and other net assets as at 31 December 2024; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the “Commission de Surveillance du Secteur Financier” (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the “Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;

- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds (except for AXA World Funds - ACT European High Yield Bonds Low Carbon where a decision to liquidate exists) to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and communicate to them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

Notes to the Financial Statements as at 31 December 2024

Note 1: General

a) SICAV's details

AXA World Funds (the "SICAV") is a Luxembourg domiciled SICAV with multiple Sub-Funds organised as a "Société d'Investissement à Capital Variable" under the law of 10 August 1915 of the Grand Duchy of Luxembourg, as amended, (the "1915 law"). The SICAV is qualified under Part I of the law of 17 December 2010 (the "Law") on undertakings for collective investment for transferable securities ("UCITS"), as amended. The VAT number is LU 216 82 319.

The Board of Directors of the SICAV has confirmed its adherence to the ALFI's Code of conduct and to the standards of corporate governance described in this code.

The Management Company of the SICAV is AXA Investment Managers Paris, a public limited liability company (société anonyme à conseil d'administration), having its registered office at Tour Majunga la Défense 9 – 6 place de la pyramide 92800 Puteaux France, registered under the Nanterre Register of Trade and Companies under number 353 534 506, with a share capital of EUR 1,654,406, approved as a portfolio management company by the French Financial Markets Authority (Autorité des Marchés Financiers) under number GP92008 and licensed as an alternative investment fund manager.

The share classes presented below correspond to the different type of classes currently available in the SICAV.

Class "A" Shares

Class "A" shares (including A FXO) are for all investors.

Class "AX" Shares

Class "AX" shares are only offered to AXA Group.

Class "BE" Shares

BE share classes are only available through distributors based in Italy that entered into specific distribution arrangements with the Management Company subject to a Contingent Deferred Sales Charge ("CDSC"). Only available through distributors that entered into specific distribution arrangements with the Management Company subject to a Contingent Deferred Sales Charge ("CDSC").

Class "BL" Shares

BL share classes are for all investors. Only available through distributors that entered into specific distribution arrangements with the Management Company subject to a Contingent Deferred Sales Charge ("CDSC").

Class "BR" Shares

BR share classes are only offered to funds domiciled in Brazil.

Class "BX" Shares

BX share classes of the Sub-Funds AXA World Funds - Global Optimal Income and AXA World Funds - Euro Bonds are dedicated to AXA Luxembourg Fund's shareholders following the merger effective on 12 December 2014.

Notes to the Financial Statements as at 31 December 2024

Note 1: General (continued)

d) Share Classes List (continued)

Class “E” Shares

Class “E” shares are for all investors.

On top of the annual management fee, an annual distribution fee is charged to E shares accordingly depending on the concerned Sub-Fund (from 0.25% up to 1.00% of the Net Asset Value of class E shares). Shareholders cannot convert Class “E” Shares into another share class in the same or a different Sub-Fund without the prior approval of the SICAV.

Class “F” Shares

Class “F” shares are only offered (i) through financial intermediaries which according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions, and/or (ii) to Institutional investors investing on their own behalf.

Class “G” Shares

Class “G” Shares are for all investors. Class “G” Shares are only available through (i) certain distributors who have separate fee arrangements with their clients and (ii) to other investors at the Management Company’s discretion.

Class “G” Shares will be closed to subscriptions the day after the threshold of 100,000,000 in the share class currency is reached or exceeded. However, the SICAV reserves the right to close such “G” Share Class to subscriptions before the threshold of 100,000,000 in the share class currency is reached.

By exception, the threshold in all the Class “G” Shares currencies of AXA World Funds – US Enhanced High Yield Bonds is set at 150,000,000.

Class “I” Shares

The Directors reserve the right to issue Class “I” shares (including I FXO) at their sole discretion. Class “I” shares are only offered to Institutional investors investing directly or indirectly on their own behalf and/or financial intermediaries providing discretionary portfolio management service.

Class “J” Shares

The Directors reserve the right to issue Class “J” shares at their sole discretion. Class “J” shares are only offered to Institutional investors who are resident in Japan.

Class “L” Shares

Class “L” Shares are only offered through financial intermediaries in the United Kingdom which according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions.

Class “M” Shares

Class “M” shares are only offered with the prior approval of the Board and (i) held by AXA Investment Managers or its subsidiaries for use in institutional mandates or investment management agreements for a dedicated fund contracted with the AXA Group or (ii) held by Institutional Investors investing directly or indirectly on their own behalf and/or to financial intermediaries providing discretionary portfolio management service.

Class “N” Shares

Offered only to distributors based in the Americas (South and North America regions, including the United States).

Notes to the Financial Statements as at 31 December 2024

Note 1: General (continued)

d) Share Classes List (continued)

Class “SP” Shares

Class “SP” shares are only offered to the employees’ savings funds managed by the AXA Group.

Class “T” Shares

Class “T” shares are only offered to Taiwan distributors and to Taiwan investors.

Class “U” Shares

Class “U” shares are only offered to distributors based in the Americas (South and North America regions, including the United States).

Class “UA” Shares

Offered only through larger financial intermediaries belonging to a financial group with a predominance of its business in the US and which are expressly prior authorized by the Management Company.

Class “UF” Shares

Class “UF” shares are offered only through larger financial intermediaries belonging to a financial group with a predominance of its business in the US and which (i) are expressly prior authorized by the Management Company and (ii) according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions.

Class “UI” Shares

Class “UI” shares are offered only to larger institutional investors investing directly or indirectly on their own behalf and/or as part of providing discretionary portfolio management services, where such investor belongs to a financial group with a predominance of its business in the US and which are expressly prior authorized by the Management Company.

Class “X” Shares

Class “X” shares are for larger Institutional Investors investing directly or indirectly on their own behalf and/or financial intermediaries providing discretionary portfolio management service and with a high amount of minimum initial subscription.

Class “ZD” Shares

Only offered through digital platforms which are large startups providing financial services to their clients via a mobile application and which are expressly authorized by the Management Company.

Class “ZF” Shares

Class “ZF” shares are only offered through larger financial intermediaries which (i) are expressly prior authorized by the Management Company and (ii) according to either regulatory requirements or separate fee arrangements with their clients, are not allowed to keep trail commissions.

Class “ZI” Shares

Class “ZI” shares are for larger Institutional Investors investing directly or indirectly on their own behalf and/or financial intermediaries providing discretionary portfolio management service.

Notes to the Financial Statements as at 31 December 2024

Note 1: General (continued)

d) Share Classes List (continued)

Capitalisation and Distribution Shares

Share classes can be further divided into Capitalisation Shares and Distribution Shares. These shares differ by their distribution policies, the first by accumulating income, and the other by distributing dividends. The assets of these two categories are gathered together.

Redex (Reduction of Duration Exposure) Classes of Shares

The underlying investment objective of the redex share classes is, as for the other share classes of the Sub-Funds, to achieve the investment objective of the Sub-Fund, while, only in the case of the relevant share class to mitigate the Fund's exposure to an increase or decrease of interest rates curves. Such an overlay strategy will be managed through the tracking of listed derivatives.

To the extent applicable, the SICAV is allowed, for the purposes of the Redex Classes of Shares to invest in the following financial instruments traded on regulated or OTC markets:

- Listed or OTC futures,
- Repurchase agreements, and
- Securities lending.

Following the opinion of the ESMA 34-43-296 on share classes of UCITS (the "Opinion"), the Directors ruled that the Redex share classes do not comply with the principles set out in the Opinion. In addition they do not intend to convert the Redex share classes in other share classes available. As a consequence, the Directors have further decided to close for subscription from any new investor the Redex share classes as from 31 July 2017 and to close for subscription to any investor, including existing investors, such share classes as from 31 July 2018.

Share classes denominated "Hedged"

Any Sub-Fund can issue any Share Class in currency hedged form, meaning that the hedged version of the Share Class is denominated in a currency that is different from the Sub-Fund's Reference Currency, and is hedged to that currency (with the exception of BR Share Classes that offer currency exposure to the BRL). The currency risk between the Sub-Fund's Net Asset Value and the currency of the hedged Share Class will be hedged at least at 95%. Hedged Share Classes are designated with a "Hedged".

All costs specifically associated with offering each hedged Share Class such as currency hedging and foreign exchange costs will be charged to that Share Class.

If investors invest in a hedged Share Class, they could experience losses from currency exchange fluctuations to the extent that the Share Class' hedging is incomplete, and they will give up any potential gains from currency exchange fluctuations to the extent that hedging is effective.

e) Seed Money from AXA Group

Shares of a Sub-Fund may be held either by a French fund in which AXA Investment Managers is a majority shareholder (hereinafter the "AXA IM Fund") or by companies which are part of the AXA group of companies or by investment funds which are managed by investment management companies in which AXA IM group directly or indirectly holds a shareholding ("AXA IM Group Managed Funds") for the purposes of building a track record or a specific marketing action on the Sub-Fund.

Notes to the Financial Statements as at 31 December 2024

Note 1: General (continued)

e) Seed Money from AXA Group (continued)

AXA IM Fund and/or companies of the AXA IM group and/or AXA IM Group Managed Funds may, at any time, choose to redeem their Shares in the Sub-Fund which may result in a material decrease in the total assets of the Sub-Fund and/or a restructuring of the Sub-Fund including but not limited to restructuring causing the winding up of the Sub-Fund or its merger with another fund. Specific rules have been established by the Management Company with a view to preserve an equal treatment between the Shareholders of the Sub-Fund and will be applied in such case.

The foregoing does not prevent Shares of a Sub-Fund from being held by other investors including external seed investors.

f) Distribution

Distribution Shares may pay a dividend to their holders. In such case, dividends shall be paid out of the investment income gains and/or realised capital gains, or out of any other funds available for distribution. No Sub-Fund will make a dividend payment if the assets of the SICAV are below the minimum capital requirement, or if paying the dividend would cause that situation to occur.

Note 2: Significant Accounting Policies

a) Presentation of the Financial Statements

The Financial statements have been prepared on a going-concern basis of accounting, except for the sub-funds which have been liquidated during the year ended 31 December 2024. As such, the financial statements for these sub-funds have been prepared on a non-going concern basis.

At 31 December 2024, the total of cross Sub-Funds' investments amounts to EUR 118,086,430 and therefore total combined Net Asset Value at the end of the year without cross-investments would amount to EUR 36,294,766,534.

b) Foreign Currency Translation

The accounting records and the financial statements are denominated in the reference currencies of each Sub-Fund.

Transactions in currencies other than that in which the Sub-Fund is denominated are converted into the respective currency of the portfolio based on the exchange rate in effect at the date of the transaction.

Assets and liabilities denominated in other currencies are converted into the respective currency of the Sub-Fund at the last available rate of exchange at each balance sheet date.

Notes to the Financial Statements as at 31 December 2024

Note 2: Significant Accounting Policies (continued)

b) Foreign Currency Translation (continued)

For all AXA World Funds Sub-Funds, the exchange rates applied for the Net Asset Value calculation are as detailed in the two tables below. The combined figures are based on 31 December 2024 rates.

31/12/2024								
1 EUR =	1.67245	AUD	1 EUR =	3.77300	ILS	1 EUR =	35.30537	THB

c) Combined Figures

The combined Statement of Net Assets and the combined Statement of Operations and Changes in Net Assets are expressed in EUR and are presented for information purposes only.

d) Valuation of Investments

The assets of the SICAV are valued as follows:

Liquid assets are valued at their face value with interest accrued; in the case of short-term instruments (especially discount instruments) with maturities of less than 90 days, the value of the instrument based on the net acquisition cost, is gradually adjusted to the repurchase price thereof while the investment return calculated on the net acquisition cost is kept constant. In the event of material changes in the market conditions, the valuation basis of the investment is adjusted to the new market yields.

Transferable securities which are admitted to an official exchange listing or dealt on another regulated market are valued at the closing price on such market. If the investments are listed or traded on several markets, the closing price at the market, which constitutes the main market for such investments, will be determining.

Transferable securities not admitted to an official listing nor dealt on another regulated market are valued at their last available market price.

Notes to the Financial Statements as at 31 December 2024

Note 2: Significant Accounting Policies (continued)

d) Valuation of Investments (continued)

Investments for which no price quotation is available or for which the price referred to first and third paragraphs above is not representative of the fair market value, are valued prudently and in good faith by the Board of Directors of the SICAV on the basis of their reasonably foreseeable sales prices.

Those investments are identified distinctly in the Schedule of Investments.

The financial statements are presented on basis of the Net Asset Value calculated on 31 December 2024, except for the following Sub-Funds for which the last published Net Asset Value is calculated on 30 December 2024:

- AXA World Funds - ACT Eurozone Equity
- AXA World Funds - Europe Real Estate
- AXA World Funds - Framlington Sustainable Eurozone
- AXA World Funds - Italy Equity
- AXA World Funds - Switzerland Equity
- AXA World Funds - UK Equity

e) Acquisition Cost of Investments

The acquisition cost of investments expressed in currencies other than the reference currency of the Sub-Fund is translated into the reference currency of the Sub-Fund on the basis of the exchange rates prevailing on the purchase date.

f) Realised Gains/(Losses) on Sales of Investments

Realised gains/(losses) on sales of investments are determined on the basis of the average cost of the investments sold.

g) Valuation of the Forward Foreign Exchange Contracts

Outstanding forward foreign exchange contracts are valued at the closing date using the forward rates of exchange applicable to the outstanding life of the contract. The Net unrealised appreciation/(depreciation) on forward foreign exchange contracts is included in the Statement of Net Assets.

h) Valuation of Financial Futures and Options

Outstanding futures contracts and exchange traded options contracts are valued at the closing date using the last available market price of the instrument. The Net unrealised appreciation/(depreciation) on open futures contracts is included in the Statement of Net Assets.

i) Valuation of Contracts for Difference

Contracts For Difference ("CFD") are valued on the basis of the difference between the price of their underlying on the valuation date and on the acquisition date. The Net unrealised appreciation/(depreciation) is included in the Statement of Net Assets.

Notes to the Financial Statements as at 31 December 2024

Note 2: Significant Accounting Policies (continued)

j) Valuation of Swap Agreements

A swap is an agreement that obliges two parties to exchange a series of cash flows at specified intervals based upon or calculated by reference to changes in specified prices or rates for a specified amount of an underlying asset. The payment flows are usually netted against each other, with the difference being paid by one party to the other. Risks may arise as a result of the failure of another party to the swap contract to comply with the terms of the swap contract. The loss incurred by the failure of a counterparty is generally limited to the net payment to be received by the SICAV, and/or the termination value at the end of the contract.

Therefore, the SICAV considers the creditworthiness of each counterparty to a swap contract in evaluating potential credit risk. Additionally, risks may arise from unanticipated movements in interest rates or in the value of the underlying securities or indices.

The SICAV entered into performance swap agreements pursuant to which the SICAV receives or pays interest on a notional amount and receives or pays the performance of the underlying index based on the same notional amount. The interest is accrued and the performance of the index is valued on a daily basis. The net receivable or payable amount is recorded in the Statement of Net Assets under the headings “Net unrealised appreciation on swap contracts” and “Net unrealised depreciation on swap contracts”.

The Swap Agreements are valued at fair market value as determined prudently and in good faith by the SICAV. All unrealised appreciation/(depreciation) are included in the Statement of Net Assets.

The different types of Swaps held by the SICAV and their specifics are as follows:

Credit Default Swaps (“CDS”) are bilateral financial contracts in which one counterparty (the protection buyer) pays a periodic fee in return for a contingent payment by the protection seller following a credit event of a reference issuer. The protection buyer acquires the right to sell a particular bond or other designated reference obligations issued by the reference issuer for its par value or the right to receive the difference between par value and market price of the said bond or other designated reference obligations (or some other designated reference or strike price) when a credit event occurs.

A Total Return Swap (“TRS”) is an agreement to exchange the total performance of a bond or other underlying asset (share, index, etc.) for a benchmark rate plus a spread. The total performance includes the interest coupons, dividends and profits and losses on the underlying asset over the life of the agreement, depending on the type of underlying concerned. The risk in this type of agreement is linked to the fact that the benefit for each counterparty will depend on how the underlying asset performs over time, which is unknown at the time at which the agreement is entered into.

Interest Rate Swaps (“IRS”) are swap agreements whereby parties exchange fixed income (sum of the notional amount and the fixed rate) for variable income (sum of the notional amount and the floating rate) and vice versa.

k) Dividend Income

Dividends are accounted for on an ex-dividend date basis, net of any irrecoverable withholding tax.

Notes to the Financial Statements as at 31 December 2024

Note 2: Significant Accounting Policies (continued)

l) Interest Income

Interest income is recognised on a daily accrual basis, net of any irrecoverable withholding tax (interest on investment portfolio, interest on deposits and interest on call accounts and security lending income). Interest income is disclosed net of any amortization.

m) Swing Pricing

If the net subscriptions and redemptions based on the last available Net Asset Value on any Valuation Day exceed a certain threshold of the value of a Sub-Fund or a Share Class on that Valuation Day, as determined and reviewed on a periodic basis by the Management Company, the Net Asset Value may be adjusted respectively upwards or downwards to reflect the dealing and other costs that may be deemed to be incurred in buying or selling assets to satisfy net daily transactions. The Management Company may apply a swing pricing mechanism across any Sub-Fund or Share Class. The extent of the price adjustment will be set by the Management Company and does not exceed 2% of the Net Asset Value.

During the year, the swing pricing mechanism was applied across all Sub-Funds.

n) Capital Gain Tax

Some governments exercise substantial influence over the private economic sector and investments may be affected by political and economic instability. In adverse social and political circumstances, governments have been involved in policies of expropriation, confiscatory taxation, nationalisation, intervention in the securities market and trade settlement and imposition of foreign investment restrictions and exchange controls, and these could be repeated in the future. In addition to withholding taxes on investment income, some markets may impose differential capital gain taxes on foreign investors. The related amounts are accounted as "Other payables" under the Statement of Net Assets.

Note 3: Taxation

The SICAV is a registered investment fund domiciled in Luxembourg and is, as a result, exempt from tax, except for subscription tax ("Taxe d'Abonnement"). Under current legislation and regulation, the SICAV is subject to a subscription tax calculated and payable quarterly on the Net Asset Value of the SICAV at the end of the respective quarter. The SICAV pays a tax rate equal to 0.05% for assets related to the shares reserved for retail investors. This tax is reduced to 0.01% for assets related to the shares reserved for institutional investors and/or for the cash and money market Sub-Funds.

The "Taxe d'abonnement" is waived for that part of the SICAV invested in units of other undertakings for collective investment that have already paid the "Taxe d'abonnement" in accordance with the statutory provisions of the Luxembourg law. This tax is part of the Applied Service Fees in the Financial Statements.

Note 4: Distribution Fees

The distribution fees are calculated as a percentage of the Net Asset Value per share class. As at 31 December 2024, the maximum distribution fees applied are the following:

	Distribution Fees

Notes to the Financial Statements as at 31 December 2024

Note 5: Management Fees

The Management Company is entitled to receive, from the assets of the relevant Sub-Funds, a management fee in an amount to be specifically determined for each Sub-Fund or share class. The annual management fee is calculated as a percentage of the Net Asset Value of each Sub-Fund. The details and the percentage of this fee, per share class, are described in the Full and Simplified Prospectuses and in the table presented hereinafter. This fee is calculated and accrued daily. The Management Company will remunerate the Investment Managers out of the management fee in accordance with the contracts signed with the different parties. The management fees are used in part to pay remuneration (trailer fees) for distribution activities concerning the Fund.

As at 31 December 2024, the rates are the following:

Retrocession on management fee levied on the assets invested in other UCITS or UCIs is calculated and accrued daily and refunded to each share class. This retrocession represents a partial discount or a full refund of the management fees levied by each underlying UCITS or UCIs.

As foreseen in the Prospectus, the Sub-Funds will not invest in underlying UCIs which are themselves submitted to a management fee exceeding 3%.

Notes to the Financial Statements as at 31 December 2024

Note 6: Performance Fees

For the below listed Sub-Funds and share classes, the Management Company is entitled to receive a performance fee in addition to the management fees, based on the Sub-Fund's performance in excess of the benchmark return, calculated as described in the Notes on Sub-Fund's Costs section of the prospectus or in the related Sub-Fund's appendices in the Prospectus dated November 2024.

As of 31 December 2024, the performance fee rates and the benchmarks are as follows:

BL Distribution monthly USD P	USD	17,024	0.13%
E Capitalisation EUR PF	EUR	1	0.00%
F Capitalisation EUR PF	EUR	1,518	0.17%
F Distribution EUR PF	EUR	19	0.00%
I Capitalisation EUR PF	EUR	30,357	0.03%

Note 7: Redex Fees

The Redex fees are payable to the Investment Manager in charge of the management of the Redex Class and calculated as a percentage of the net assets of the relevant Class.

The maximum annual fee linked to the reduction of the duration exposure of the Redex share classes applied is 0.05%.

Note 8: Withholding Tax Reclaim Income/Withholding Tax Reclaim Fees

The withholding tax reclaim income and fees are linked to the tax-reclaim processes. These income and fees are disclosed for each Sub-Fund in the Statement of Operations and Changes in Net Assets.

Notes to the Financial Statements as at 31 December 2024

Note 9: Applied Service Fee

In order to pay its ordinary operating expenses, the SICAV will pay an Applied Service Fee to the Management Company out of the assets of the relevant Share Class. To seek to protect the Shareholders from fluctuations in these ordinary operating expenses, the yearly total amount of these expenses to be charged to each Share Class by the Management Company (the "Applied Service Fee"), will be at a maximum level of 0.50% of the Net Asset Value in respect of each Share Class (the "Maximum Level"). The level of effective Applied Service Fee might be set out below this Maximum Level with different fixed effective Applied Service Fee rates applicable across Share Classes. The level of the Applied Service Fee per Sub-Fund and per Share Class is defined taking into account different criteria such as, but not limited to, the costs charged to the Share Class and the variation of costs linked to a change of the Net Asset Value in respect of the relevant Share Class that might be due to market effects and/or dealing in shares.

By way of a resolution, the Directors (i) may modify in its sole discretion the level of effective Applied Service Fee and (ii), may amend at any time upon prior notice to relevant Shareholders, the Maximum Level of the Applied Service Fee applicable to all Share Classes.

The Applied Service Fee is fixed in the sense that the Management Company will bear the excess in actual ordinary operating expenses to any such Applied Service Fee charged to the Share Classes. Conversely, the Management Company will be entitled to retain any amount of Applied Service Fee charged to the Share Classes exceeding the actual ordinary operating expenses incurred by the respective Share Classes.

The effective Applied Service Fee is accrued at each calculation of the Net Asset Value and included in the ongoing charges of each Share Class disclosed in the relevant KIID.

In counterparty of the Applied Service Fee received from the SICAV, the Management Company then provides and/or procures, on behalf of the SICAV the following services and bears all expenses (including any reasonable out of pocket expenses) incurred in the day-to-day operations and administration of the Share Classes, including but not limited to:

- Depositary fees except transaction related fees;
- Auditor's fees;
- directors' fees and expenses, and remuneration of officers and employees of the SICAV: any director of the SICAV will be entitled to a fee in remuneration for his services as a director or in his capacity as a member of any committee of the Board;
- the Luxembourg 'Taxe d'abonnement';
- Share Class currency hedging cost;
- the fees of the registrar agent and administrator (including the calculation of the Net Asset Value), any paying agent and of any representatives in jurisdictions where the Shares are qualified for sale, and of all other agents employed on behalf of the SICAV; such remuneration may be based on the net assets of the SICAV or on a transaction basis or may be a fixed sum;
- the cost of preparing, printing and publishing in such languages as are necessary, and distributing offering information or documents concerning the SICAV (including shareholder notification), annual and semi-annual reports and such other reports or documents, as may be required under the applicable laws or regulations of the jurisdictions or the authorities where the Shares are qualified for sale;
- registrar's fees;
- the cost of printing certificates and proxies;

Notes to the Financial Statements as at 31 December 2024

Note 9: Applied Service Fee (continued)

- the cost of preparing and filing the Management Regulations and all other documents concerning the SICAV, including registration statements and offering circulars with all authorities (including local securities dealers' associations) having jurisdiction over the SICAV or the offering of Shares;
- the cost of qualifying the SICAV or the sale of Shares in any jurisdiction or of a listing on any stock exchange;
- the cost of accounting and bookkeeping;
- legal fees;
- the cost of preparing, printing, publishing and distributing public notices and other communications to the Shareholders;
- the cost of calculating the Net Asset Value of each Share Class;
- insurance, postage, telephone and telex and any communication mean;
- distribution and sales support costs (including costs charged by local routing order platforms, local transfer agent costs, local representative agent and the translation costs); and
- all similar charges and expenses.

Note 10: Soft Commissions

Since the new European regulation MIFID II came into force on 3 January 2018, the Equity CSAs that AXA IM had with brokers are no longer valid and are being replaced by new contracts with selected brokers aiming to cover the research needs of AXA IM front office teams. The cost of research is borne directly by AXA IM.

Also, regarding some compartments of the SICAV mainly invested in US High Yield. AXA IM may enter into arrangements with an independent third-party counterparty, in case of cross trade events, in line with AXA IM policies and procedures, as well as regulation. In such a case, soft dollar arrangement does not involve the payment of any direct commissions to the executing broker. Rather, a predetermined schedule of "commissions" has been documented and approved, which are then built into the prices of the cross trades.

Note 11: Transaction Fees

The transaction fees are disclosed for each Sub-Fund in the Statement of Operations and Changes in Net Assets under the caption "Transaction fees". Those fees are also detailed in the Additional Appendix.

Note 12: Futures

The unrealised appreciation/(depreciation) on futures is included in the Statement of Net Assets under the caption "Net unrealised appreciation/(depreciation) on open futures contracts".

Notes to the Financial Statements as at 31 December 2024

Note 12: Futures (continued)

Counterparty information

The sole counterparty for the Futures transactions as at 31 December 2024 is Goldman Sachs International with the following cash held at broker per Sub-Fund (those amounts are included in the Cash in Statement of Net Assets):

Sub-Fund's name	Currency of the Sub Fund	Type of collateral (Cash/Securities)	Total collateral (in Sub-Fund currency)

Note 16: Securities Lending

The SICAV may lend positions of its securities portfolio to third parties. In general, lending may only be effected via recognised clearing houses, or through the intermediary of prime financial institutions that specialise in such activities and where collateral is received as guarantee.

The Management Company did not receive any commissions on securities lending transactions.

Notes to the Financial Statements as at 31 December 2024

Note 16: Securities Lending (continued)

The Management Company has appointed AXA Investment Managers GS Limited as the stock lending and repurchase agent pursuant to a delegation agreement dated 15 February 2013. AXA Investment Managers GS and the management company are affiliates companies belonging to AXA IM group. In order to prevent any conflicts of interest and ensure Best Execution, AXA IM group has put in place a conflicts of interest policy and a Best Execution policy, details of which are available on <https://www.axa-im.com/our-policies-and-reports>, and which provides respectively that (i) conflict of interests are mitigated in maintaining appropriate analyses mechanisms, controls and in ensuring that Securities Lending Agent is kept separate from the Portfolio Manager teams and (ii) that best execution is ensured by not typically using the same execution venues for securities lending transactions as for other transactions to ensure that the particular characteristics of such Securities lending transactions are taking into account.

Any revenues from efficient portfolio management techniques will be returned to the SICAV, minus direct and indirect operational costs.

Direct operational cost is defined as the cost directly attributable to the implementation of EPM techniques (e.g. agent lender staff cost, trading platform cost, market data, custody and safekeeping costs, collateral management and SWIFT messaging costs).

Indirect cost is defined as the operational cost not directly attributable to the implementation of EPM techniques (e.g. insurance fee, premises and facilities).

Repurchase and reverse repurchase: 100% of the gross revenue generated by the repurchase (if any) and the reverse repurchase activities will benefit to the SICAV.

Securities lending: Each Sub-Fund pays 35 % of the gross revenues generated from securities lending activities as costs / fees to AXA Investment Managers GS Limited in its capacity of lending agent and retain 65% of the gross revenues generated from securities lending activities. All costs / fees of running the programme are paid from the lending agent's portion of the gross income (35%). This includes all direct and indirect costs / fees generated by the securities lending activities. AXA Investment Managers GS Limited is a related party to the Management Company and the Investment Manager of the Sub-Fund.

The accruals on securities lending income/expenses are booked daily in accounting and paid on a monthly basis.

Some sub-funds have been subject to adjustment on security lending Income accruals, from previous years , that have been registered in other expenses from the statement of Operations.

Please find below details on the market value of securities on loan and related collateral information as at 31 December 2024:

(1) The TERs above represent, as indicated in the prospectus, a weighted average of administrative expenses which shareholders could normally have expected to pay when being invested in the chosen share class as indicated in the prospectus. This methodology is in line with accepted standard market practices and represents a fair view of publications to be made in the market.

(2) Please refer to note 9 for more details on the Applied Service Fee.

(3) The Ongoing charges are based on historical expense data, as well as anticipated material budget changes for the period. For certain classes of shares and Sub-Funds where there is no relevant expense history, Ongoing charge figures are based on estimates. The figures represent the situation at 31 December 2024. The Ongoing charges calculation excludes the Performance fees.

Eligibility for the “Plan Epargne en Actions” (PEA and PEA/PME)

Owing to their eligibility for French share savings schemes “Plan d’épargne en actions” (PEA), the Sub-Funds of the AXA World Funds listed below permanently invest at least 75% of their net assets in securities and rights that are eligible for the PEA such as equities, equivalent securities, investment certificates and cooperative investment certificates issued by companies having their registered office in the European Economic Area.

The Sub-Fund AXA World Funds - Framlington Europe Ex-UK Microcap is being eligible to the French savings plan called “PEA/PME” meaning that the Sub-Fund is permanently invested for a minimum of 75% in securities or rights eligible to the PEA/PME issued by companies having their registered office in the European Economic Area, and complying with criteria indicated in Article L.221-32-2-2° of the French Monetary and Financial Code, of which a minimum of 50% is invested in equities or rights.

Please find below the PEA ratio as at 31 December 2024:	Market Value of European Economic Area securities	Market Value of European Economic Area securities (PME)
AXA World Funds - ACT Eurozone Equity	93.56%	-
AXA World Funds - Europe ex-UK Microcap	87.47%	80.91%
AXA World Funds - Framlington Sustainable Eurozone	95.88%	-
AXA World Funds - Italy Equity	100.30%	-

Additional Unaudited Appendix

Remuneration policy

According to regulatory requirements on remuneration disclosure applicable to asset management companies, this disclosure provides an overview of the approach on remuneration taken by AXA Investment Managers Paris (hereafter “AXA IM”). Further information on the composition of the Remuneration Committee and driving principles of the Remuneration Policy is available on AXA IM website: <https://www.axa-im.com/important-information/remuneration-policy>. A copy of this information is available upon request free of charge.

Governance - AXA IM’s Remuneration Policy, which is reviewed and approved by the AXA IM Remuneration Committee every year, sets out the principles relating to remuneration within all entities of AXA IM and takes into account AXA IM’s business strategy, objectives, and risk tolerance, as well as the long-term interests of AXA IM’s shareholders, clients and employees. The AXA IM Remuneration Committee, in line with the remuneration policies and procedures set and validated at AXA Group level, ensures consistency and fair application of the Remuneration Policy within AXA IM, as well as compliance with applicable regulations.

The central and independent review that the effective implementation of the AXA IM’s Remuneration Policy complies with the procedures and policies adopted by AXA IM Group level, is performed by the AXA IM Internal Audit Department, who presents each year its conclusions to the AXA IM Remuneration Committee to enable it to perform its diligences.

These conclusions did not mention any particular comments regarding the compliance of the effective implementation of the AXA IM’s Remuneration Policy.

The result of the annual exam by the AXA IM Remuneration Committee is presented to the Board of Directors of AXA IM along with the amendments implemented into the AXA IM’s Remuneration Policy.

These changes primarily relate to the global principles of the deferred remuneration policy, the removal of the allocation of AXA IM Performance Shares and AXA group stock options, a reminder of rules to ensure fair allocation of remuneration (neutrality in terms of sex, religion, age, sexual orientation, marital status, etc.) and the introduction of a section on the incorporation of sustainability risk in order to guarantee compliance with all regulations in force, in particular Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector and their alignment with sales and human resources strategies within the AXA Investment Managers Group.

The Global Remuneration Policy has been reviewed to factor the proposed deferral structure in and ensure compliance with all governing regulations and alignment with the AXA IM business and Human Resource strategies.

Remuneration policy (continued)

Quantitative information - Data provided below are those of AXA Investment Managers covering all subsidiaries of the AXA Investment Managers Group and types of portfolios as at 31 December 2024 after application on remuneration data of the Fund's weighted Asset Under Management allocation key.

Total amount of remuneration paid and/or awarded to staff for the year ended 31 December 2024, prorated to the Fund's assets ¹	
Fixed Pay ² ('000 EUR)	18,003.02
Variable Pay ³ ('000 EUR)	11,058.20
Number of employees ⁴	2,944

¹ Excluding social charges.

² Fixed Pay amount is based on Fixed Pay effective for all staff at AXA IM during the financial year under review prorated to the Fund's assets.

³ Variable Pay, prorated to the Fund's assets, composed of discretionary, upfront and deferred items, includes :

- Amounts awarded for the performance of the previous year and fully paid over the financial year under review (non-deferred variable pay);
- Amounts awarded for the performance of previous years and the performance of the year under review (deferred variable pay);
- Long-Term Incentives awarded by the AXA Group.

⁴ Number of employees includes Permanent and Temporary contracts excluding internship as at 31 December 2024.

Aggregate amount of remuneration paid and / or awarded to risk takers and senior management whose activities have a significant impact on the risk profile of portfolios, prorated to the Fund's assets ¹			
	Risk Takers	Senior Management	Total
Fixed Pay and Variable Pay ('000 EUR) ^{2,3}	5,824.08	3,914.30	9,738.39
Number of employees ⁴	294	101	395

¹ Excluding social charges.

² Fixed Pay amount is based on Fixed Pay effective for all staff at AXA IM during the financial year under review prorated to the Fund's assets.

³ Variable Pay, prorated to the Fund's assets, composed of discretionary, upfront and deferred items, includes:

- Amounts awarded for the performance of the previous year and fully paid over the financial year under review (non-deferred variable pay);
- Amounts awarded for the performance of previous years and the performance of the year under review (deferred variable pay);
- Long-Term Incentives awarded by the AXA Group.

⁴ Number of identified employees within AXA IM Group level and AXA IM as at 1 January 2024.

Risk Disclosures

Risk disclosure linked to CSSF circular 11/512

The commitment approach is used in the majority of AXA World Funds Sub-funds to calculate the global exposure, except for the following 6 Sub-funds for which an Absolute VaR method is used to measure the global exposure:

- AXA World Funds - Defensive Optimal Income
- AXA World Funds - Euro Credit Total Return
- AXA World Funds - Global Optimal Income
- AXA World Funds - Multi Asset Optimal Impact
- AXA World Funds - Optimal Income
- AXA World Funds - US Enhanced High Yield Bonds

Please find below the parameters, features and results for the year from 1 January 2024 to 31 December 2024:

Sub-fund name	Method to calculate the global exposure	Type of Model	Parameters (1)				VaR levels over the period		VaR levels with ESMA parameters (2)		Average Leverage level reached (3)
			Confidence interval	Horizon	Observation period	Limit	Max	Min	Max	Min	
AXA World Funds - Defensive Optimal Income	Absolute VaR	Monte Carlo	95%	5D	1 year	7.00%	Max	1.81%	Max	5.12%	69.70%
							Min	0.88%	Min	2.48%	
							Average	1.18%	Average	3.33%

Additional Unaudited Appendix

Securities Financing Transactions Regulation ("SFTR") Disclosures

Foreword

The SICAV may lend positions of its securities portfolio to third parties through different techniques whereas:

- Bilateral should be understood as trading executed directly with the counterparty and the collateral, managed by AXA Investment Managers GS Limited, is safe-kept at State Street Luxembourg S.C.A..
- Triparty should be understood as trading executed directly with the counterparty and collateral managed by a triparty agent who manages and safe-keep the collateral.
- CCP should be understood as Central Counterparties Clearing House.

Data on cost and return

The return from securities lending transactions is split between the relevant Fund and the agent lender. The Funds receive 65% while the agent lender receive 35% of the income, with all operational costs supported by the agent lender. The income earned by the Funds from securities lending transactions is disclosed in the Securities lending note (note 16).

Eligible collateral

Collateral received by a Sub-Fund may be used to reduce its counterparty risk exposure with a counterparty if it complies with the criteria listed in circulars issued by the CSSF from time to time in terms of liquidity, valuation, issuer credit quality, correlation, risks linked to the management of collateral and enforceability. In particular, collateral should comply with the following conditions:

- Any collateral received other than cash should be of high quality, highly liquid and traded on a regulated market or multilateral trading facility with transparent pricing in order that it can be sold quickly at a price that is close to pre-sale valuation.
- It should be valued on a daily basis on a mark-to-market price basis and assets that exhibit high price volatility should not be accepted as collateral unless suitably conservative haircuts are in place. Margin calls will be implemented in accordance with the terms negotiated in the collateral arrangements.
- It should be issued by an entity that is independent from the counterparty and is expected not to display a high correlation with the performance of the counterparty.
- It should be sufficiently diversified in terms of country, markets and issuers and shall not entail on an aggregate basis an exposure to a given issuer for more than 20% of its Net Asset Value. By way of derogation, a Sub-Fund may be fully collateralised in different Transferable Securities or Money Market Instruments issued or guaranteed by any of the Member States, one or more of their local authorities, a third party sovereign country such as Canada, Japan, Norway, Switzerland and the United States of America, or any public international body to which one or more Member State(s) belong(s) such as the European Investment Bank, provided that it receives such securities from at least six different issues and that securities from any single issue should not account for more than 30% of such Sub-Fund's Net Asset Value. The collateral shall further comply with the limits set forth above under section "b) Limitations on Control".
- The financial guarantees received by the Sub-Fund will be kept by the Depositary or, failing that, by any third-party depositary (such as Euroclear Bank SA/NV) which is subject to a prudential supervision and that has no link with the guarantee provider. It should be capable of being fully enforced by the SICAV for the account of the Sub-Fund at any time without reference to or approval from the counterparty.

Securities Financing Transactions Regulation ("SFTR") Disclosures (continued)

Foreword (continued)

Eligible assets

As long as it complies with the above-mentioned conditions, the collateral may consist of (i) sovereign OECD bonds; and/or (ii) direct investment in bonds issued or guaranteed by first class issuers offering an adequate liquidity or shares listed or dealt on a Regulated Market of a Member State of the European Union or on a stock exchange of a member state of the OECD provided that they are included in a main index.

Sustainable Finance Disclosure Regulation (“SFDR”) Disclosures

The Sub-Fund listed below is a financial product that neither promotes environmental and/or social characteristics nor has a sustainable investment objective within the meaning of the articles 8 and 9 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial sector.

Nevertheless, it follows sectorial exclusion policies covering controversial weapons, soft commodities, climate risks, and ecosystem protection & deforestation. In 2022, AXA IM extended this policy to cover investments incorporating significant land use controversies and responsible for biodiversity loss in relation to soy, cattle and timber.

AXA World Funds - Global Dynamic Allocation
AXA World Funds - Global Income Generating Assets
AXA World Funds - US Dynamic High Yield Bonds

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Biodiversity
(the “Financial Product”)

Legal Entity Identifier: 213800NEL6BAVXHBH781

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 53.21%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 44.45%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Product & services score on SDG 2, 6, 12, 14, 15

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value	Benchmark	Coverage
Product & services score on SDG 2, 6, 12, 14, 15	2.23 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))		100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of quarter of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Product & services score on SDG 6, 12, 14, 15	2023	1.33 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))		
Product & services score on SDG 6,12, 14, 15	2022	1.64 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	-0.13 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	94.54 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 5182.994 Scope 2: 1150.879 Scope 3: 80891.195 Scope 1+2: 6333.873 Scope 1+2+3: 86183.438	Scope 1: 86 Scope 2: 86 Scope 3: 83 Scope 1+2: 86 Scope 1+2+3: 83	Scope 1: 88 Scope 2: 88 Scope 3: 85 Scope 1+2: 88 Scope 1+2+3: 85

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

		applicable, national law		
--	--	--------------------------	--	--

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets																																										
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 5182.994	Scope 1: 86 Scope 2: 86 Scope 3: 83 Scope 1+2: 86 Scope 1+2+3: 83	Scope 1: 88 Scope 2: 88 Scope 3: 85 Scope 1+2: 88 Scope 1+2+3: 85

Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

Largest investments	Sector (NACE level 2)	% Assets	Country
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	3.96%	US
ECOLAB INC XNYS USD	Manufacture of chemicals and chemical products	3.94%	US
XYLEM INC XNYS USD	Manufacture of machinery and equipment n.e.c.	3.88%	US
SAP SE XETR EUR	Publishing activities	3.62%	DE
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	3.43%	US
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	3.37%	US
ARCADIS NV XAMS EUR	Architectural and engineering activities, technical testing and analysis	3.36%	NL
AECOM XNYS USD	Architectural and engineering activities, technical testing and analysis	3.16%	US
AUTODESK INC XNGS USD	Publishing activities	3.08%	US
GEA GROUP AG XETR EUR	Manufacture of machinery and equipment n.e.c.	2.99%	DE
HALMA PLC XLON GBP	Manufacture of computer, electronic and optical products	2.95%	GB
AMERICAN WATER WORKS CO INC XNYS USD	Water collection, treatment and supply	2.94%	US
NOVONESIS (NOVOZYMES) B XCSE DKK	Manufacture of chemicals and chemical products	2.8%	DK
BALL CORP XNYS USD	Manufacture of fabricated metal products, except machinery and equipment	2.8%	US
KADANT INC XNYS USD	Manufacture of machinery and equipment n.e.c.	2.77%	US

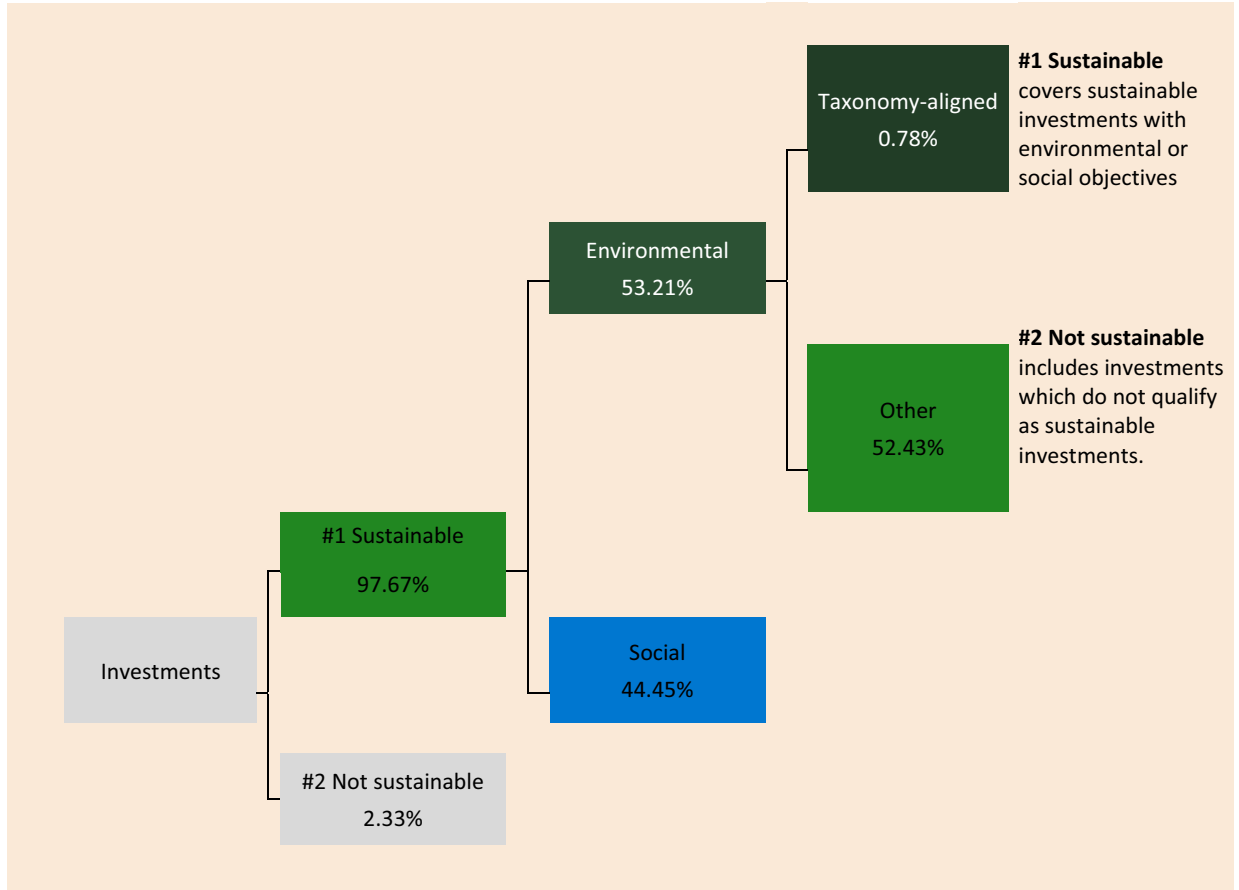

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	23.45%
Manufacture of machinery and equipment n.e.c.	20.48%
Publishing activities	13.48%
Manufacture of chemicals and chemical products	11.15%
Waste collection, treatment and disposal activities, materials recovery	9.19%
Architectural and engineering activities, technical testing and analysis	8.94%
Water collection, treatment and supply	2.94%
Manufacture of fabricated metal products, except machinery and equipment	2.8%
Other	2.34%
Manufacture of rubber and plastic products	2.16%
Insurance, reinsurance and pension funding, except compulsory social security	1.47%
Manufacture of paper and paper products	0.87%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of s	0.5%
Other personal service activities	0.25%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

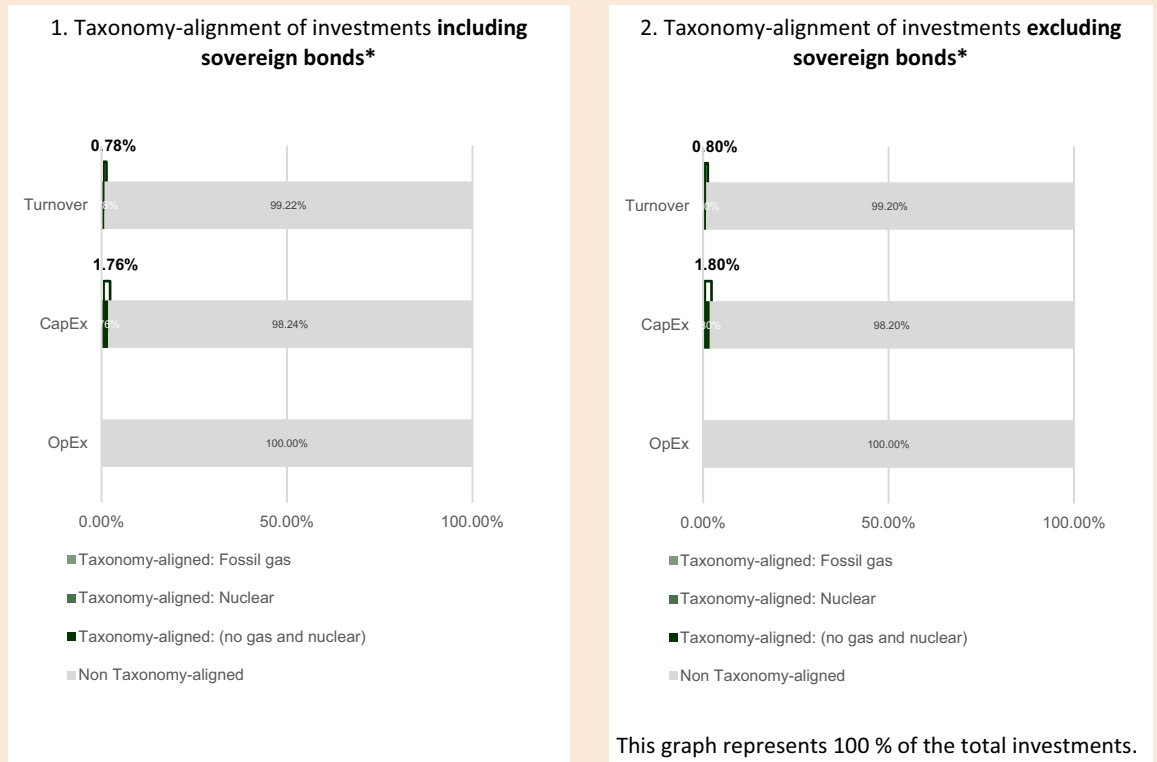

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules. **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are economic activities** for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	0.78%	0.00%	0.00%
CapEx-based	1.76%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 52.43% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 44.45 % of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 2.33% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Clean Economy (the “Financial Product”)

Legal Entity Identifier: 213800YSFEN3TI97J121

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 59.11%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 37.79%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Renewable Energy Production
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Renewable Energy Production	83.26 of megawatt hours of renewable energy produced per million euros invested using the EVIC	29.63 of megawatt hours of renewable energy produced per million euros invested using the EVIC	92.74 %
Women on Board	33.53 % of women on board (for corporates only)	33.99 % of women on board (for corporates only)	99.14 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Renewable Energy Production	2023	94.14 of megawatt hours of renewable energy produced per million euros invested using the EVIC		
% of companies in the GSS Watchlist & Non-compliant	2023	7.18 % of invested companies in the GSS Watchlist & Non-compliant	10.67 % of invested companies in the GSS Watchlist & Non-compliant	97.03 %
Carbon Delta Technology Opportunity (1.5C)	2022	24.65 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	4.27 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	97.96 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA

IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 4775.083 Scope 2: 1605.082 Scope 3: 125331.094 Scope 1+2: 6380.165 Scope 1+2+3: 131711.25	Scope 1: 85 Scope 2: 85 Scope 3: 85 Scope 1+2: 85 Scope 1+2+3: 85	Scope 1: 87 Scope 2: 87 Scope 3: 87 Scope 1+2: 87 Scope 1+2+3: 87

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 4775.083	Scope 1: 85 Scope 2: 85 Scope 3: 85 Scope 1+2: 85 Scope 1+2+3: 85	Scope 1: 87 Scope 2: 87 Scope 3: 87 Scope 1+2: 87 Scope 1+2+3: 87

Source: S&P Trucost, 2024

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	3.93%	US
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	3.63%	FR
EATON CORP PLC XNYS USD	Manufacture of electrical equipment	3.47%	US
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	3.42%	US
LINDE PLC XNGS USD	Manufacture of chemicals and chemical products	3.35%	US
AECOM XNYS USD	Architectural and engineering activities, technical testing and analysis	3.2%	US
AUTODESK INC XNGS USD	Publishing activities	3.19%	US
WASTE MANAGEMENT INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	3.17%	US
ANSYS INC XNGS USD	Publishing activities	3.14%	US
NEXTERA ENERGY INC XNYS USD	Electricity, gas, steam and air conditioning supply	3.07%	US
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	3.03%	NL
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.84%	GB
EQUINIX INC XNGS USD	Real estate activities	2.79%	US
TOYOTA MOTOR CORP XTKS JPY	Manufacture of motor vehicles, trailers and semi-trailers	2.68%	JP
TAIWAN SEMICONDUCTOR-SP ADR XNYS USD	Manufacture of machinery and equipment n.e.c.	2.68%	TW

The portfolio proportions of investments presented above are an average over the reference period.

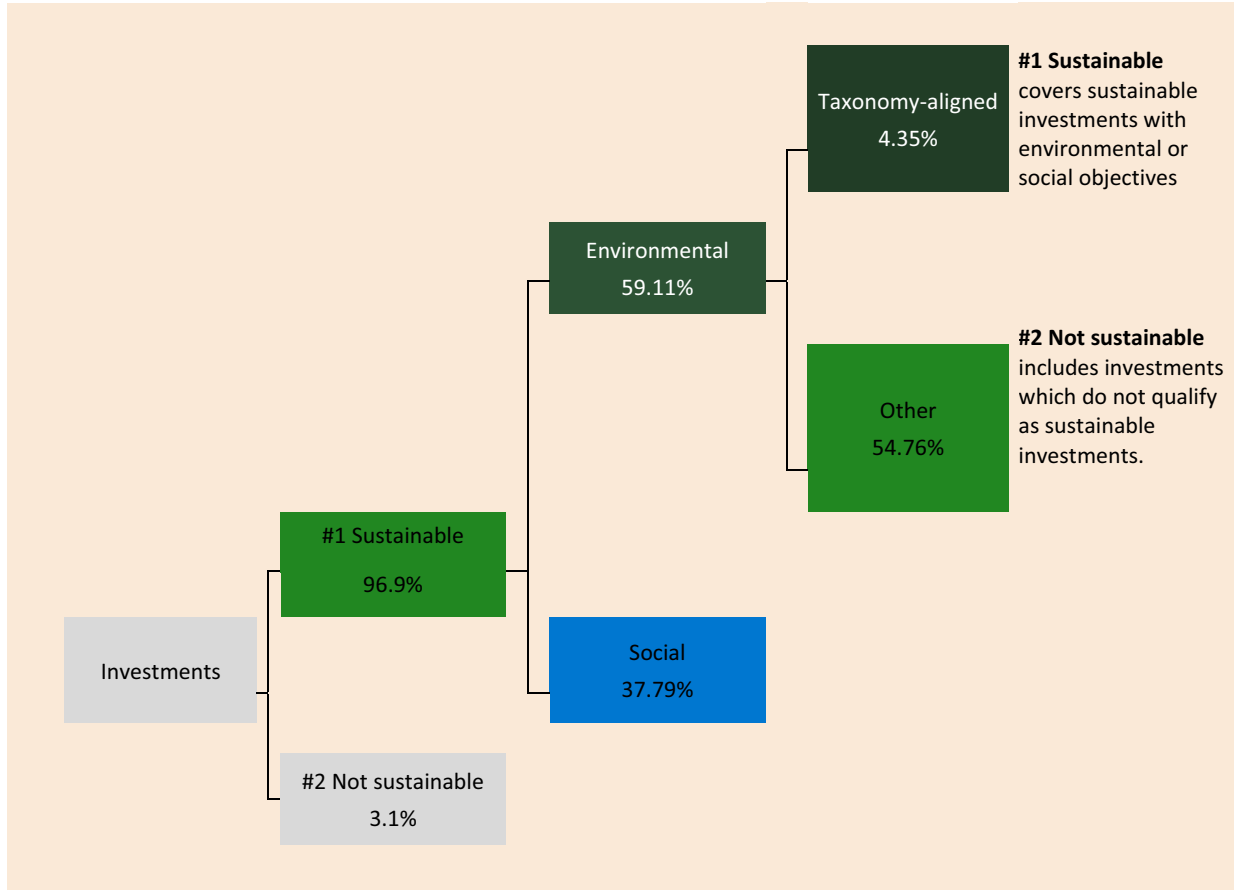

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	15.03%
Manufacture of machinery and equipment n.e.c.	13.32%
Manufacture of electrical equipment	13.05%
Manufacture of computer, electronic and optical products	11.3%
Electricity, gas, steam and air conditioning supply	10.95%
Architectural and engineering activities, technical testing and analysis	6.11%
Waste collection, treatment and disposal activities, materials recovery	5.74%
Manufacture of chemicals and chemical products	5.55%
Other	3.07%
Real estate activities	2.79%
Manufacture of motor vehicles, trailers and semi-trailers	2.68%
Civil engineering	2.29%
Manufacture of fabricated metal products, except machinery and equipment	2.15%
Computer programming, consultancy and related activities	2.02%
Insurance, reinsurance and pension funding, except compulsory social security	1.28%
Land transport and transport via pipelines	1.26%

Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of s	0.81%
Information service activities	0.59%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	4.35%	0.00%	0.00%
CapEx-based	7.02%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 54.76% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 37.79 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 3.1% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Dynamic Green Bonds (the “Financial Product”)

Legal Entity Identifier: 213800MBHN2GOTB7P804

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 84.19%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 9.77%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- % Green Bonds

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainability indicators perform?

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value	Coverage
% Green Bonds	82.27 % of NAV invested in green bonds	82.27 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... and compared to previous periods?

Sustainability KPI Name	Year	Value	Coverage
% of Green Bonds	2023	92.55 % of NAV invested in green bonds	97.15 %
% Green Bonds	2022	96 % of NAV invested in green bonds	100 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1185.251 Scope 2: 260.698 Scope 3: 7101.827 Scope 1+2: 1445.949 Scope 1+2+3: 8494.631	Scope 1: 63 Scope 2: 63 Scope 3: 62 Scope 1+2: 63 Scope 1+2+3: 62	Scope 1: 94 Scope 2: 94 Scope 3: 91 Scope 1+2: 94 Scope 1+2+3: 91

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial	0	68	100

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

		weapons (% of AuM)			
--	--	--------------------	--	--	--

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 24 Relative number: 24	Absolute number: 99 Relative number: 99

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1185.251 Scope 2: 260.698 Scope 3: 7101.827 Scope 1+2: 1445.949 Scope 1+2+3: 8494.631	Scope 1: 63 Scope 2: 63 Scope 3: 62 Scope 1+2: 63 Scope 1+2+3: 62	Scope 1: 94 Scope 2: 94 Scope 3: 91 Scope 1+2: 94 Scope 1+2+3: 91

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
RAGB 2.9% - 23/05/2029	Public administration and defence, compulsory social security	4.43%	AT
Portfolio 95984 USD SET SSX	Other	2.47%	N/A
Portfolio 95984 EUR SET SSX	Other	2.15%	N/A
INDOIS 4.7% - 06/06/2032	Public administration and defence, compulsory social security	1.63%	ID
NNGRNV 6% Var - 03/11/2043 Call	Insurance, reinsurance and pension funding, except compulsory social security	1.61%	NL
CHILE 3.5% - 25/01/2050 Call	Public administration and defence, compulsory social security	1.56%	CL
MRLSM 1.75% - 26/05/2025 Call	Real estate activities	1.41%	ES
AWLN 6% - 20/06/2039 Call	Water collection, treatment and supply	1.4%	GB

KOF 1.85% - 01/09/2032 Call	Manufacture of beverages	1.25%	MX

The portfolio proportions of investments presented above are an average over the reference period.

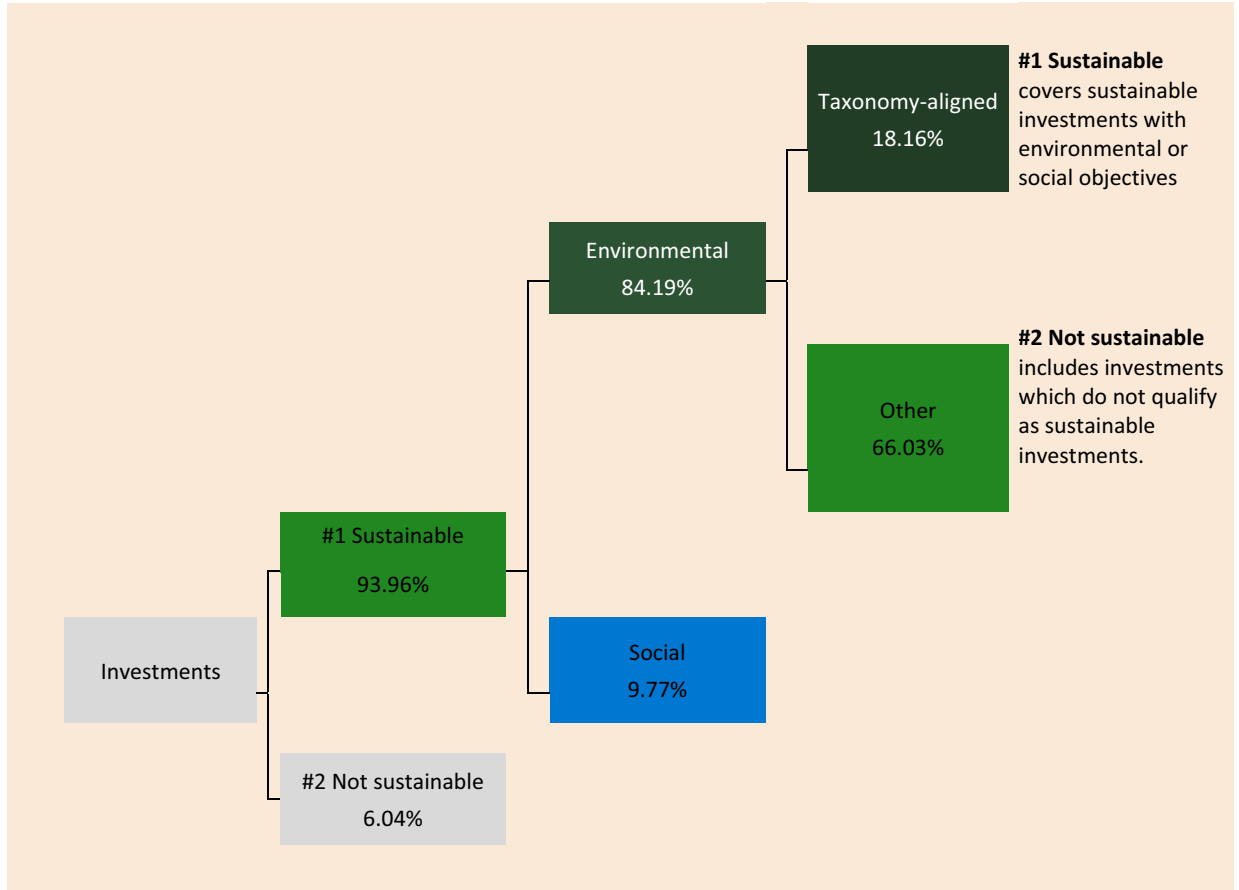

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	23.65%
Financial service activities, except insurance and pension funding	18.39%
Electricity, gas, steam and air conditioning supply	16.44%
Insurance, reinsurance and pension funding, except compulsory social security	9.88%
Other	7.07%
Real estate activities	6.77%
Telecommunications	3.17%
Manufacture of motor vehicles, trailers and semi-trailers	2.58%
Accommodation	1.91%
Water collection, treatment and supply	1.47%
Manufacture of computer, electronic and optical products	1.39%
Land transport and transport via pipelines	1.25%
Manufacture of beverages	1.25%
Activities of extraterritorial organisations and bodies	0.87%
Activities auxiliary to financial services and insurance activities	0.78%
Warehousing and support activities for transportation	0.72%

Manufacture of machinery and equipment n.e.c.	0.68%
Manufacture of other non-metallic mineral products	0.58%
Manufacture of paper and paper products	0.54%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.37%
Manufacture of electrical equipment	0.22%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas

In nuclear energy

No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	18.16%	0.00%	38.00%
CapEx-based	10.66%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 66.03% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 9.77 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 6.04% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Emerging Markets Bonds (the "Financial Product")

Legal Entity Identifier: 2138002YCDGI8HHQT070

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 49.49%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 48.62%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	184.28 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	516.3 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	94.35 %
Water Intensity	8006.48 Thousands of cubic meters per million \$ of revenue (for corporates only)	18214.79 Thousands of cubic meters per million \$ of revenue (for corporates only)	89.16 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2023	220.31 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	571.34 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	94.87 %
Water Intensity	2023	15237.29 Thousands of cubic meters for corporates	17675.55 Thousands of cubic meters for corporates	88.68 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other

factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 43 Relative number: 43	Absolute number: 90 Relative number: 90

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1753.905	Scope 1: 45 Scope 2: 45 Scope 3: 44 Scope 1+2: 45 Scope 1+2+3: 44	Scope 1: 89 Scope 2: 89 Scope 3: 88 Scope 1+2: 89 Scope 1+2+3: 88
Ecosystem protection & Deforestation policy			Scope 2: 867.509 Scope 3: 11241.421 Scope 1+2: 2621.414 Scope 1+2+3: 13749.938		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 1+2: 88.463	Scope 1+2: 45 Scope 1+2+3: 44	Scope 1+2: 89 Scope 1+2+3: 88
Ecosystem protection & Deforestation policy			Scope 1+2+3: 214.291		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 860.337	Scope 1+2+3: 44	Scope 1+2+3: 88
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	1.29	45	89
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 63.89 Energy Production: 71.79	Energy Consumption: 42 Energy Production: 1	Energy Consumption: 84 Energy Production: 2

Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	11.43	11	23
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0%	50	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	21.83	45	89
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	50	100

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 43 Relative number: 43	Absolute number: 90 Relative number: 90

Source: S&P Trucost, 2024

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
URUGUA 5.75% - 28/10/2034 Call	Public administration and defence, compulsory social security	4.94%	UY
MIVIVI 4.625% - 12/04/2027 Call	Financial service activities, except insurance and pension funding	3.99%	PE
PERU 3% - 15/01/2034 Call	Public administration and defence, compulsory social security	3.91%	PE
REPHUN 1.75% - 05/06/2035	Public administration and defence, compulsory social security	3.16%	HU
MEX 4.875% - 19/05/2033 Call	Public administration and defence, compulsory social security	3.13%	MX
INDOIS 4.7% - 06/06/2032	Public administration and defence, compulsory social security	3.04%	ID
MALAYS 2.07% - 28/04/2031	Public administration and defence, compulsory social security	2.79%	MY
QTELQD 3.875% - 31/01/2028	Telecommunications	2.69%	BM
KOF 1.85% - 01/09/2032 Call	Manufacture of beverages	2.63%	MX
CHILE 3.1% - 07/05/2041 Call	Public administration and defence, compulsory social security	2.6%	CL
AMXLMM 6.375% - 01/03/2035	Telecommunications	2.45%	MX
BRAZIL 6.25% - 18/03/2031	Public administration and defence, compulsory social security	2.42%	BR
GUATEM 5.375% - 24/04/2032 Call	Public administration and defence, compulsory social security	2.12%	GT
TAISEM 3.875% - 22/04/2027 Call	Manufacture of machinery and equipment n.e.c.	2%	US
INDON 1.3% - 23/03/2034 Call	Public administration and defence, compulsory social security	1.87%	ID

The portfolio proportions of investments presented above are an average over the reference period.

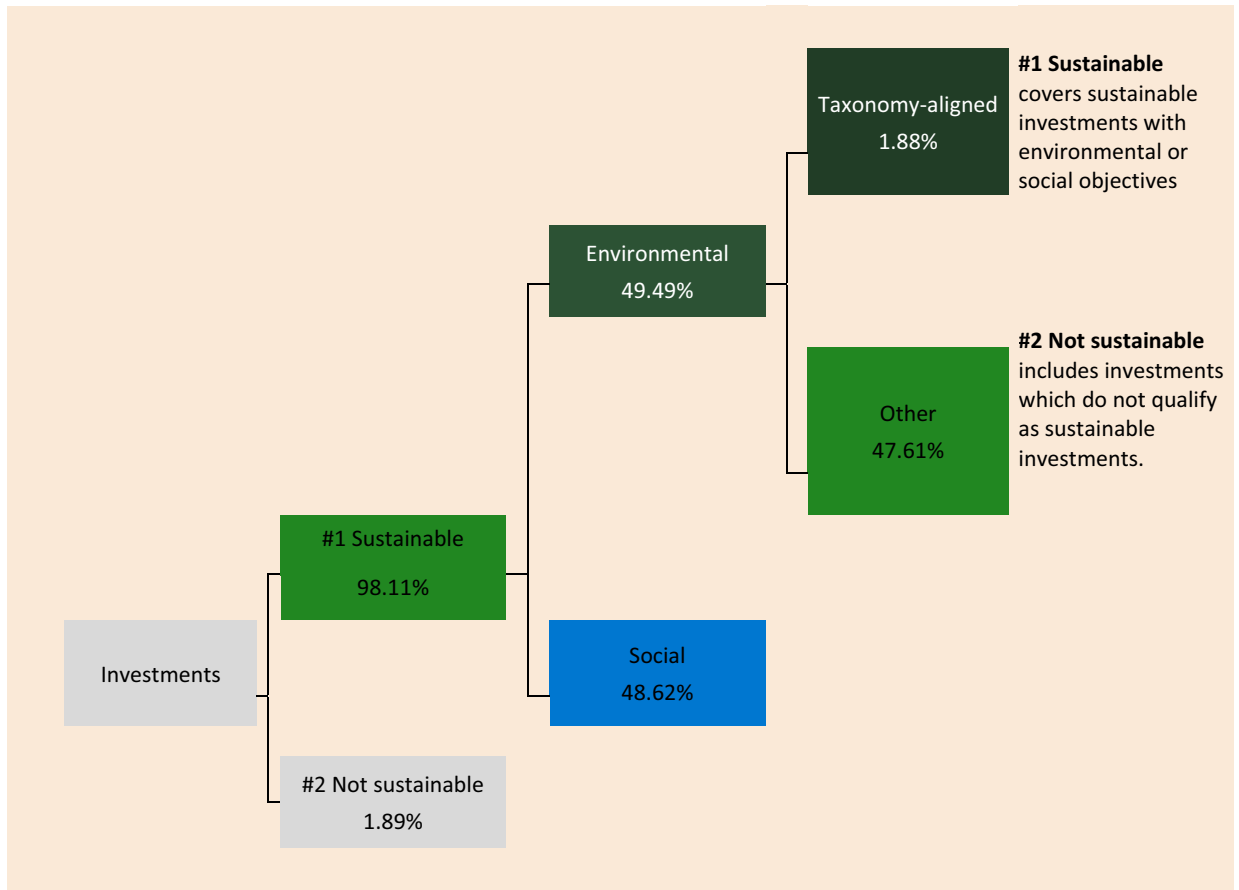

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	41.44%
Telecommunications	13.82%
Financial service activities, except insurance and pension funding	12.29%
Real estate activities	3.69%
Other	3.44%
Manufacture of food products	3.14%
Manufacture of computer, electronic and optical products	2.69%
Retail trade, except of motor vehicles and motorcycles	2.68%
Manufacture of beverages	2.63%
Land transport and transport via pipelines	2.06%
Manufacture of machinery and equipment n.e.c.	2%
Warehousing and support activities for transportation	1.85%
Activities of extraterritorial organisations and bodies	1.67%
Electricity, gas, steam and air conditioning supply	1.35%
Civil engineering	0.87%
Office administrative, office support and other business support activities	0.83%

Other mining and quarrying	0.81%
Crop and animal production, hunting and related service activities	0.64%
Human health activities	0.61%
Mining of metal ores	0.52%
Water collection, treatment and supply	0.5%
Manufacture of electrical equipment	0.46%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas

In nuclear energy

No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments		
	2024	2023
Revenue-based	1.88%	0.00%
CapEx-based	0.00%	0.00%
OpEx-based	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 47.61% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 48.62 % of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 1.89% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Emerging Markets Short Duration Bonds Low Carbon (the “Financial Product”) **Legal Entity Identifier:** 2138006QV9ITIYYGQQ04

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 36.14 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	144.45 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	519.91 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	91.55 %

Water Intensity	3270.81 Thousands of cubic meters per million \$ of revenue (for corporates only)	22008.9 Thousands of cubic meters per million \$ of revenue (for corporates only)	86.64 %
-----------------	---	---	---------

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2023	190.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	578.82 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.68 %
Water Intensity	2023	5950.64 Thousands of cubic meters for corporates	24012.8 Thousands of cubic meters for corporates	82.3 %
Carbon intensity	2022	193.92 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	688.91 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	80.45 %
Water intensity	2022	6485.75 Thousands of cubic meters for corporates	37094.33 Thousands of cubic meters for corporates	71.61 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	63	100

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in	Absolute number: 1 Relative number: 2.86	Absolute number: 33 Relative number: 33	Absolute number: 97 Relative number: 97

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

international and EU sanctions		international treaties and conventions, United Nations principles and, where applicable, national law			
--------------------------------	--	---	--	--	--

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 5964.349	Scope 1: 52	Scope 1: 84
Ecosystem protection & Deforestation policy			Scope 2: 3513.188	Scope 2: 52	Scope 2: 84
			Scope 3: 121423.836	Scope 3: 52	Scope 3: 83
			Scope 1+2: 9477.537	Scope 1+2: 52	Scope 1+2: 84
			Scope 1+2+3: 130826.266	Scope 1+2+3: 52	Scope 1+2+3: 83
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 64.082	Scope 1+2: 53	Scope 1+2: 85
Ecosystem protection & Deforestation policy			Scope 1+2+3: 480.196	Scope 1+2+3: 52	Scope 1+2+3: 83
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1454.547	Scope 1+2+3: 52	Scope 1+2+3: 83
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	3.74	52	84
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	9.3	9	15
ESG standard policy / violation of	PAI 10: Violation of UN Global Compact	Share of investments in investee	0%	63	100

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

international norms and standards	principles & OECD Guidelines for Multinational Enterprises	companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)			
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	63	100

For Sovereign and supranationals:

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2024-31/12/2024

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA WF Asian Short Duration Bonds M Capitalisation	Financial service activities, except insurance and pension funding	3.23%	LU
QNBK 1.625% - 22/09/2025	Financial service activities, except insurance and pension funding	2.4%	KY
PARGUY 4.7% - 27/03/2027	Public administration and defence, compulsory social security	2.15%	PY
COSTAR 4.375% - 30/04/2025	Public administration and defence, compulsory social security	2.06%	CR
IVYCST 6.375% - 03/03/2028 Sink	Public administration and defence, compulsory social security	1.71%	CI
DOMREP 5.5% - 27/01/2025	Public administration and defence, compulsory social security	1.61%	DO
CELARA 3.875% - 02/11/2027 Call	Manufacture of paper and paper products	1.37%	CL
KBFING 4% - 09/06/2025	Financial service activities, except insurance and pension funding	1.34%	KR
INRCON 3.25% - 22/03/2028 Call	Retail trade, except of motor vehicles and motorcycles	1.27%	PE
NEPSJ 1.875% - 09/10/2026 Call	Real estate activities	1.26%	NL
MOROC 2.375% - 15/12/2027	Public administration and defence, compulsory social security	1.25%	MA
MOROC 5.95% - 08/03/2028	Public administration and defence, compulsory social security	1.16%	MA
BAP 2.75% - 17/06/2025 Call	Financial service activities, except insurance and pension funding	1.16%	PE
TNEMAK 2.25% - 20/07/2028 Call	Manufacture of motor vehicles, trailers and semi-trailers	1.13%	MX
SAMRUK 2% - 28/10/2026 Call	Financial service activities, except insurance and pension funding	1.13%	KZ

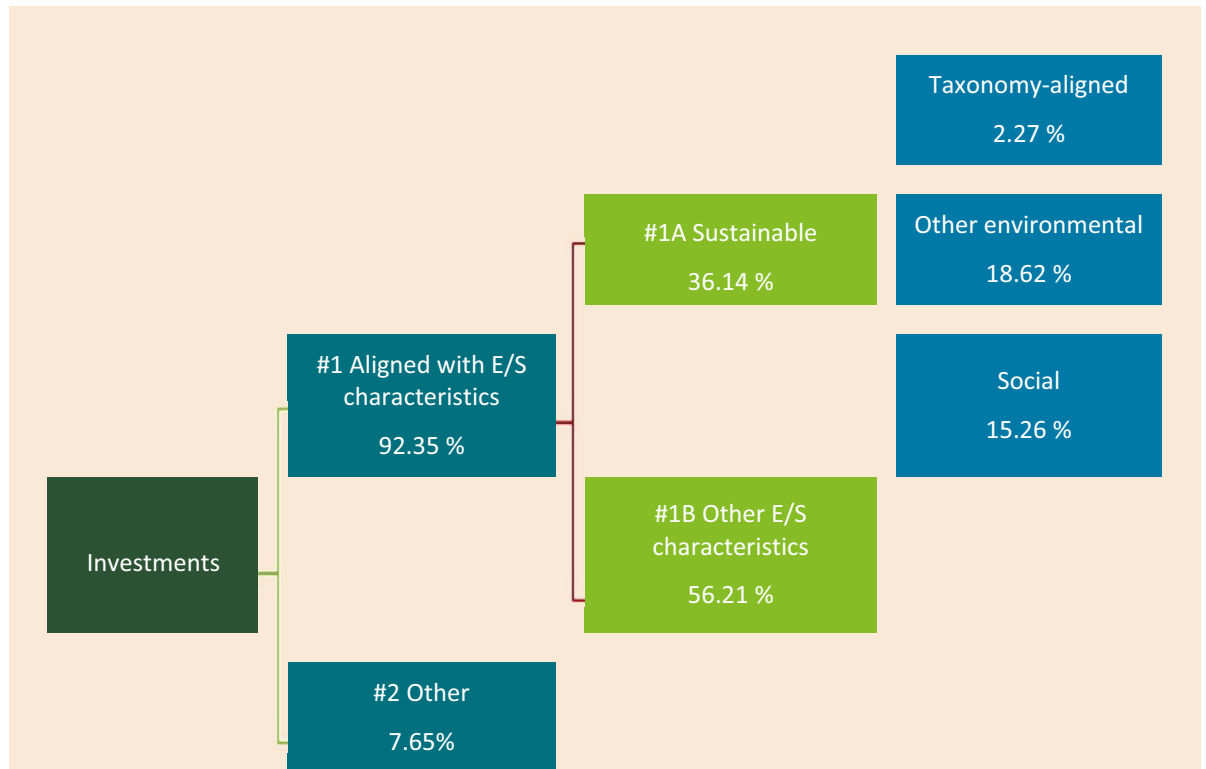

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	32.79%
Financial service activities, except insurance and pension funding	25.53%
Electricity, gas, steam and air conditioning supply	5.65%
Real estate activities	4.95%
Telecommunications	3.92%
Mining of metal ores	3.87%
Manufacture of paper and paper products	3.78%
Gambling and betting activities	2.5%
Retail trade, except of motor vehicles and motorcycles	1.87%

Manufacture of motor vehicles, trailers and semi-trailers	1.69%
Activities of extraterritorial organisations and bodies	1.45%
Other	1.44%
Manufacture of food products	1.32%
Manufacture of machinery and equipment n.e.c.	1.11%
Crop and animal production, hunting and related service activities	0.95%
Civil engineering	0.94%
Information service activities	0.94%
Manufacture of chemicals and chemical products	0.75%
Extraction of crude petroleum and natural gas	0.64%
Manufacture of electrical equipment	0.58%
Manufacture of beverages	0.54%
Mining support service activities	0.49%
Office administrative, office support and other business support activities	0.48%
Manufacture of computer, electronic and optical products	0.45%
Manufacture of coke and refined petroleum products	0.41%
Land transport and transport via pipelines	0.34%
Construction of buildings	0.19%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.16%
Water collection, treatment and supply	0.16%
Repair and installation of machinery and equipment	0.08%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	2.27%	0.00%	0.00%
CapEx-based	0.04%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 18.62% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 15.26% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 7.65% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Europe Equity (the “Financial Product”)

Legal Entity Identifier: 213800NQDIOBLYXILZ43

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 46.35%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 52.31%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	120.98 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	133.04 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.85 %
Women on Board	42.87 % of women on board (for corporates only)	42.04 % of women on board (for corporates only)	99.53 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2023	146.48 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	147.72 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.82 %
Women on Board	2023	42.17 % of women on board	41.24 % of women on board	98.31 %
Carbon intensity	2022	150.47 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	199.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.83 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

----- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 25 Relative number: 25

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 8932.032	Scope 1: 97 Scope 2: 97 Scope 3: 97 Scope 1+2: 97 Scope 1+2+3: 97	Scope 1: 98 Scope 2: 98 Scope 3: 98 Scope 1+2: 98 Scope 1+2+3: 98
Ecosystem protection & Deforestation policy			Scope 2: 4949.91 Scope 3: 263341.344 Scope 1+2: 13881.941 Scope 1+2+3: 277201.75		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 1+2: 39.533	Scope 1+2: 98 Scope 1+2+3: 97	Scope 1+2: 99 Scope 1+2+3: 98
Ecosystem protection & Deforestation policy			Scope 1+2+3: 844.926		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 1062.046	Scope 1+2+3: 99	Scope 1+2+3: 99

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

Largest investments	Sector (NACE level 2)	% Assets	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	5.59%	NL
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.99%	GB
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	4.28%	DE
NOVO NORDISK A/S-B XCSE DKK	Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.34%	DK
RELX PLC XLON GBP	Legal and accounting activities	3.34%	GB
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	3.07%	FR

PUBLICIS GROUPE XPAR EUR	Advertising and market research	2.37%	FR
SSE PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.32%	GB
INFORMA PLC XLON GBP	Publishing activities	2.31%	GB

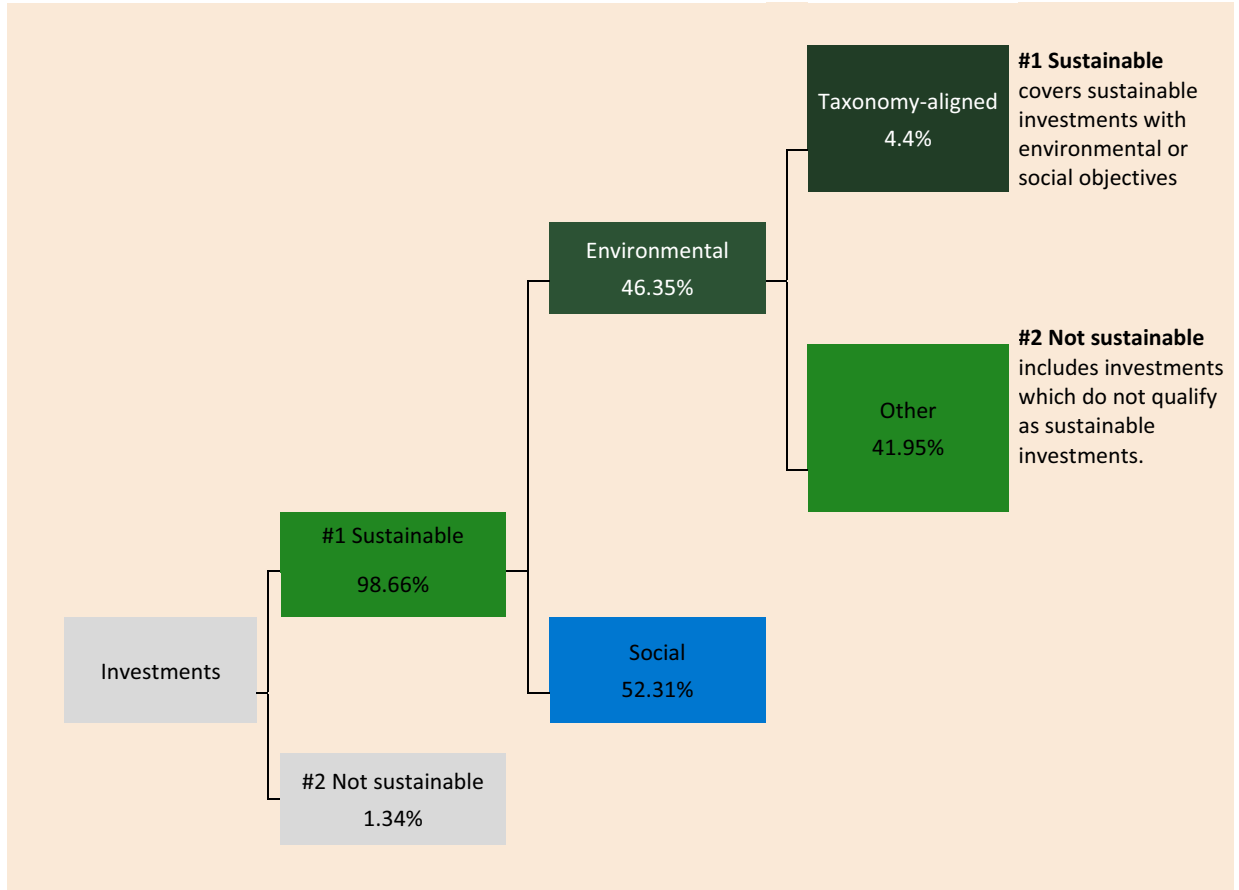

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	14.26%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	13.12%
Manufacture of machinery and equipment n.e.c.	8.38%
Electricity, gas, steam and air conditioning supply	6.31%
Publishing activities	5.78%
Manufacture of chemicals and chemical products	5.16%
Legal and accounting activities	4.95%
Insurance, reinsurance and pension funding, except compulsory social security	4.28%
Activities auxiliary to financial services and insurance activities	3.89%
Manufacture of electrical equipment	3%
Manufacture of food products	2.86%
Civil engineering	2.84%
Manufacture of paper and paper products	2.69%
Advertising and market research	2.37%
Manufacture of motor vehicles, trailers and semi-trailers	2.16%
Telecommunications	2.11%

Water collection, treatment and supply	2.02%
Manufacture of fabricated metal products, except machinery and equipment	2.01%
Human health activities	1.93%
Manufacture of rubber and plastic products	1.77%
Retail trade, except of motor vehicles and motorcycles	1.67%
Manufacture of computer, electronic and optical products	1.42%
Manufacture of wearing apparel	1.3%
Scientific research and development	1.16%
Security and investigation activities	0.89%
Computer programming, consultancy and related activities	0.7%
Accommodation	0.45%
Other	0.29%
Manufacture of coke and refined petroleum products	0.25%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	4.40%	0.00%	0.00%
CapEx-based	6.47%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 41.95% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 52.31 % of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 1.34% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT European High Yield Bonds Low Carbon (the “Financial Product”) **Legal Entity Identifier:** 213800LKVLZX3UIPDE25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 61.74 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

During the reference period, the Financial Product has applied a ESG Score Upgrade Approach approach on its investment universe, according to which the ESG scoring of the Financial Product has been higher than the scoring of the investment universe after removing at least the 20% worst ESG Scores, on a weighted average basis.

Sustainability KPI Name	Value	Benchmark	Coverage
-------------------------	-------	-----------	----------

Carbon Intensity	72.45 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	172.71 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	91.33 %
Water Intensity	530.26 Thousands of cubic meters per million \$ of revenue (for corporates only)	9544.2 Thousands of cubic meters per million \$ of revenue (for corporates only)	91.33 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2023	85.95 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	186.11 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.47 %
Water Intensity	2023	633.49 Thousands of cubic meters for corporates	10309.7 Thousands of cubic meters for corporates	90.47 %
Carbon intensity	2022	91.24 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	303.12 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.11 %
Water intensity	2022	694.25 Thousands of cubic meters for corporates	23961.24 Thousands of cubic meters for corporates	90.11 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product's legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 677.719 Scope 2: 279.564 Scope 3: 29532.277 Scope 1+2: 957.283 Scope 1+2+3: 30483.453	Scope 1: 81 Scope 2: 81 Scope 3: 78 Scope 1+2: 81 Scope 1+2+3: 78	Scope 1: 84 Scope 2: 84 Scope 3: 81 Scope 1+2: 84 Scope 1+2+3: 81

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 677.719	Scope 1: 81	Scope 1: 84
Ecosystem protection & Deforestation policy			Scope 2: 279.564		
			Scope 3: 29532.277	Scope 3: 78	Scope 3: 81
			Scope 1+2: 957.283	Scope 1+2: 81	Scope 1+2: 84
			Scope 1+2+3: 30483.453	Scope 1+2+3: 78	Scope 1+2+3: 81
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 44.835	Scope 1+2: 78	Scope 1+2: 81
Ecosystem protection & Deforestation policy			Scope 1+2+3: 980.414		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1208.785	Scope 1+2+3: 82	Scope 1+2+3: 84
Ecosystem protection & Deforestation policy					

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	1.42	85	88
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 56.73	Energy Consumption: 79 Energy Production: 0	Energy Consumption: 81
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	20.37	20	21
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0%	96	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	35.37	84	87
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	96	100

For Sovereign and supranationals:

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the “current value of all investments” as defined by the Regulation, or on “eligible assets with available data only” where relevant. For the purpose of this document, “eligible assets with available data only” refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
ISPIM 5.148% - 10/06/2030	Financial service activities, except insurance and pension funding	2.55%	IT
IRM 3.875% - 15/11/2025 Call	Real estate activities	2.24%	GB
OI 6.25% - 15/05/2028 Call	Manufacture of paper and paper products	2.23%	NL
IGT 3.5% - 15/06/2026 Call	Gambling and betting activities	2.15%	US
AZELIS 5.75% - 15/03/2028 Call	Wholesale trade, except of motor vehicles and motorcycles	2.1%	BE

ABESM 3.248% Var - 24/11/2025 Perp	Civil engineering	1.95%	NL
RENAUL 2.375% - 25/05/2026 Call	Manufacture of motor vehicles, trailers and semi-trailers	1.95%	FR

The portfolio proportions of investments presented above are an average over the reference period.

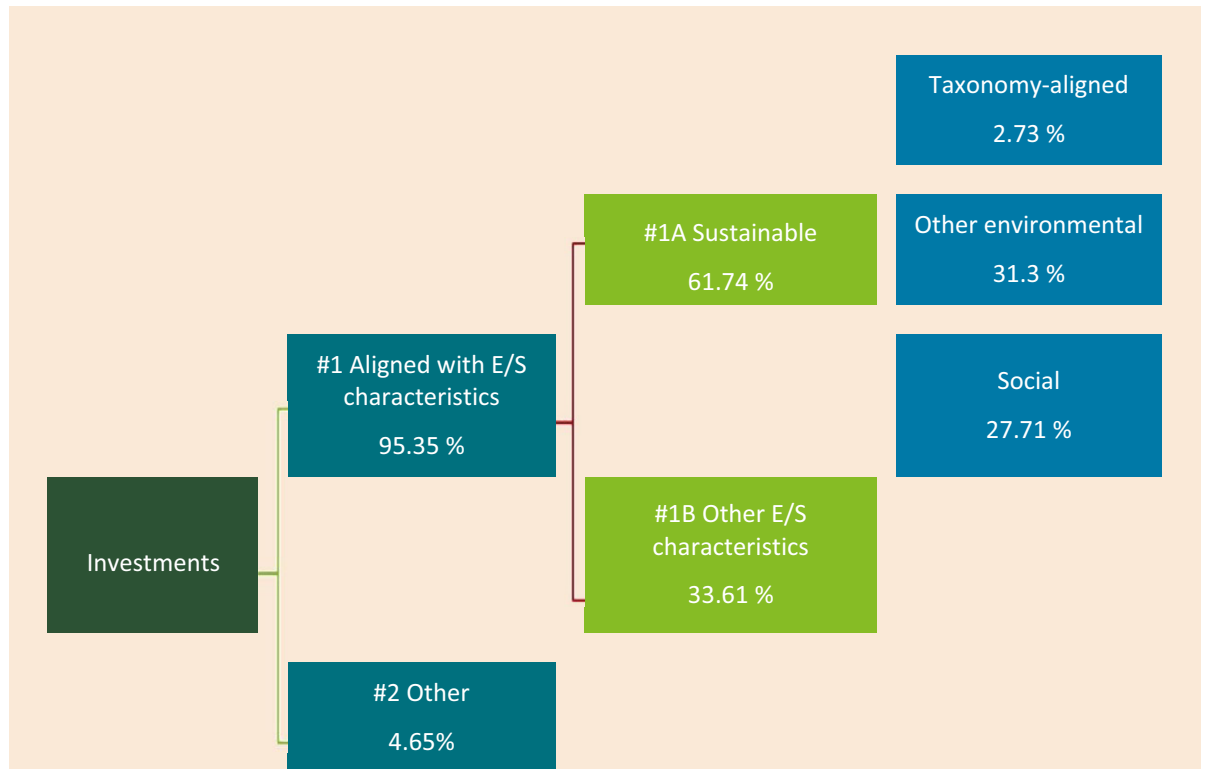

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2024-31/12/2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Telecommunications	16.83%
Financial service activities, except insurance and pension funding	11.25%
Manufacture of motor vehicles, trailers and semi-trailers	6.68%
Gambling and betting activities	5.53%
Retail trade, except of motor vehicles and motorcycles	5.08%
Insurance, reinsurance and pension funding, except compulsory social security	5%
Human health activities	4.82%
Warehousing and support activities for transportation	4.26%
Manufacture of chemicals and chemical products	4.19%

Real estate activities	4.15%
Manufacture of paper and paper products	3.5%
Office administrative, office support and other business support activities	3.16%
Publishing activities	2.86%
Civil engineering	2.4%
Waste collection, treatment and disposal activities, materials recovery	2.32%
Wholesale trade, except of motor vehicles and motorcycles	2.1%
Scientific research and development	2.1%
Repair and installation of machinery and equipment	2.01%
Manufacture of electrical equipment	1.96%
Information service activities	1.92%
Architectural and engineering activities, technical testing and analysis	1.61%
Manufacture of other transport equipment	1.42%
Other	1.38%
Manufacture of beverages	0.96%
Motion picture, video and television programme production, sound recording and music publishing acti	0.85%
Manufacture of fabricated metal products, except machinery and equipment	0.84%
Food and beverage service activities	0.53%
Rental and leasing activities	0.28%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

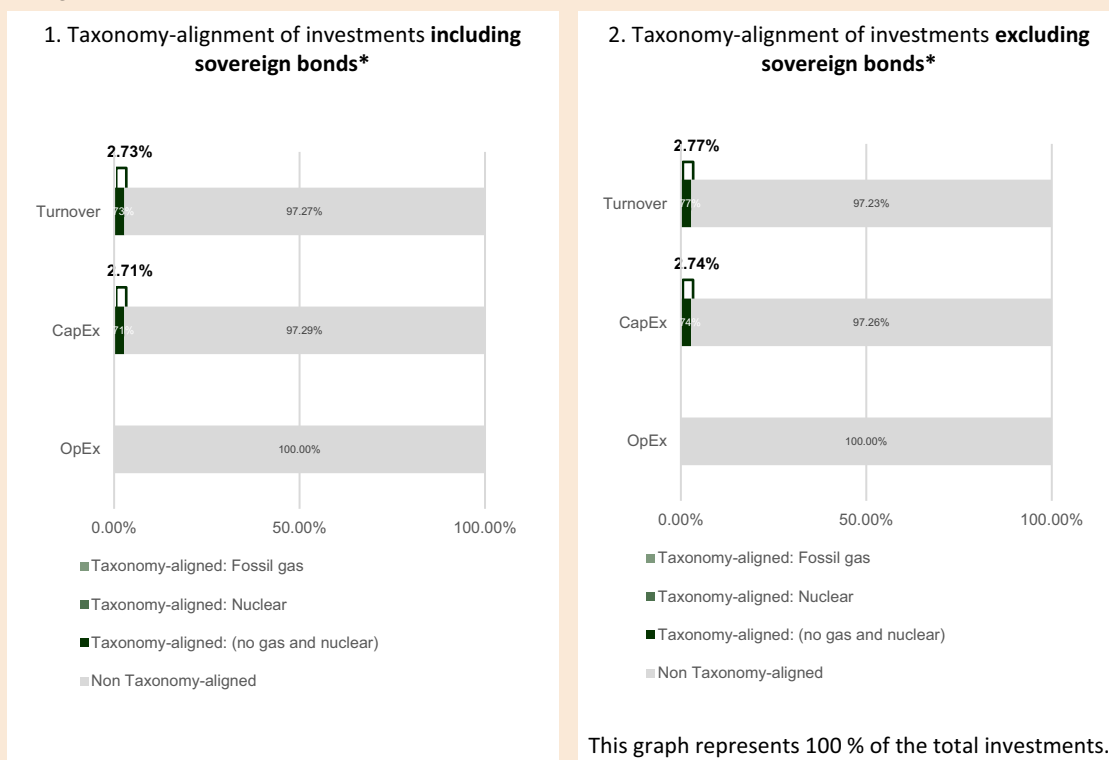

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	2.73%	0.00%	0.00%
CapEx-based	2.71%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.3% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 27.71% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 4.65% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Eurozone Equity (the “Financial Product”)

Legal Entity Identifier: 2138003LLF1182XFON77

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 48.39%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 48.74%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	120.64 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	136.64 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	100 %
Women on Board	43.85 % of women on board (for corporates only)	42.49 % of women on board (for corporates only)	99.41 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2023	157.85 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	150.66 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Women on Board	2023	43.01 % of women on board	41.98 % of women on board	97.65 %
Carbon intensity	2022	168.8 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	240.09 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.99 %
Women on Board	2022	42.84 % of women on board	40.77 % of women on board	99.43 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 6685.773 Scope 2: 4702.661 Scope 3: 223546.719 Scope 1+2: 11388.434 Scope 1+2+3: 234969.016	Scope 1: 96 Scope 2: 96 Scope 3: 96 Scope 1+2: 96 Scope 1+2+3: 96	Scope 1: 98 Scope 2: 98 Scope 3: 98 Scope 1+2: 98 Scope 1+2+3: 98

	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 1089.976	Scope 1+2+3: 97	Scope 1+2+3: 100
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	11.18	97	100
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 51.96 Energy Production: 44.98	Energy Consumption: 95 Energy Production: 5	Energy Consumption: 98 Energy Production: 5
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector (GWh/€M)	Sector NACE C: 0.289 Sector NACE D: 1.723 Sector NACE E: 2.832 Sector NACE F: 0.133 Sector NACE G: 0.032	Sector NACE A: 0 Sector NACE B: 0 Sector NACE C: 47 Sector NACE D: 6 Sector NACE E: 2 Sector NACE F: 2 Sector NACE G: 1 Sector NACE H: 0 Sector NACE L: 0	Sector NACE C: 87 Sector NACE D: 64 Sector NACE E: 75 Sector NACE F: 76 Sector NACE G: 75
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with	46.74	47	48

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)			
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.043	37	39
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	1.149	67	69

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0%	97	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	4.06 %	97	100
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	9.99%	89	91
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	44.74	97	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	97	100

For Sovereign and supnationals:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 96 Relative number: 96

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets																																
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 6685.773	Scope 1: 96 Scope 2: 96 Scope 3: 96 Scope 1+2: 96 Scope 1+2+3: 96	Scope 1: 98 Scope 2: 98 Scope 3: 98 Scope 1+2: 98 Scope 1+2+3: 98

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

Largest investments	Sector (NACE level 2)	% Assets	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	8.13%	NL
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	5.34%	FR
INTESA SANPAOLO MTAA EUR	Financial service activities, except insurance and pension funding	4.7%	IT
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	4.06%	ES
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	3.89%	DE
PUBLICIS GROUPE XPAR EUR	Advertising and market research	3.86%	FR
AIR LIQUIDE SA XPAR EUR	Manufacture of chemicals and chemical products	3.3%	FR
BNP PARIBAS XPAR EUR	Financial service activities, except insurance and pension funding	3.14%	FR
ESSILORLUXOTTICA XPAR EUR	Other manufacturing	3.01%	FR
Portfolio EUR SET SSX	Other	2.85%	N/A
L'OREAL XPAR EUR	Manufacture of chemicals and chemical products	2.75%	FR
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	2.74%	IT
DEUTSCHE TELEKOM AG-REG XETR EUR	Telecommunications	2.68%	DE
SANOFI XPAR EUR	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.63%	FR
PRYSMIAN SPA MTAA EUR	Manufacture of fabricated metal products, except machinery and equipment	2.43%	IT

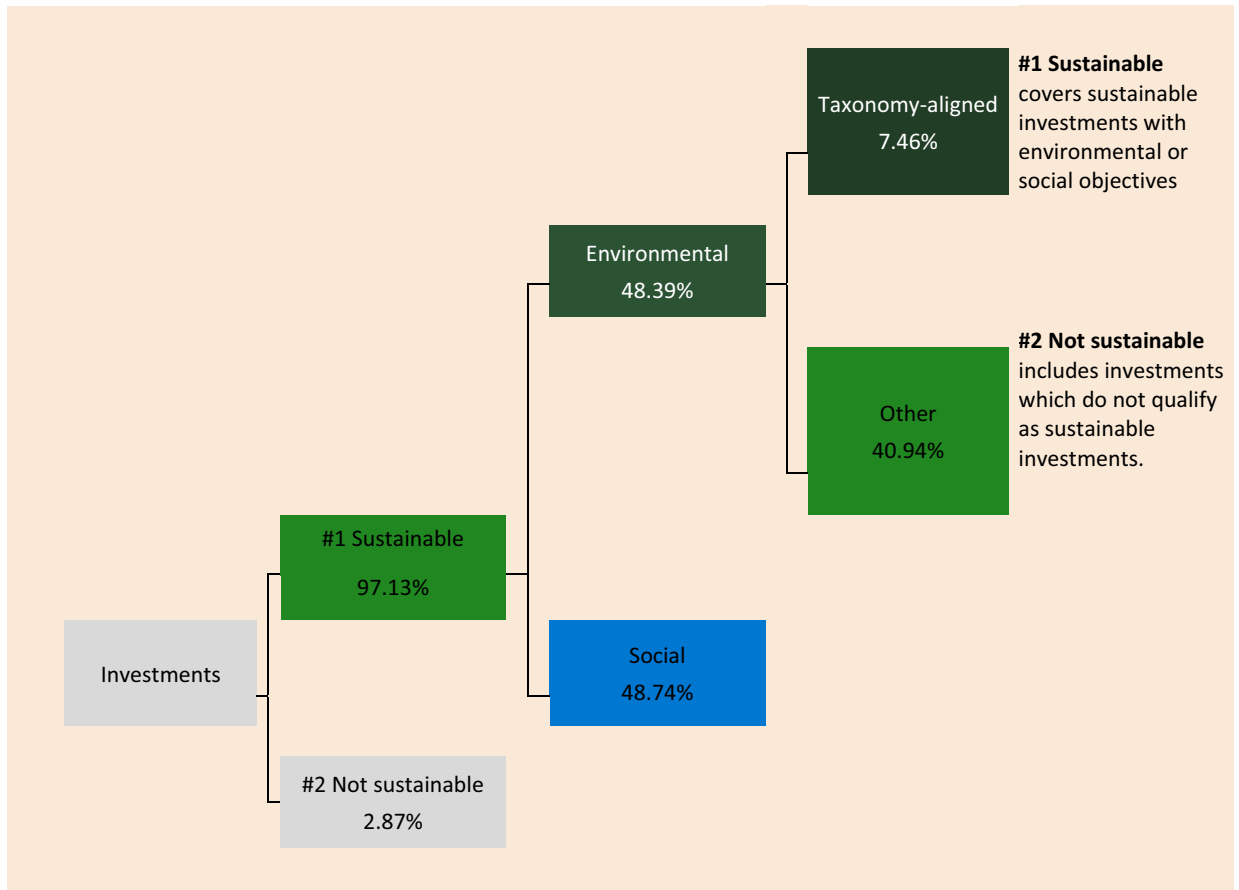

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	15.83%
Manufacture of machinery and equipment n.e.c.	10.48%
Manufacture of chemicals and chemical products	9.48%
Manufacture of electrical equipment	6.53%
Electricity, gas, steam and air conditioning supply	6.01%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.29%
Insurance, reinsurance and pension funding, except compulsory social security	3.89%
Advertising and market research	3.86%
Legal and accounting activities	3.38%
Civil engineering	3.03%
Other manufacturing	3.01%
Other	2.85%
Architectural and engineering activities, technical testing and analysis	2.71%
Telecommunications	2.68%
Manufacture of fabricated metal products, except machinery and equipment	2.43%
Manufacture of wearing apparel	2.35%

Publishing activities	1.95%
Manufacture of motor vehicles, trailers and semi-trailers	1.89%
Water collection, treatment and supply	1.75%
Manufacture of rubber and plastic products	1.74%
Scientific research and development	1.51%
Manufacture of computer, electronic and optical products	1.49%
Travel agency, tour operator reservation service and related activities	1.44%
Retail trade, except of motor vehicles and motorcycles	1.37%
Activities auxiliary to financial services and insurance activities	1.29%
Computer programming, consultancy and related activities	1.28%
Manufacture of paper and paper products	0.92%
Manufacture of coke and refined petroleum products	0.56%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	7.46%	0.00%	0.00%
CapEx-based	11.36%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 40.94% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 48.74 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 2.87% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Factors - Climate Equity Fund (the “Financial Product”)

Legal Entity Identifier: 213800KYJJ744RJXUS49

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 59.48%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 39.21%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- GHG Emissions Intensity
- Renewable Energy Production

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
GHG Emissions Intensity	4925.53 Metric tonnes of carbon dioxide equivalent (tCO2e)	2800.24 Metric tonnes of carbon dioxide equivalent (tCO2e)	92.42 %
Renewable Energy Production	143.73 of megawatt hours of renewable energy produced per million euros invested using the EVIC	9.31 of megawatt hours of renewable energy produced per million euros invested using the EVIC	92.42 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon intensity	2023	90.16 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign		100 %
Carbon intensity	2022	145.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	119.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.55 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

----- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 189.693 Scope 2: 98.314 Scope 3: 4764.762 Scope 1+2: 288.007 Scope 1+2+3: 5052.979	Scope 1: 88 Scope 2: 88 Scope 3: 87 Scope 1+2: 88 Scope 1+2+3: 87	Scope 1: 89 Scope 2: 89 Scope 3: 88 Scope 1+2: 89 Scope 1+2+3: 88

Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	3.24	98	99
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 53.14 Energy Production: 38.72	Energy Consumption: 95 Energy Production: 2	Energy Consumption: 96 Energy Production: 2
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector (GWh/€M)	Sector NACE B: 0.848 Sector NACE C: 0.22 Sector NACE D: 0.818 Sector NACE E: 0.288 Sector NACE F: 0.281 Sector NACE G: 0.035 Sector NACE H: 1.137 Sector NACE L: 0.276	Sector NACE A: 0 Sector NACE B: 0 Sector NACE C: 35 Sector NACE D: 5 Sector NACE E: 1 Sector NACE F: 0 Sector NACE G: 5 Sector NACE H: 1 Sector NACE L: 1	Sector NACE B: 25 Sector NACE C: 84 Sector NACE D: 57 Sector NACE E: 75 Sector NACE F: 25 Sector NACE G: 73 Sector NACE H: 75 Sector NACE L: 75
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with	39.03	39	40

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)			
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.011	38	38
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.116	59	59

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0%	99	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	33.54 %	98	99
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	15.16%	92	93
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	35.17	98	99
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	99	100

For Sovereign and supnationals:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 189.693	Scope 1: 88	Scope 1: 89
Ecosystem protection & Deforestation policy			Scope 2: 98.314 Scope 3: 4764.762 Scope 1+2: 288.007 Scope 1+2+3: 5052.979	Scope 2: 88 Scope 3: 87 Scope 1+2: 88 Scope 1+2+3: 87	Scope 2: 89 Scope 3: 88 Scope 1+2: 89 Scope 1+2+3: 88
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 1+2: 16.069	Scope 1+2: 99	Scope 1+2: 100
Ecosystem protection & Deforestation policy			Scope 1+2+3: 351.957	Scope 1+2+3: 87	Scope 1+2+3: 88

Source: S&P Trucost, 2024

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	5.63%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	5.52%	US
MICROSOFT CORP XNGS USD	Publishing activities	5.5%	US
TESLA INC XNGS USD	Manufacture of motor vehicles, trailers and semi-trailers	2.33%	US
EDP RENOVAVEIS SA XLIS EUR	Electricity, gas, steam and air conditioning supply	1.63%	ES
ITRON INC XNGS USD	Manufacture of computer, electronic and optical products	1.62%	US
PROCTER & GAMBLE CO/THE XNYS USD	Manufacture of paper and paper products	1.42%	US
JOHNSON & JOHNSON XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.41%	US
ROCKWOOL A/S-B SHS XCSE DKK	Manufacture of other non-metallic mineral products	1.27%	DK
VESTAS WIND SYSTEMS A/S XCSE DKK	Manufacture of machinery and equipment n.e.c.	1.26%	DK
FIRST SOLAR INC XNGS USD	Manufacture of electrical equipment	1.17%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	1.15%	US
Portfolio 94617 USD SET SSX	Other	1.1%	N/A
ORSTED A/S XCSE DKK	Electricity, gas, steam and air conditioning supply	1.02%	DK
MASTERCARD INC - A XNYS USD	Activities auxiliary to financial services and insurance activities	0.99%	US

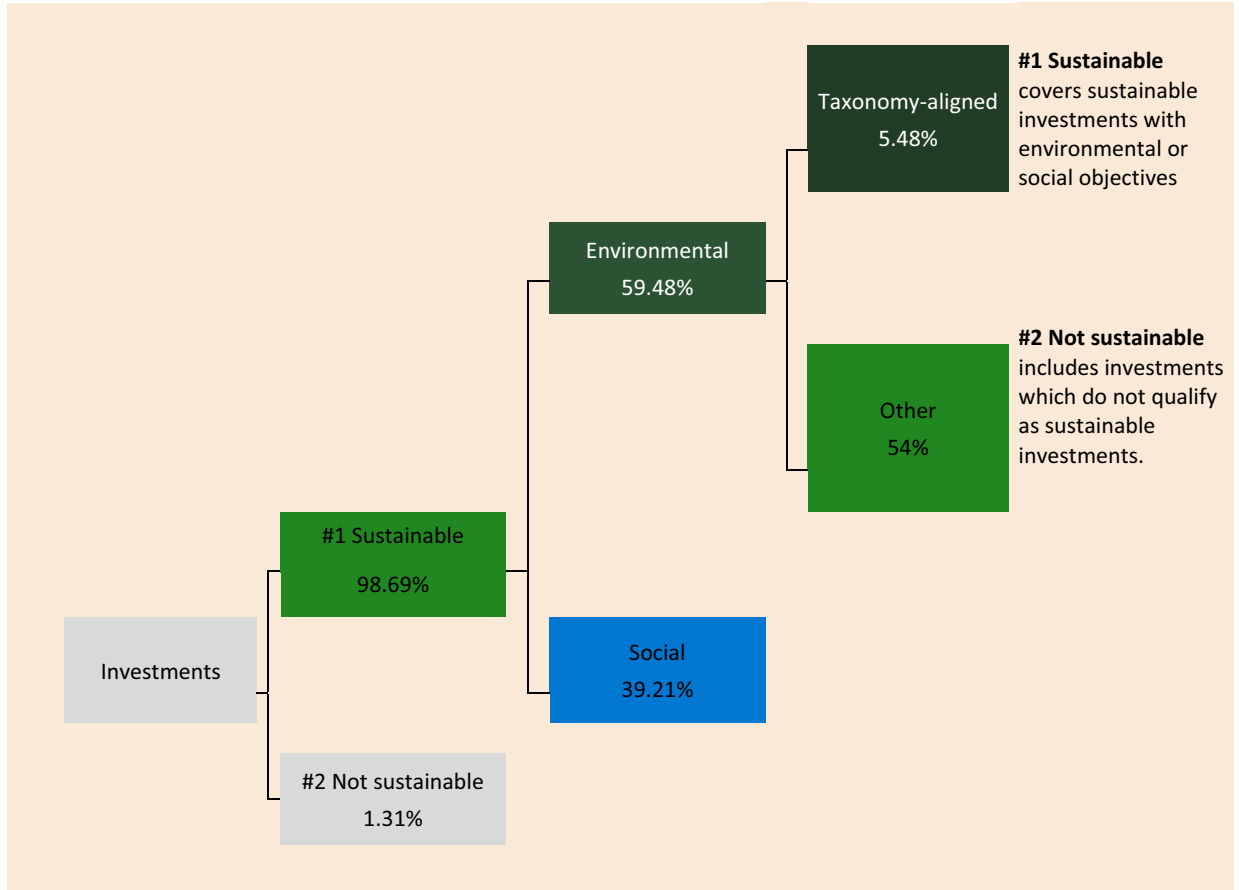

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	18.7%
Publishing activities	9.68%
Electricity, gas, steam and air conditioning supply	5.64%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.63%
Manufacture of machinery and equipment n.e.c.	5.14%
Activities auxiliary to financial services and insurance activities	4.81%
Insurance, reinsurance and pension funding, except compulsory social security	4.66%
Telecommunications	4.44%
Manufacture of electrical equipment	3.76%
Retail trade, except of motor vehicles and motorcycles	3.63%
Manufacture of paper and paper products	3.32%
Computer programming, consultancy and related activities	3.32%
Manufacture of motor vehicles, trailers and semi-trailers	3.27%
Financial service activities, except insurance and pension funding	2.72%
Manufacture of chemicals and chemical products	2.3%
Manufacture of other non-metallic mineral products	1.97%

Other	1.66%
Legal and accounting activities	1.62%
Scientific research and development	1.5%
Information service activities	1.22%
Wholesale trade, except of motor vehicles and motorcycles	1.16%
Architectural and engineering activities, technical testing and analysis	1.08%
Manufacture of beverages	1.07%
Land transport and transport via pipelines	1.03%
Real estate activities	0.93%
Civil engineering	0.8%
Manufacture of wearing apparel	0.63%
Manufacture of leather and related products	0.56%
Advertising and market research	0.52%
Waste collection, treatment and disposal activities, materials recovery	0.45%
Human health activities	0.42%
Office administrative, office support and other business support activities	0.37%
Gambling and betting activities	0.28%
Other manufacturing	0.25%
Manufacture of food products	0.25%
Employment activities	0.25%
Security and investigation activities	0.2%
Food and beverage service activities	0.13%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of s	0.13%
Motion picture, video and television programme production, sound recording and music publishing acti	0.12%
Manufacture of other transport equipment	0.11%
Construction of buildings	0.11%
Printing and reproduction of recorded media	0.06%
Accommodation	0.04%
Manufacture of fabricated metal products, except machinery and equipment	0.03%
Mining of metal ores	0.03%
Water collection, treatment and supply	0.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	5.48%	0.00%	0.00%
CapEx-based	6.07%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 54% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 39.21 % of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 1.31% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR in 2024 and therefore applied continuously the label’s requirements since its labelling into its daily management during the reference period. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Green Bonds
(the "Financial Product")

Legal Entity Identifier: 21380049TNZVOFLO2707

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 96.8%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 0.36%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- % Green Bonds

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainability indicators perform?

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value	Coverage
% Green Bonds	95.22 % of NAV invested in green bonds	95.22 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... and compared to previous periods?

Sustainability KPI Name	Year	Value	Coverage
% of Green Bonds	2023	95.18 % of NAV invested in green bonds	97.58 %
% Green Bonds	2022	96 % of NAV invested in green bonds	100 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 60492.809 Scope 2: 10998.561 Scope 3: 311209.219 Scope 1+2: 71491.375 Scope 1+2+3: 382192.719	Scope 1: 56 Scope 2: 56 Scope 3: 54 Scope 1+2: 56 Scope 1+2+3: 54	Scope 1: 87 Scope 2: 87 Scope 3: 84 Scope 1+2: 87 Scope 1+2+3: 84

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 21 Relative number: 21	Absolute number: 67 Relative number: 67

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 60492.809	Scope 1: 56 Scope 2: 56 Scope 3: 54 Scope 1+2: 56 Scope 1+2+3: 54	Scope 1: 87 Scope 2: 87 Scope 3: 84 Scope 1+2: 87 Scope 1+2+3: 84

Source: S&P Trucost, 2024

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
EIB 3.75% - 14/02/2033	Activities of extraterritorial organisations and bodies	2.53%	LU
RAGB 2.9% - 23/05/2029	Public administration and defence, compulsory social security	2.26%	AT
FRTR 1.75% - 25/06/2039	Public administration and defence, compulsory social security	2.08%	FR
PF 52691 EUR Settlement Acc at SSX	Other	1.85%	N/A
BTPS 4% - 30/04/2035	Public administration and defence, compulsory social security	1.48%	IT
SPGB 1% - 30/07/2042	Public administration and defence, compulsory social security	1.29%	ES
DBR 2.3% - 15/02/2033	Public administration and defence, compulsory social security	1.22%	DE
DBR 0 - 15/08/2050	Public administration and defence, compulsory social security	1.07%	DE

NGGLN 1.96% - 27/06/2030 Call	Electricity, gas, steam and air conditioning supply	0.9%	US
FRTR 0.5% - 25/06/2044	Public administration and defence, compulsory social security	0.88%	FR
EIB 1.625% - 09/10/2029	Activities of extraterritorial organisations and bodies	0.75%	LU
EIB 3.3% - 03/02/2028	Activities of extraterritorial organisations and bodies	0.72%	LU
EU 0.4% - 04/02/2037	Activities of extraterritorial organisations and bodies	0.7%	BE

The portfolio proportions of investments presented above are an average over the reference period.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	23.85%
Public administration and defence, compulsory social security	23.1%
Electricity, gas, steam and air conditioning supply	16.82%
Activities of extraterritorial organisations and bodies	8.02%
Real estate activities	6.53%
Telecommunications	3.06%
Manufacture of motor vehicles, trailers and semi-trailers	3.05%
Other	2.75%
Insurance, reinsurance and pension funding, except compulsory social security	2.65%
Land transport and transport via pipelines	2.58%
Manufacture of paper and paper products	1.68%
Warehousing and support activities for transportation	1.45%
Manufacture of beverages	0.83%
Manufacture of wearing apparel	0.74%
Manufacture of other non-metallic mineral products	0.56%
Accommodation	0.51%

Manufacture of chemicals and chemical products	0.4%
Manufacture of machinery and equipment n.e.c.	0.39%
Water collection, treatment and supply	0.3%
Manufacture of computer, electronic and optical products	0.27%
Postal and courier activities	0.24%
Construction of buildings	0.14%
Manufacture of food products	0.05%
Other manufacturing	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas

In nuclear energy

No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	20.95%	0.00%	38.00%
CapEx-based	10.52%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 75.85% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 0.36 % of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 2.85% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

The Financial Product has designated the ICE BofA Green Bond Hedged EUR as its reference benchmark to meet its sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

How did the reference benchmark differ from a broad market index?

The Benchmark is aligned with the sustainable investment objective of the Financial Product, as it tracks the performance of securities issued for qualified "green" purposes which must have a clearly designated use of proceeds solely applied toward projects or activities that promote climate change mitigation or adaptation or other environmental sustainability purposes as outlined by the ICMA Green Bond Principles.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

Fund's objective is to invest at least 75% of its net asset in Green bonds. Compared to its benchmark, the fund is less exposed to Green bonds but invest, for the remaining part, in Sustainability and/or social bonds.

How did this financial product perform compared with the reference benchmark?

Sustainability KPI Name	Value	Coverage
% Green Bonds	95.22 % of NAV invested in green bonds	95.22 %

How did this financial product perform compared with the broad market index?

Not applicable or available.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Human Capital (the “Financial Product”)

Legal Entity Identifier: 2138002K7PEDAMUO9B79

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 44.09%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 54.34%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Human Capital Score
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability KPI Name	Value	Benchmark	Coverage
Human Capital Score	5.65 / 10		98.83 %
Women on Board	42.61 % of women on board (for corporates only)	40.39 % of women on board (for corporates only)	97.38 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of quarter of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Human Capital Score	2023	5.68 / 10		
Human Capital Score	2022	5.7 / 10	5.24 / 10	100 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM Sectorial policies and AXA IM ESG standards and (ii) exclusion criteria for Climate Transition Benchmarks (CTB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(c) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under –

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1916.7 Scope 2: 1099.684 Scope 3: 183119.469 Scope 1+2: 3016.384 Scope 1+2+3: 186114.063	Scope 1: 99 Scope 2: 99 Scope 3: 96 Scope 1+2: 99 Scope 1+2+3: 96	Scope 1: 100 Scope 2: 100 Scope 3: 97 Scope 1+2: 100 Scope 1+2+3: 97

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

		and, where applicable, national law		
--	--	-------------------------------------	--	--

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1916.7	Scope 1: 99	Scope 1: 100

Source: S&P Trucost, 2024

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

Largest investments	Sector (NACE level 2)	% Assets	Country
SPIE SA XPAR EUR	Architectural and engineering activities, technical testing and analysis	3.43%	FR
ERSTE GROUP BANK AG XWBO EUR	Financial service activities, except insurance and pension funding	3.34%	AT
STOREBRAND ASA XOSL NOK	Insurance, reinsurance and pension funding, except compulsory social security	3.14%	NO
PRYSMIAN SPA MTAA EUR	Manufacture of fabricated metal products, except machinery and equipment	3.09%	IT
ASR NEDERLAND NV XAMS EUR	Insurance, reinsurance and pension funding, except compulsory social security	3.08%	NL
ARCADIS NV XAMS EUR	Architectural and engineering activities, technical testing and analysis	2.85%	NL
EIFFAGE XPAR EUR	Construction of buildings	2.63%	FR
TELE2 AB-B SHS XSTO SEK	Telecommunications	2.58%	SE
CEMBRA MONEY BANK AG XSWX CHF	Financial service activities, except insurance and pension funding	2.58%	CH
INFRASTRUTTURE WIRELESS ITAL MTAA EUR	Civil engineering	2.57%	IT
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	2.54%	IT
INTERTEK GROUP PLC XLON GBP	Architectural and engineering activities, technical testing and analysis	2.54%	GB
GALENICA AG XSWX CHF	Wholesale trade, except of motor vehicles and motorcycles	2.4%	CH
PEARSON PLC XLON GBP	Publishing activities	2.34%	GB
AXFOOD AB XSTO SEK	Retail trade, except of motor vehicles and motorcycles	2.25%	SE

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	12.21%
Architectural and engineering activities, technical testing and analysis	8.82%
Publishing activities	7.54%

Manufacture of electrical equipment	0.99%
Other	0.95%
Manufacture of chemicals and chemical products	0.84%
Manufacture of other non-metallic mineral products	0.77%
Other manufacturing	0.76%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	6.72%	0.00%	0.00%
CapEx-based	7.58%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 37.38% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 54.34 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 1.57% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds ACT Multi Asset Optimal Impact (the “Financial Product”)

Legal Entity Identifier: 213800JXTZ2GEXH1UT05

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 61.06%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 36.85%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Investment Universe	Coverage
Carbon Intensity	163.93 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	277.36 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	98.65 %
Women on Board	37.41 % of women on board (for corporates only)	31.08 % of women on board (for corporates only)	98.19 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Carbon intensity	2023	198.1 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	291.63 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.6 %
% of companies in the GSS Watchlist & Non-compliant	2023	3.84 % of invested companies in the GSS Watchlist & Non-compliant	5.76 % of invested companies in the GSS Watchlist & Non-compliant	82.65 %
Carbon Delta Technology Opportunity (1.5C)	2022	21.61 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	8.91 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	93.74 %

N.B.: While Sustainability KPIs are reported based on an average of the data available at each end of quarter of the reference period, for technical reasons benchmarks are reported based on end of year data only. Therefore, the comparison should not be taken as such at face value and should not be interpreted as a breach of the binding elements disclosed into the Financial Product’s legal documentation, as figures disclosed for the benchmark are not based on the same accounting approach than for those disclosed for the Financial Product.

Principal adverse impacts are the most significant negative impacts of

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	84	100

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 10 Relative number: 10	Absolute number: 76 Relative number: 76

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 7717.859 Scope 2: 2966.047 Scope 3: 80331.102 Scope 1+2: 10683.907 Scope 1+2+3: 90745.828	Scope 1: 74 Scope 2: 74 Scope 3: 74 Scope 1+2: 74 Scope 1+2+3: 74	Scope 1: 89 Scope 2: 89 Scope 3: 88 Scope 1+2: 89 Scope 1+2+3: 88

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality

and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	2.56%	US

The portfolio proportions of investments presented above are an average over the reference period.

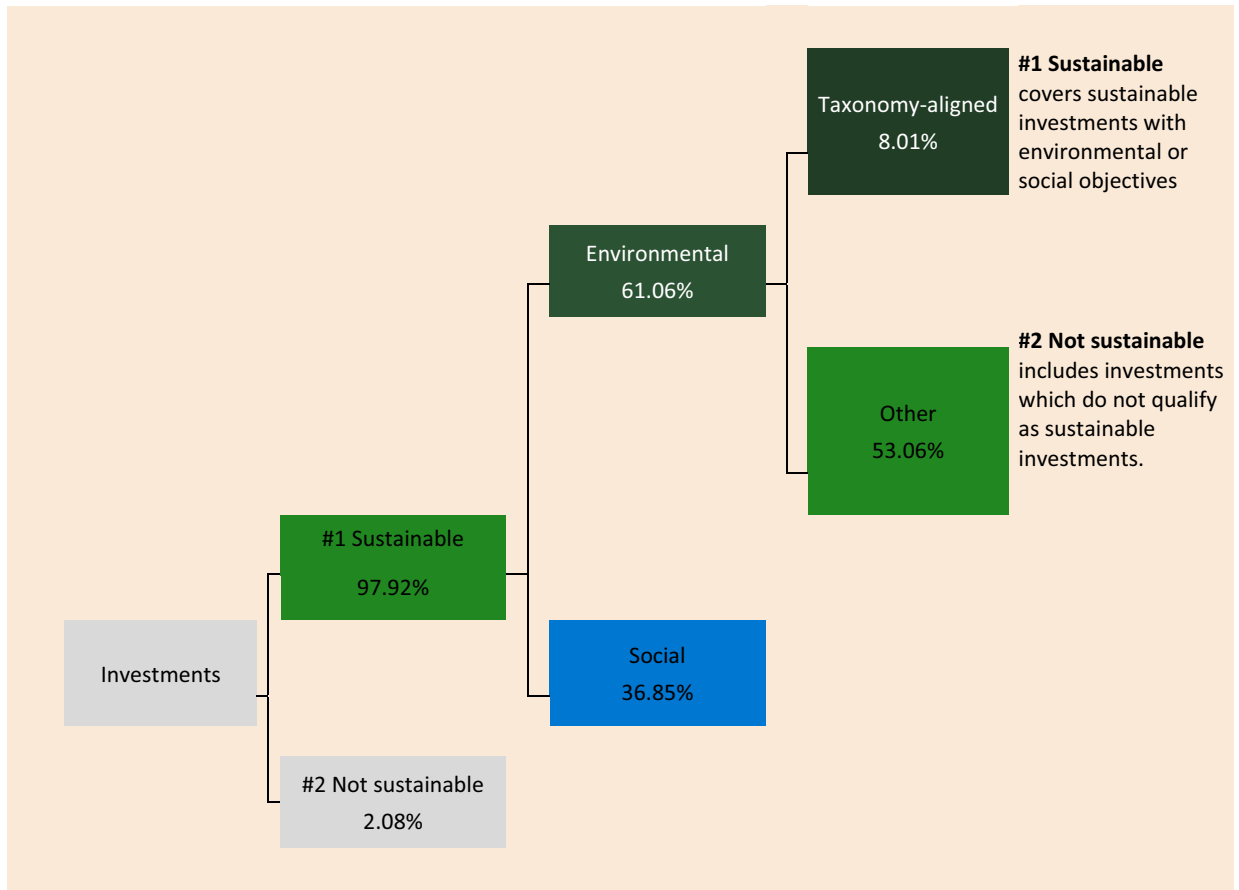

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2024-31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	10.99%
Financial service activities, except insurance and pension funding	10.64%
Electricity, gas, steam and air conditioning supply	10.05%
Publishing activities	9.25%
Manufacture of machinery and equipment n.e.c.	8.26%
Manufacture of computer, electronic and optical products	7.02%
Real estate activities	5.17%
Manufacture of chemicals and chemical products	4.82%
Other manufacturing	3.71%
Other	3.52%
Activities of extraterritorial organisations and bodies	3.06%
Manufacture of electrical equipment	2.53%
Insurance, reinsurance and pension funding, except compulsory social security	2.49%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.18%
Manufacture of motor vehicles, trailers and semi-trailers	2.14%
Telecommunications	1.79%

Waste collection, treatment and disposal activities, materials recovery	1.67%
Activities auxiliary to financial services and insurance activities	1.24%
Land transport and transport via pipelines	0.98%
Architectural and engineering activities, technical testing and analysis	0.96%
Water collection, treatment and supply	0.84%
Warehousing and support activities for transportation	0.78%
Manufacture of fabricated metal products, except machinery and equipment	0.78%
Scientific research and development	0.62%
Rental and leasing activities	0.55%
Manufacture of paper and paper products	0.51%
Legal and accounting activities	0.45%
Information service activities	0.38%
Manufacture of wearing apparel	0.37%
Computer programming, consultancy and related activities	0.34%
Manufacture of beverages	0.28%
Civil engineering	0.25%
Accommodation	0.24%
Retail trade, except of motor vehicles and motorcycles	0.23%
Manufacture of other non-metallic mineral products	0.22%
Postal and courier activities	0.18%
Manufacture of food products	0.17%
Construction of buildings	0.13%
Human health activities	0.12%
Office administrative, office support and other business support activities	0.07%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of s	0.02%
Education	0.01%
Manufacture of coke and refined petroleum products	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments			
	2024	2023	2022
Revenue-based	8.01%	0.00%	10.00%
CapEx-based	6.36%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2024

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 53.06% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 36.85 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 2.08% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
