**Corporate Governance and ALFI Code of Conduct**

The Board is responsible for ensuring that a high level of corporate governance is met and considers that the Fund has complied with the best practices in the Luxembourg funds industry. In particular the Board has adopted principles of the ALFI Code of Conduct (the "Code") which sets out principles of good governance for Luxembourg funds. The Board considers that the Fund has been in compliance with the principles of the Code in all material aspects throughout this financial period.

## Quarter 1

Economic activity remained strong in the United States in Q1 2024, less so in Europe, though it improved slightly compared to the last quarter of 2023. The trend was also slightly better in emerging economies. Inflation continued to fall, albeit gradually. Both the US Federal Reserve and the European Central Bank (ECB) indicated that they would wait a little longer before lowering their rates. On the markets, bond yields bounced back while equities continued their good momentum at the end of 2023.

### United States

The US economy continued to demonstrate remarkable strength, although many observers expected the key rate hikes of 2022 and 2023 to lead to recession. At the end of March, a third official estimate of Q4 2023 GDP showed growth of 3.4% at an annualised rate. Turning now to more recent data, labour market figures indicated the creation of more than 500,000 net jobs in January and February, which represents a strong and accelerating pace compared to Q4. For their part, business climate indicators for industrials signalled a slowdown in their decline over the first two months of the quarter, with the services sector still improving. Inflation continued to fall, albeit gradually. In February, the general consumer price index was 3.2% over 12 months after coming in at 3.4% in December, and the underlying index was 3.8% compared to 3.9% previously. At the start of the quarter the Federal Reserve's message sought to calm market expectations of a reduction in key rates in Q1. It indicated that the next move was highly likely to be a reduction, but it would only happen after more signs of a lasting slowdown in inflation.

### Eurozone

After near stagnation throughout 2023, some faint signs of improvement appeared in Q1. Q4 GDP figures showed zero growth. They were slightly negative in Germany, slightly positive in Italy and France and more positive in Spain. However, in March, PMI indices rose to a level that indicated an expansion in activity in the services sector, with a less severe contraction than at the end of 2023 in industry. Other indicators, such as Germany's IFO business climate index, also reported a very slight improvement. Likewise, the labour market continued to resist the economic gloom as the unemployment rate remained at 6.5% in February, its lowest level since the creation of the Eurozone. Inflation continued to slow, with the 12-month consumer price index dropping to 2.6% in February (from 2.9% in December) and the underlying index fell to 3.1% from 3.4%. Like the US Fed, the ECB has sought to dispel expectations of a rapid lowering of key rates. The message from its monetary policy committee meeting on 7 March was widely interpreted as a sign of a first reduction in June.

### Emerging Markets

The economic upturn in China was moderate and deflationary pressures persist. The Chinese authorities have preferred to lower interest rates instead of using budgetary weapons to target the reduction of local authority debt. Since the start of the year, growth has improved in emerging countries, even though it has remained in negative territory in central and eastern Europe. Inflation fell sharply in most countries in January, but in February some upside surprises and concerns about expectations emerged. Emerging countries' currencies were extremely volatile as they waited for greater visibility on US monetary policy, equities were not spared either. Central banks, most of which had started to ease their monetary policy, once again reacted quickly by holding off rate cuts in March and/or keeping them unchanged. Obviously, the geopolitical context continues to weigh heavily on investors' sentiment, who are particularly concerned about possible repercussions on global inflation.

### Rates

Rates remain on the high side, volatility remains strong. The German 10-year Bund yield exceeded 2.3% and that of the 10-year US bond 4.3%. There are two factors still driving markets — inflation's progress and what central bankers are saying. Markets are very confident that the ECB will lower rates in June. During its last committee meeting the ECB did indeed keep the door open for a rate reduction in June. However, Christine Lagarde has reiterated her call for patience when it comes to monetary policy. The ECB remains cautious about the pace of disinflation, particularly in the services sector, and will continue to monitor labour market development, which has shown great resilience. On the other hand, markets are less sure that the Fed will cut rates in June. The Fed is in no hurry to lower rates. It considers that underlying economic growth is more likely to bounce back and is stronger than in December. The Fed's rhetoric has not changed, despite the recent acceleration in inflation. It maintains the story that "inflation is gradually falling on a sometimes rocky path towards 2%".

### Equities

Risky assets started the year in the green. Investors bought into the "soft landing" scenario, causing equities markets to rise. In addition, good quarterly corporate results supported equities markets this quarter. The knock-on effect is that global stocks have benefited — the MSCI ACWI is up 9.1%. The US increased by 10% and outperformed Europe, which was up 7.6%. Eurozone markets are doing better, up 9.9%, with the Netherlands (up 17.9%) and Italy (up 15.7%) being the main contributors. Outside the Eurozone, the UK market is doing less well this quarter, only gaining 2.9%. Sticking with developed markets, the Japanese market was impressive this quarter, rising 18.3%. MSCI emerging markets index progressed (up 4.0%) driven by the outperformance of the Taiwanese market, which rose 16.9%. At the European sector level, so-called cyclical shares (up 10.4%) prevail over defensive stocks (up 2.9%). These were led by technology (up 17.9%), cyclical consumer goods (up 12.3%) and the insurance sector (up 11.9%). Utilities (-5.6%) and the property sector (-1.4%) were the main detractors this quarter. In Europe growth stocks (up 10.7%) are outperforming value stocks (up 4.4%).

## Quarter 2

Economic figures showed diverging trends on both sides of the Atlantic. In the US, activity is slowing slightly from a previously vigorous dynamic and inflation has resumed its downward trend. In the Eurozone the business climate is improving after several difficult quarters and inflation has reaccelerated modestly after several months of decline. The ECB initiated a first rate reduction on 6 June, while the Fed did not make any precise statement about the date of its first move. On the markets, bonds performed negatively and remain volatile, particularly in Europe, whereas stocks continue to rise.

### United States

After several quarters of good resilience, the US economy has started to show signs of weakness in the second quarter. Although US figures continued to be a testament to powerful activity (the ISM manufacturing index returned to positive territory for the first time since November 2022 and retail sales were up), the first signs of weakness came with Q1 GDP growth being below expectations. US indicators released in May, for the most part, signalled a moderate slowdown in activity, with the ISM indices returning to a slight contraction in industry. This trend was confirmed in June. The message was different in services, where prospects improved. The

labour market was also contradictory with good progress in jobs creation but the unemployment rate moved up to 4%. The downturn in prospects for consumption was, however, confirmed with disappointing retail sales which foreshadowed weak growth in Q2.

Inflation's downward trend seemed to halt at the start of the quarter. It was finally validated with PCE inflation (the Federal Reserve's preferred measure) at an annualised rate of 2.6%. However, inflationary pressures were confined to services. In this context the Federal Reserve refrained from announcing any timetable for rate cuts, indicating it first needs more signs of disinflation. Fed officials raised their inflation forecasts for 2024 slightly and shifted the sequence of key rate cuts over time without changing the total value of -250 bps by the end of 2026. At the end of June, several Fed governors seemed reluctant to support rate cuts before the end of the year.

### Europe

The improvement in the European economic situation was the nice surprise of the second quarter. Although still weak in absolute terms, figures from the Eurozone clearly surprised on the upside in April from very pessimistic expectations. Thus the major indicators of the economic climate (Sentix, ZEW and PMI) overall signalled a slight improvement in activity, despite a situation that remains eroded in the manufacturing sector. June confirmed a slight recovery in economies with notable signs of improvement, which augurs moderate expansion in the second quarter.

Even if the overall inflation trend in the Eurozone is downward, it is resisting in service activities, which are its main driver. Inflation statistics for May indicate an uptick to 2.6% year-on-year, compared to 2.4% in April, falling again to 2.5% in June at an annualised rate. This is mainly due to inflation in services which is only expected to decrease gradually. The annual base inflation rate, which excludes volatile food and energy prices, reached 2.7% in April and 2.9% in June, above market expectations. Among the major economies, inflation (harmonised at EU level) fell in Germany (2.5%), France (2.5%) and Spain (3.5%), while it rose in Italy (0.9%).

Despite the backdrop of volatile inflation and resumption of economic activity, the ECB reduced its headline rates on 6 June by 25 basis points for the first time in almost five years, cutting the deposit rate to 3.75% from 4% in line with market expectations. Christine Lagarde, however, did not comment on future rate cuts. The temporary divergence between the Fed and the ECB had a limited effect on the euro which fell from 1.09 to 1.07 against the US dollar.

Although inflation is back down at 2% in the United Kingdom, the Bank of England maintained its rates at 5.25% before the UK elections on 4 June, which revealed the uncertainty about how it would perform in the short term.

### Asia

In Japan inflation data for May was lower than consensus expectation and growth statistics for Q1 have been lowered. Inflation (excluding energy and fresh produce) was at 2.1% year-on-year, lower than the 2.2% forecast. Inflation's return to the Bank of Japan's (BoJ) target was slightly quicker than forecast. The market is logically anticipating the BoJ should maintain its short-term interest rates, leading to a further fall in the yen (the USD/JPY broke 160 at the end of the quarter).

China remains in the grip of a property market that is failing to stabilise, with a continued decline in volumes and prices. The latest measures announced by the Chinese government suggest a turnaround to this situation which has been weighing on consumption and employment for several quarters. Moving from low-impact technical measures to more engaging policies towards the construction sector, the Chinese authorities are looking to confirm their desire to achieve the 5% growth target this year. In a tense geopolitical context, China is accused by its trading partners of unfair competition in many sectors, leading to an increase in US customs tariffs and a potentially similar move by the EU. But the most significant risk remains weak interior demand, confirmed by the June PMI indicators.

### Emerging Markets

Although inflation generally seems to be under control in emerging economies, all eyes are on the Federal Reserve, which is expected to cut rates only in the second half of 2024, and which in turn determines moves of the central banks of emerging economies. Malaysia, Mexico, the South Africa Reserve Bank (SARB) the National Bank of Poland (NB) and the Turkish Central Bank (TCMB) are among the central banks that have kept their rates unchanged, while the Czech National Bank (CNB) and the National Bank of Hungary (NBH) have reduced their rates by 50 basis points, with the Central Bank of Bulgaria (BCB) and the Central Bank of Peru (BCRP) lowering theirs by 25 bps. The People's Bank of China, is still constrained by its preference for currency stability and continues to keep rates constant.

On 4 June, India announced the results of its national elections. The national democratic alliance, led by the Bharatiya Janta Party (BJP) was re-elected with a very narrow majority. Even so, Modi obtained the support of his allies in the coalition which allowed him to form a government for the third consecutive time. After the good performance of Indian stocks over several quarters, investors will be sensitive to the progress of ambitious economic reforms and public finances.

### Rates

Bond markets remain volatile, following a halt to the decline in inflation in the advanced economies, the absence of a landing for the US economy but an acceleration in European economies. The US 10-year bond yield is approaching 4.5% while 2-year rates remain close to 5%. In Europe the German 10-year bond yield has exceeded 2.6% and 3% for the OAT. Rate spreads among the main European sovereign issuers have remained stable, but we note an unfavourable move for France after its rating was downgraded by Standard & Poor's and the announcement of the dissolution of the national assembly following the defeat of the presidential movement in the European elections.

Since the start of the year, with US inflation proving more stubborn than forecast, the US Federal Reserve's rhetoric is now "not to be in a hurry to lower rates". This has been a source of volatility on the bond markets. In contrast, inflation in Europe now appears to be more or less under control and the ECB has initiated a first rate cut. Credit markets are developing positively thanks to resilient economic activity, strong balance sheets and the expectation of rate cuts by the central banks.

### Equities

Despite a temporary correction in April following the release of US inflation data which many feared would lead to a new hike in the Fed rates, equities markets have rebounded through the quarter thanks to the publication of reassuring Q1 results.

The MSCI World index rose 2.6% with extremely contrasting regional performances. The US market was up 4.1%, significantly outperforming Europe (up 1.65%) and Japan (down 2.5%) in dollar terms. The French market was impacted by the national political context, dropping around 6% in June.

The S&P500 (TR) index was up 4.3% in the second quarter and 3.6% in June alone. The quarter did not start well, with a fallback in April as a series higher-than-expected inflation reports pushed interest rates higher and fuelled concerns of a new rate hike by the Fed. Concerns about inflation were later dispelled and the stock market reached new highs.

We note a change in the dynamics of equity markets with less concentration in very large US stocks (magnificent 7) and an outperformance in Europe in certain phases, investors looking for sectors or regions less expensive than the United States. However, the political uncertainty in France followed by the dissolution of the national assembly led to non-European investors retreating. But the big surprise must be the rebound in the Chinese market (up 5.4%) following government announcements of greater support for the property sector and despite profit-taking in June. Despite the rise in long-term rates, growth stocks continue to significantly outperform the *value* segment, even though we note renewed interest in discounted sectors and the rebound of European banking stocks in the first part of the quarter.

### Quarter 3

Economic figures showed diverging trends on both sides of the Atlantic. In the US, activity is slowing slightly from a previously vigorous dynamic and inflation has resumed its downward trend. In the Eurozone the business climate is improving after several difficult quarters and inflation has reaccelerated modestly after several months of decline. The ECB initiated a first rate reduction on 6 June, while the Fed did not make any precise statement about the date of its first move. On the markets, bonds performed negatively and remain volatile, particularly in Europe, whereas stocks continue to rise.

#### United States

After several quarters of good resilience, the US economy has started to show signs of weakness in the second quarter. Although US figures continued to be a testament to powerful activity (the ISM manufacturing index returned to positive territory for the first time since November 2022 and retail sales were up), the first signs of weakness came with Q1 GDP growth being below expectations. US indicators released in May, for the most part, signalled a moderate slowdown in activity, with the ISM indices returning to a slight contraction in industry. This trend was confirmed in June. The message was different in services, where prospects improved. The labour market was also contradictory with good progress in jobs creation but the unemployment rate moved up to 4%. The downturn in prospects for consumption was, however, confirmed with disappointing retail sales which foreshadowed weak growth in Q2.

Inflation's downward trend seemed to halt at the start of the quarter. It was finally validated with PCE inflation (the Federal Reserve's preferred measure) at an annualised rate of 2.6%. However, inflationary pressures were confined to services. In this context the Federal Reserve refrained from announcing any timetable for rate cuts, indicating it first needs more signs of disinflation. Fed officials raised their inflation forecasts for 2024 slightly and shifted the sequence of key rate cuts over time without changing the total value of -250 bps by the end of 2026. At the end of June, several Fed governors seemed reluctant to support rate cuts before the end of the year.

#### Europe

The improvement in the European economic situation was the nice surprise of the second quarter. Although still weak in absolute terms, figures from the Eurozone clearly surprised on the upside in April from very pessimistic expectations. Thus the major indicators of the economic climate (Sentix, ZEW and PMI) overall signalled a slight improvement in activity, despite a situation that remains eroded in the manufacturing sector. June confirmed a slight recovery in economies with notable signs of improvement, which augurs moderate expansion in the second quarter.

Even if the overall inflation trend in the Eurozone is downward, it is resisting in service activities, which are its main driver. Inflation statistics for May indicate an uptick to 2.6% year-on-year, compared to 2.4% in April, falling again to 2.5% in June at an annualised rate. This is mainly due to inflation in services which is only expected to decrease gradually. The annual base inflation rate, which excludes volatile food and energy prices, reached 2.7% in April and 2.9% in June, above market expectations. Among the major economies, inflation (harmonised at EU level) fell in Germany (2.5%), France (2.5%) and Spain (3.5%), while it rose in Italy (0.9%).

Despite the backdrop of volatile inflation and resumption of economic activity, the ECB reduced its headline rates on 6 June by 25 basis points for the first time in almost five years, cutting the deposit rate to 3.75% from 4% in line with market expectations. Christine Lagarde, however, did not comment on future rate cuts. The temporary divergence between the Fed and the ECB had a limited effect on the euro which fell from 1.09 to 1.07 against the US dollar.

Although inflation is back down at 2% in the United Kingdom, the Bank of England maintained its rates at 5.25% before the UK elections on 4 June, which revealed the uncertainty about how it would perform in the short term.

#### Asia

In Japan inflation data for May was lower than consensus expectation and growth statistics for Q1 have been lowered. Inflation (excluding energy and fresh produce) was at 2.1% year-on-year, lower than the 2.2% forecast. Inflation's return to the Bank of Japan's (BoJ) target was slightly quicker than forecast. The market is logically anticipating the BoJ should maintain its short-term interest rates, leading to a further fall in the yen (the USD/JPY broke 160 at the end of the quarter).

China remains in the grip of a property market that is failing to stabilise, with a continued decline in volumes and prices. The latest measures announced by the Chinese government suggest a turnaround to this situation which has been weighing on consumption and employment for several quarters. Moving from low-impact technical measures to more engaging policies towards the construction sector, the Chinese authorities are looking to confirm their desire to achieve the 5% growth target this year. In a tense geopolitical context, China is accused by its trading partners of unfair competition in many sectors, leading to an increase in US customs tariffs and a potentially similar move by the EU. But the most significant risk remains weak interior demand, confirmed by the June PMI indicators.

### Emerging Markets

Although inflation generally seems to be under control in emerging economies, all eyes are on the Federal Reserve, which is expected to cut rates only in the second half of 2024, and which in turn determines moves of the central banks of emerging economies. Malaysia, Mexico, the South Africa Reserve Bank (SARB) the National Bank of Poland (NB) and the Turkish Central Bank (TCMB) are among the central banks that have kept their rates unchanged, while the Czech National Bank (CNB) and the National Bank of Hungary (NBH) have reduced their rates by 50 basis points, with the Central Bank of Bulgaria (BCB) and the Central Bank of Peru (BCRP) lowering theirs by 25 bps. The People's Bank of China, is still constrained by its preference for currency stability and continues to keep rates constant.

On 4 June, India announced the results of its national elections. The national democratic alliance, led by the Bharatiya Janta Party (BJP) was re-elected with a very narrow majority. Even so, Modi obtained the support of his allies in the coalition which allowed him to form a government for the third consecutive time. After the good performance of Indian stocks over several quarters, investors will be sensitive to the progress of ambitious economic reforms and public finances.

### Rates

Bond markets remain volatile, following a halt to the decline in inflation in the advanced economies, the absence of a landing for the US economy but an acceleration in European economies. The US 10-year bond yield is approaching 4.5% while 2-year rates remain close to 5%. In Europe the German 10-year bond yield has exceeded 2.6% and 3% for the OAT. Rate spreads among the main European sovereign issuers have remained stable, but we note an unfavourable move for France after its rating was downgraded by Standard & Poor's and the announcement of the dissolution of the national assembly following the defeat of the presidential movement in the European elections.

Since the start of the year, with US inflation proving more stubborn than forecast, the US Federal Reserve's rhetoric is now "not to be in a hurry to lower rates". This has been a source of volatility on the bond markets. In contrast, inflation in Europe now appears to be more or less under control and the ECB has initiated a first rate cut. Credit markets are developing positively thanks to resilient economic activity, strong balance sheets and the expectation of rate cuts by the central banks.

### Equities

Despite a temporary correction in April following the release of US inflation data which many feared would lead to a new hike in the Fed rates, equities markets have rebounded through the quarter thanks to the publication of reassuring Q1 results.

The MSCI World index rose 2.6% with extremely contrasting regional performances. The US market was up 4.1%, significantly outperforming Europe (up 1.65%) and Japan (down 2.5%) in dollar terms. The French market was impacted by the national political context, dropping around 6% in June.

The S&P500 (TR) index was up 4.3% in the second quarter and 3.6% in June alone. The quarter did not start well, with a fallback in April as a series higher-than-expected inflation reports pushed interest rates higher and fuelled concerns of a new rate hike by the Fed. Concerns about inflation were later dispelled and the stock market reached new highs.

We note a change in the dynamics of equity markets with less concentration in very large US stocks (magnificent 7) and an outperformance in Europe in certain phases, investors looking for sectors or regions less expensive than the United States. However, the political uncertainty in France followed by the dissolution of the national assembly led to non-European investors retreating. But the big surprise must be the rebound in the Chinese market (up 5.4%) following government announcements of greater support for the property sector and despite profit-taking in June. Despite the rise in long-term rates, growth stocks continue to significantly outperform the *value* segment, even though we note renewed interest in discounted sectors and the rebound of European banking stocks in the first part of the quarter.

### Quarter 4

Economic activity remained robust in Q4 although decelerating in the US and disappointing in the Eurozone. Growth in most of the emerging economies slowed while at the same time remaining strong. Inflation has continued to fall in most countries. The US Federal Reserve and the European Central Bank indicated that they are coming to the end of the cycle of key rate hikes, while several central banks in the emerging economies have lowered theirs. On the markets, bond yields rose and shares fell in October, but this trend reversed in November and December so that at the end of the year bond yields were lower than at the beginning of the quarter, while stocks were clearly rising, with several indices even reaching all-time highs.

#### United States

Although the American economy continued to show surprising resistance to the sharp rise in interest rates, the trend was nonetheless towards a slowdown. The Q3 growth figures released in Q4 showed very sustained activity (GDP growth of 4.9% at an annualised rate according to the December review). However, the most recent job market figures have shown that they may be beginning to run out of steam, so despite still abundant job creation (close to 180,000 a month on average in Q4), the unemployment rate has stabilised at 3.7% in December, compared to 3.4% at its lowest in April. Other monthly figures, such as those for retail sales, durable goods orders and industrial production, are signalling that Q4 growth will likely be significantly weaker than Q3. On the other hand, inflation, although above the Fed's 2% target, has clearly fallen. In November, the increase over 12 months in the general price index was only 3.1%, compared to 3.7% in August, with the underlying index at 4.0%, compared to 4.3%. The Federal Reserve has not changed its key rates after increasing them in July. It indicated that it was satisfied with their current level and that the pace of lowering them in the future was still under discussion.

#### Eurozone

Economic activity has remained particularly sluggish in the Eurozone, with the rise in interest rates adding to the specific difficulties on the industrial sector. At the end of November the review of Q3 GDP figures showed a very slight fall (down 0.1% for the whole region, including modest decreases in France and Germany, a negligible increase in Italy and a slightly bigger increase in Spain. This erosion is part of the quasi-stagnation seen since the beginning of the year. The figures for the start of Q4 did not show any notable improvement. The labour market, however, is still in relatively good shape, with the unemployment rate remaining at 6.5% in October, its lowest since the creation of the Eurozone. The good news came from inflation with the pace of rises in the general price index slowing, reaching 2.9% over 12 months in December (after being at 4.4% in September) and the underlying index slowed to 3.4% (previously 4.5%). The European Central Bank has not changed its key rates

after increasing them in September. After its monetary policy committee meeting in December it again stated it was confident that the current level of rates would make it possible to further bring down inflation, while indicating that any discussion on possible rate cuts was premature.

### Emerging Markets

China continued to be cautious in developing economic policies in Q4, against a backdrop of a very uneven recovery. Public spending on infrastructure has been ramped up but consumption has slowed and inflation has settled in negative territory. In Brazil inflation growth has continued to slow, while in India consumption was more robust than investment. As a whole, in the emerging economies, domestic demand has slowed and inflation has continued to drop off, while remaining below central banks' figures in the majority of cases. Central banks have continued lowering their rates. The Brazilian central bank went ahead with several cuts of 50 bps, whereas the Chilean central bank accelerated its pace with cuts of 75 bps. Others joined in, for example the central banks of Colombia and the Czech Republic. The US Federal Reserve's apparently more restrictive stance has reduced pressure on exchange rates, which had previously led to the Indonesian central bank to raise rates and Chile's to slow down its cuts. Finally, in Argentina, the new President Milei started his tenure with a 50% devaluation of the peso and an ambitious plan to liberalise the economy.

### Equities

Stock markets fell in October, but rebounded strongly based on a cut in long-term rates. Over the quarter the MSCI World AC was up 9%. At the regional level the US (up 11.5%) outperformed Europe (up 5.3%). Inside the Eurozone (up 7.5%) the Netherlands (up 14.8%) and Portugal (up 10.2%) outperformed their neighbours. The rest of the member states are in the green, with France (up 5.6%) and Spain (up 6.7%) bringing up the rear. Outside the Eurozone, the Swedish market stands out at the head of the field (up 12.2%) followed by the UK market (up 1.6%) and Switzerland (up 1.3%). Japan (up +2.1%) in local currency, continues to benefit from the fall in the yen as well as the resilience of its economy. Finally, the MSCI Emerging Markets index was up 5.2% despite the underperformance of the Chinese market, which was down 5%. At the European sector level value stocks (up 3.4%) underperformed growth stock (up 7.2%). In the lead were the property sector (up 22.6%) and IT (up 18.3%), sensitive to interest rates. The energy (down 2.6%) and basic consumer goods sectors were the only ones to end the quarter in negative territory.

### Rates

Interest rate markets were marked by a sharp fall in rates across the entire curve. The US 10-year rate closed the year at almost 3.8% and the German 10-year Bund at around 2%. The market also expects the Fed and the ECB to begin a round of rate cuts in March. This rapid reduction in rates is explained by: 1) a greater than expected drop in inflation in developed economies; 2) a change in the Fed's tone, which has now returned to the point where its two mandates, inflation and jobs, are significant. The Fed is reassured by the decline in inflation, the members of the FOMC are now very attentive to the impact of rising rates on growth, with the aim of avoiding an excessive slowdown in activity. The Fed therefore does not want to hold back the economy longer than is necessary; 3) economic growth that has continued to surprise on the downside in the Eurozone. However, the labour market in the Eurozone is very solid. Markets now expect inflation to return rapidly to 2% without a recession.
