| <b>Risk considerations for the Sub-fund</b> | <p>Investors should note that, in addition to the above mentioned risks, the investment strategy and risks inherent to the Sub-fund are not typically encountered in traditional long only funds. The Sub-fund and/or UCITS/other UCIs it invests in may use derivatives as part of its investment strategy and such investments are inherently volatile and the Sub-fund could potentially be exposed to additional risks and costs should the market move against it. The Sub-fund may also use derivatives to take short positions in some investments. Should the value of such investment increase, it will have a negative effect on the Sub-fund's value. In extreme market conditions, the Sub-fund may be faced with theoretically unlimited losses on these synthetic short positions. Such extreme market conditions could mean that Investors could, in certain circumstances, face minimal or no returns, or may even suffer a loss on such investments.</p> <p>The investment risk will be measured using quantitative techniques. The investment risk of using derivatives is also incorporated in these quantitative techniques. For more information, please consult <a href="#">APPENDIX III – RISK MANAGEMENT PROCESS</a>.</p> |

See Section 3.1 for a more detailed description of all Fees and Expenses.

## APPENDIX II – INVESTMENT RESTRICTIONS

Under the Articles of Incorporation of the Company, the Board of Directors has broad investment powers. In connection with the implementation of the above policy, the Board has fixed the following investment restrictions. In this context, the following terms shall mean the following:

### Definitions:

|                            |                                                                                                                                                                                                                                                                                                          |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| "EU"                       | European Union;                                                                                                                                                                                                                                                                                          |
| "Eligible State"           | any Member State of the EU or any other state in Eastern and Western Europe, Asia, Africa, Australia, North and South America and Oceania;                                                                                                                                                               |
| "Member State"             | means a Member State of the EU as defined in the Law;                                                                                                                                                                                                                                                    |
| "money market instruments" | shall mean instruments normally dealt in on the money market which are liquid, and have a value which can be accurately determined at any time;                                                                                                                                                          |
| "Regulated Market"         | a market within the meaning of Article 4.1.14 of Directive 2004/39/EC or any other Directive amending or replacing Directive 2004/39/EC and any other market which is regulated, operates regularly and is recognized and open to the public in an Eligible State;                                       |
| "third country"            | A state other than a Member State;                                                                                                                                                                                                                                                                       |
| "transferable securities"  | shall mean: <ul style="list-style-type: none"> <li>- Shares and other securities equivalent to Shares,</li> <li>- bonds and other debt instruments,</li> <li>- any other negotiable securities which carry the right to acquire any such transferable securities by subscription or exchange;</li> </ul> |
| "UCITS"                    | an Undertaking for Collective Investment in Transferable Securities authorized pursuant to Directive 2009/65/EEC, as may be amended;                                                                                                                                                                     |
| "other UCI"                | an Undertaking for Collective Investment within the meaning of the first and second indents of Article 1 (2) of Directive 2009/65/EEC, as may be amended.                                                                                                                                                |

- I. (1) The Company, for each Sub-fund, may invest in:
- a) transferable securities and money market instruments admitted to or dealt in on a Regulated Market;
  - b) recently issued transferable securities and money market instruments, provided that the terms of issue include an undertaking that application will be made for admission to official listing on a Regulated Market and such admission is secured within one year of the issue;
  - c) units of UCITS and/or other UCI, whether situated in a Member State or not, provided that:
    - such other UCIs have been authorized under the laws of any Member State or under the laws of those countries which can provide that they are subject to supervision considered by the CSSF to be equivalent to that laid down in European Community law and that cooperation between authorities is sufficiently ensured,
    - the level of protection for unitholders in such other UCIs is equivalent to that provided for unitholders in a UCITS, and in particular that the rules on assets segregation, borrowing, lending, and uncovered sales of transferable securities and money market instruments are equivalent to the requirements of Directive, 2009/65/EEC,
    - the business of such other UCIs is reported in half-yearly and annual reports to enable an assessment of the assets and liabilities, income and operations over the reporting period,
    - no more than 10% of the assets of the UCITS or of the other UCIs, whose acquisition is contemplated, can, according to their constitutional documents, in aggregate be invested in units of other UCITS or other UCIs;
  - d) deposits with credit institutions which are repayable on demand or have the right to be withdrawn, and maturing in no more than 12 months, provided that the credit institution is incorporated in a Member State or if the credit institution is incorporated in a third country provided that it is subject to prudential rules considered by the Luxembourg regulator as equivalent to those laid down in Community law;
  - e) financial derivative instruments, including equivalent cash-settled instruments, dealt in on a Regulated Market and/or financial derivative instruments dealt in over-the-counter ("OTC derivatives"), provided that:
    - the underlying consists of instruments covered by this section (I) (1), financial indices, interest rates, foreign exchange rates or currencies, in which the Sub-funds may invest according to their investment objective,
    - the counterparties to OTC derivative transactions are institutions subject to prudential supervision and belonging to categories approved by the CSSF,
    - the OTC derivatives are subject to reliable and verifiable valuation on a daily basis and can be sold, liquidated or closed by an offsetting transaction at any time at their fair value at the Company's initiative;
  - f) money market instruments other than those dealt in on a Regulated Market and referred to under "Definitions", if the issue or the issuer of such instruments are themselves regulated for the purpose of protecting investors and savings, and provided that such instruments are:
    - issued or guaranteed by a central, regional or local authority or by a central bank of a Member State, the European Central Bank, the EU or the European Investment Bank, a third country or, in case of a Federal State, by one of the members making up the federation, or by a public international body to which one or more Member States belong, or
    - issued by an undertaking any securities of which are dealt in on Regulated Markets, or
    - issued or guaranteed by an establishment subject to prudential supervision, in accordance with criteria defined by Community law, or by an establishment which is subject to and complies with prudential rules considered by the Luxembourg regulator to be at least as stringent as those laid down by Community law, or
    - issued by other bodies belonging to the classes approved by the Luxembourg supervisory authority provided that investments in such instruments are subject to investor protection equivalent to that laid down in the first, the second or the third indent and provided that the

issuer is a company whose capital and reserves amount to at least EUR 10 million and which presents and publishes its annual accounts in accordance with Directive 78/660/EEC<sup>1</sup>, is an entity which, within a group of companies which includes one or several listed companies, is dedicated to the financing of the group or is an entity which is dedicated to the financing of securitization vehicles which benefit from a banking liquidity line;

- (2) In addition, the Company may invest a maximum of 10% of the net assets of any Sub-fund in transferable securities and money market instruments other than those referred to under (1) above.

II. The Company may hold ancillary liquid assets.

- III. a) (i) The Company will invest no more than 10% of the net assets of any Sub-fund in transferable securities or money market instruments issued by the same issuing body.
- (ii) The Company may not invest more than 20% of the net assets of any Sub-fund in deposits made with the same body. The risk exposure of a Sub-fund to a counterparty in a derivative transaction, that is not centrally cleared through a central counterparty authorised in accordance with Article 14 of Regulation (EU) No 648/2012 or recognised in accordance with Article 25 of that Regulation may not exceed 10% of its net assets when the counterparty is a credit institution referred to in I. d) above or 5% of its net assets in other cases.
- b) Moreover, where the Company holds on behalf of a Sub-fund investments in transferable securities and money market instruments of issuing bodies which individually exceed 5% of the net assets of such Sub-fund, the total of all such investments must not account for more than 40% of the total net assets of such Sub-fund.

This limitation does not apply to deposits and derivative transactions made with financial institutions subject to prudential supervision.

Notwithstanding the individual limits laid down in paragraph a), the Company may not combine for each Sub-fund where this would lead to investment of more than 20% of its assets in a single body, any of the following:

- investments in transferable securities or money market instruments issued by that body,
  - deposits made with that body, or
  - exposures arising from derivative transactions undertaken with that body that are not centrally cleared through a central counterparty authorised in accordance with Article 14 of Regulation (EU) No 648/2012 or recognised in accordance with Article 25 of that Regulation.
- c) The limit of 10% laid down in sub-paragraph a) (i) above is increased to a maximum of 35% in respect of transferable securities or money market instruments which are issued or guaranteed by a Member State, by its public local authorities, or by another Eligible State or by public international bodies to which one or more Member States belong.
- d) The limit of 10% laid down in sub-paragraph a) (i) is increased to 25% for covered bonds as defined under article 3, point 1 of Directive (EU) 2019/2162 of the European Parliament and of the Council of 27 November 2019 on the issue of covered bonds and covered bond public supervision and amending Directives 2009/65/EC and 2014/59/EU, and for certain bonds when they are issued before 8 July 2022 by a credit institution which has its registered office in a Member State and is subject by law, to special public supervision designed to protect bondholders. In particular, sums deriving from the issue of these bonds before 8 July 2022 must be invested in conformity with the law in assets which, during the whole period of validity of the bonds, are capable of covering claims attaching to the bonds and which, in case of bankruptcy of the issuer, would be used on a priority basis for the repayment of principal and payment of the accrued interest.
- If a Sub-fund invests more than 5% of its net assets in the bonds referred to in this sub-paragraph and issued by one issuer, the total value of such investments may not exceed 80% of the net assets of the Sub-fund.
- e) The transferable securities and money market instruments referred to in paragraphs c) and d) shall not be included in the calculation of the limit of 40% in paragraph b).

<sup>1</sup> This directive has been repealed and replaced by Directive 2013/34/EU.

The limits set out in sub-paragraphs a), b), c) and d) may not be aggregated and, accordingly, investments in transferable securities or money market instruments issued by the same issuing body, in deposits or in derivative instruments effected with the same issuing body may not, in any event, exceed a total of 35% of any Sub-fund's net assets.

Companies which are part of the same group for the purposes of the establishment of consolidated accounts, as defined in accordance with Directive 83/349/EEC or in accordance with recognized international accounting rules, are regarded as a single body for the purpose of calculating the limits contained in this paragraph III).

The Company may cumulatively invest up to 20% of the net assets of a Sub-fund in transferable securities and money market instruments within the same group.

- f) **Notwithstanding the above provisions, the Company is authorized to invest up to 100% of the net assets of any Sub-fund, in accordance with the principle of risk spreading, in transferable securities and money market instruments issued or guaranteed by a Member State, by its local authorities or agencies, or by another member state of the OECD or by Singapore, or by Brazil, or by India, or by Indonesia, or by Russia or by South Africa or by public international bodies of which one or more Member States are members, provided that such Sub-fund must hold securities from at least six different issues and securities from one issue do not account for more than 30% of the net assets of such Sub-fund.**

- IV. a) Without prejudice to the limits laid down in paragraph V., the limits provided in paragraph III. are raised to a maximum of 20% for investments in Shares and/or debt securities issued by the same issuing body if the aim of the investment policy of a Sub-fund is to replicate the composition of a certain stock or debt securities index which is sufficiently diversified, represents an adequate benchmark for the market to which it refers, is published in an appropriate manner and disclosed in the relevant Sub-fund's investment policy.
- b) The limit laid down in paragraph a) is raised to 35% where this proves to be justified by exceptional market conditions, in particular on Regulated Markets where certain transferable securities or money market instruments are highly dominant. The investment up to this limit is only permitted for a single issuer.
- V. a) The Company may not acquire Shares carrying voting rights which should enable it to exercise significant influence over the management of an issuing body.
- b) The Company may acquire no more than:

- 10% of the non-voting Shares of the same issuer;
- 10% of the debt securities of the same issuer;
- 10% of the money market instruments of the same issuer.

These limits under second and third indents may be disregarded at the time of acquisition, if at that time the gross amount of debt securities or of the money market instruments or the net amount of the instruments in issue cannot be calculated.

- c) The provisions of paragraph V. shall not be applicable to transferable securities and money market instruments issued or guaranteed by a Member State or its local authorities or by any other Eligible State, or issued by public international bodies of which one or more Member States of the EU are members.

The provisions of this paragraph V. are also waived as regards Shares held by the Company in the capital of a company incorporated in a third country of the EU which invests its assets mainly in the securities of issuing bodies incorporated in that State, where under the legislation of that State, such a holding represents the only way in which the Company can invest in the securities of issuing bodies of that State provided that the investment policy of the company from the third country of the EU complies with the limits laid down in paragraph III., V. and VI. a), b), c) and d).

- VI. a) The Company may acquire units of the UCITS and/or other UCIs referred to in paragraph I) (1) c), provided that no more than 10% of a Sub-fund's net assets be invested in the units of UCITS or other UCI unless otherwise provided expressly in the specifications of a Sub-fund described under Appendix I.

- b) The underlying investments held by the UCITS or other UCIs in which the Company invests do not have to be considered for the purpose of the investment restrictions set forth under III above.
- c) When the Company, the Management Company or the Portfolio Managers invest in the units of UCITS and/or other UCIs that are managed, directly or by delegation, by the Management Company or by any other company with which the Management Company is linked by common management or control, or by a direct or indirect stake of more than 10% of the capital or votes, or any other entity of an Affiliated Entity, the Management Company or other company cannot charge management, subscription or redemption fees on account of the Company's investment in the units of such UCITS and/or other UCIs.
- d) The Company may acquire no more than 25% of the units of the same UCITS or other UCI. This limit may be disregarded at the time of acquisition if at that time the gross amount of the units in issue cannot be calculated. In case of a UCITS or other UCI with multiple compartments, this restriction is applicable by reference to all units issued by the UCITS or other UCI concerned, all compartments combined.
- e) Units of UCITS and/or other UCIs in which the Company invests may have different investment restrictions. Robeco carries out proportionate due diligence to ensure that the investments in UCITS or other UCIs fit with the investment strategies or restrictions set out in the Company's investment restrictions, the Articles of Incorporation and the Prospectus.

- VII. The Company shall ensure for each Sub-fund that the global exposure relating to derivative instruments does not exceed the net assets of the relevant Sub-fund.

The exposure is calculated taking into account the current value of the underlying assets, the counterparty risk, foreseeable market movements and the time available to liquidate the positions. This shall also apply to the following sub-paragraphs.

If the Company invests in financial derivative instruments, the exposure to the underlying assets may not exceed in aggregate the investment limits laid down in paragraph III above. When the Company invests in index-based financial derivative instruments, these investments do not have to be combined to the limits laid down in paragraph III.

When a transferable security or money market instrument embeds a derivative, the latter must be taken into account when complying with the requirements of this paragraph VII.

- VIII. a) The Company may not borrow for the account of any Sub-fund amounts in excess of 10% of the net assets of that Sub-fund, any such borrowings to be from banks and to be effected only on a temporary basis, provided that the Company may acquire foreign currencies by means of back to back loans.
- b) The Company may not grant loans to or act as guarantor on behalf of third parties.
- This restriction shall not prevent the Company from acquiring transferable securities, money market instruments or other financial instruments referred to in I. (1) c), e) and f) which are not fully paid.
- c) The Company may not carry out uncovered sales of transferable securities, money market instruments or other financial instruments.
- d) The Company may only acquire movable or immovable property which is essential for the direct pursuit of its business.
- e) The Company may not acquire either precious metals or certificates representing them. Indirect investment exposure is allowed through permitted investments outlined in this Appendix.
- IX. a) The Company needs not comply with the limits laid down in this chapter when exercising subscription rights attaching to transferable securities or money market instruments which form part of its assets. While ensuring observance of the principle of risk spreading, recently created Sub-funds may derogate from paragraphs III., IV. and VI. a), b) and c) for a period of six months following the date of their creation.
- b) If the limits referred to in paragraph a) are exceeded for reasons beyond the control of the Company or as a result of the exercise of subscription rights, it must adopt as a priority objective for its sales transactions the remedying of that situation, taking due account of the interest of its Shareholders.
- c) To the extent that an issuer is a legal entity with multiple compartments where the assets of the compartment are exclusively reserved to the Investors in such compartment and to those creditors whose

claim has arisen in connection with the creation, operation or liquidation of that compartment, each compartment is to be considered as a separate issuer for the purpose of the application of the risk spreading rules set out in paragraphs III., IV. and VI.

- X. Under the conditions and within the limits laid down by the Law, the Company may, to the widest extent permitted by Luxembourg laws and regulations (i) create any Sub-fund qualifying either as a feeder UCITS (a "Feeder UCITS") or as a master UCITS (a "Master UCITS"), (ii) convert any existing Sub-fund into a Feeder UCITS or Master UCITS, or (iii) change the Master UCITS of any of its Feeder UCITS.

A Feeder UCITS shall invest at least 85% of its assets in the units of another Master UCITS. A Feeder UCITS may hold up to 15% of its assets in one or more of the following:

- ancillary liquid assets in accordance with paragraph II. above;
- financial derivative instruments, which may be used only for hedging purposes.

For the purposes of compliance with the Appendix IV "Financial Derivative Instruments and Techniques and Instruments" below, the Feeder UCITS shall calculate its global exposure relating to financial derivative instruments by combining its own direct exposure under the second indent of the preceding paragraph with either:

- the Master UCITS' actual exposure to financial derivative instruments in proportion to the Feeder UCITS' investment into the Master UCITS; or
- the Master UCITS' potential maximum global exposure to financial derivative instruments provided for in the Master UCITS' management regulations or instruments of incorporation in proportion to the Feeder UCITS' investment into the Master UCITS.

For the avoidance of doubt, please note that such a section derogates from the above investment restrictions.

- XI A Sub-fund (the "Investing Fund") may subscribe, acquire and/or hold securities to be issued by one or more Sub-funds (each, a "Target Fund") without the Company being subject to the requirements of the amended law of 10 August 1915 on commercial companies with respect to the subscription, acquisition and/or the holding by a company of its own shares, under the condition however that:

- a) the Target Fund does not, in turn, invest in the Investing Fund invested in this Target Fund; and
- b) no more than 10% of the assets than the Target Fund whose acquisition is contemplated may, according to its investment policy, be invested in units of UCITS or other UCIs; and
- c) the Investing Fund may not invest more than 20% of its net assets in units of a single Target Fund; and
- d) voting rights, if any, attaching to the Shares of the Target Fund are suspended for as long as they are held by the Investing Fund concerned and without prejudice to the appropriate processing in the accounts and the periodic reports; and
- e) for as long as these securities are held by the Investing Fund, their value will not be taken into consideration for the calculation of the net assets of the Company for the purposes of verifying the minimum threshold of the net assets imposed by the Law; and
- f) to the extent required there is no duplication of management/subscription or redemption fees between those at the level of the Investing Fund having invested in the Target Fund, and this Target Fund.

For the avoidance of doubt, please note that such a section derogates from the above investment restrictions, especially paragraph VI.

#### **Additional investment restrictions for Taiwan:**

For so long as the Company is registered in Taiwan, the Sub-funds offered and sold in Taiwan will be subject to the following restrictions:

- (a) Unless otherwise approved or announced for exemption by the Securities and Futures Bureau of the Financial Supervisory Commission (the "FSC"), the total value of open interest in long positions on derivatives, other than for hedging purposes, held by each Sub-fund may not, at any time, exceed 40% of its net asset value; the total value of open interest in short positions on derivatives held by each Sub-fund may not, at any time, exceed the total market value of the corresponding securities held by the Sub-fund;
- (b) A Sub-fund may not invest in gold, direct commodities or direct real estate;

- (c) A Sub-fund's holdings in stocks listed on exchanges in mainland China or in China related stock (as defined by the FSC) may not, at any time, exceed certain percentage limits as stipulated by the FSC from time to time;
- (d) The total investment in such Sub-fund by domestic Investors in Taiwan may not, at any time, exceed certain percentage limits as stipulated by the FSC from time to time, and
- (e) The securities market of Taiwan may not constitute a major investment region in the portfolio of any Sub-fund. The investment amount of each Sub-fund in the securities market of Taiwan shall be subject to a percentage stipulated by the FSC from time to time.

**Additional investment restrictions for German tax purposes:**

The Sub-funds of the following categories:

- (a) Global Equity Sub-funds (Appendix I Section 1.);
- (b) Regional & Country Equity Sub-funds (Appendix I Section 2.); and
- (c) Theme Equity Sub-funds (Appendix I Section 3.) (except for the Sub-fund Robeco Sustainable Property Equities),

intend to qualify for German tax purposes as a so-called "Equity Funds" in terms of sec. 2(6) of the GInvTA as applicable from 1 January 2018 onwards.

"Equity Funds" are defined as funds, which according to their investment conditions invest continuously more than 50% of their gross assets (defined as the value of the assets without considering liabilities) in "Equity Participations" within the meaning of sec. 2(8) GInvTA.

To this end, the aforementioned Sub-funds will invest continuously more than 50% of their gross assets in Equity Participations within the meaning of sec. 2(8) GInvTA.

Corporate actions, subscriptions/redemptions and market movements may temporarily cause a Sub-fund not to meet this Equity Participation-ratio. In such a case, the Sub-fund will take possible and reasonable measures to re-establish the indicated investment level without undue delay after getting knowledge of the shortfall.

"Equity Participations" within the meaning of sec. 2(8) of the GInvTA are defined as:

- shares in a corporation, which are admitted to official trading at an exchange or an organized market recognized by the German Federal Financial Supervisory Authority (*Bundesanstalt für Finanzdienstleistungsaufsicht*);
- shares in a corporation, which does not qualify as a "real estate company" for German purposes and which either (i) is resident in an EU member state or an EEA member state and is subject to corporate income tax in that state without being exempted from such tax or (ii) is resident in a third country and is subject to a corporate income tax in that state at a rate of at least 15% without being exempted from such tax;
- fund units in an Equity Fund with 51% of the Equity Fund units' value or, if the investment conditions of the Equity Fund provide for a higher minimum Equity Participation-ratio, with the respective higher percentage of the Equity Fund units' value;
- fund units in a so-called "Mixed Fund" (i.e. a fund, which according to its investment conditions invests continuously at least 25% of its gross assets in Equity Participations within the meaning of sec. 2(8) GInvTA) with 25% of the Mixed Fund units' value or, if the investment conditions of the Mixed Fund provide for a higher minimum Equity Participation-ratio, with the respective higher percentage of the Mixed Fund units' value.

In accordance with sec. 2 (6) sentences 2 and 3 and sec. 2(7) sentences 2 and 3 of the GInvTA, for purposes of calculating their own Equity Participation-ratios, the Sub-funds will also consider the actual Equity Participation-ratios of target funds published on each Valuation Day, provided that a valuation takes place at least once per week.

Pursuant to sec. 2(8) sentence 5 GInvTA the following participations do not qualify as Equity Participations:

- shares in partnerships, even if the partnerships are holding themselves shares in corporations;
- shares in corporations, which pursuant to sec. 2(9) sentence 6 of the GInvTA qualify as real estate;
- shares in corporations which are exempt from income taxation, to the extent these corporations are distributing their profits, unless the distributions are subject to a taxation of at least 15% and the investment fund is not exempt from this taxation;
- shares in corporations;
- whose income is directly or indirectly to more than 10% derived from shares in corporations that do not fulfil the requirements of sec. 2(8) sentence no. 2 lit. a) or b) of the GInvTA; or
- whose market value consists to more than 10% of directly or indirectly held shares in corporations that do not fulfil the requirements of sec. 2(8) sentence 1 no. 2 lit. a) or b) of the GInvTA.

**Additional investment restrictions for Hong Kong:**

For so long as the Company is registered in Hong Kong, the Sub-funds offered and sold in Hong Kong may be subject to additional investment restrictions specifically imposed by the Hong Kong regulator. An overview of Sub-funds registered and such additional restrictions are shown in the Hong Kong Covering Document, which can be accessed via <https://www.robeco.com/docm/pros-cgf-individual-hk-en.pdf>.

## APPENDIX III – RISK MANAGEMENT PROCESS

The Management Company, on behalf of the Company, employs a risk-management process which enables it to monitor and measure the financial risk of the positions and their contribution to the overall risk profile of each Sub-fund. The Management Company, on behalf of the Company employs, if applicable, a process for accurate and independent assessment of the value of any OTC derivative instruments.

An independent risk management team is responsible for the implementation of financial risk management controls on behalf of the Management Company. From a financial risk management perspective, four main risk classifications are discerned, market risk, counterparty risk, liquidity risk and sustainability risk. These are treated separately in this appendix.

### ***Counterparty risk***

With respect to counterparty risk, procedures are in place with regard to the selection of counterparties, focusing on external credit ratings and market implied default probabilities (credit spreads). Counterparty exposure and concentration limits are computed and monitored on a frequent basis. In addition, counterparty risk is mitigated by securing appropriate collateral.

For counterparties to OTC derivative transactions to be accepted they are assessed on their creditworthiness based on external resources quoting the short-and long term rating and on credit spread as well as guarantees issued by the parent company of such counterparties, if any. The minimum acceptance level for such counterparties to be accepted is that it must have a long term mid rating higher or equal to A3 and a short term mid rating equal to P-1, except for specific cases or circumstances. In addition to the external ratings, soft indicators are also examined when evaluating a new counterparty. While there are no predetermined legal status or geographical criteria applied in the selection of the counterparties, these elements are typically taken into account in the selection process.

The creditworthiness of the derivative counterparty will determine whether derivatives may be entered into with the respective counterparty. The Company will only enter into new financial derivatives transactions with counterparties specialized in this type of transaction and adhering to the acceptance criteria as set out above. In addition, the use of financial derivatives must comply with the investment objective and policy and risk profile of the Company. These internal guidelines are determined in the best interest of the client by the Company and are subject to change without prior notice.

Counterparties to securities lending transactions/repurchase agreements are assessed on their creditworthiness (based on external resources), credit spread, prudential status, as well as the availability of a guarantee provided by its parent company or the Lending Agent. These internal guidelines are determined in the best interest of the client by the Company and are subject to change without prior notice.

Whenever the delivery of an asset is due by a Sub-fund to a counterparty stemming from a financial derivative instrument, the Sub-fund must be able either to deliver the asset immediately or be able to acquire the asset in time for delivery. Whenever a payment is due by a Sub-fund to a counterparty stemming from a financial derivative instrument, the Sub-fund must either hold cash or have sufficient liquidity in order to meet such obligations. A coverage policy is in place to ensure that the assets in a Sub-fund are sufficiently liquid to enable the Sub-fund to fulfil its payment obligations.

### ***Liquidity risk***

The Management Company employs a liquidity risk framework that reflects the dynamic that exists between asset liquidity risk and funding liquidity risk.

Asset liquidity risk arises when transactions cannot be executed in a timely fashion at quoted market prices and/or at acceptable transaction cost levels due to the size of the trade. Or in more extreme cases, when they cannot be conducted at all. Asset liquidity risk is a function of transaction size, transaction time and transaction cost. For each Sub-fund asset liquidity risk is evaluated by calculating how much of the portfolio can be sold within a certain timeframe against acceptable transaction costs.

Funding liquidity risk occurs when the redemption requirements of clients or other liabilities cannot be met without significantly impacting the value of the portfolio. Funding liquidity risk will only arise if there is also asset liquidity risk. Funding liquidity risk is estimated by applying several redemption scenarios, and taking into account funding obligations that arise due to collateral or margin requirements from derivative positions.

Both asset and funding liquidity risks are estimated in normal and in stressed conditions. In compliance with ESMA Guidelines on liquidity stress testing in UCITS and AIFs (Final Guidelines published on 16/07/2020; ESMA34-39-897 EN) and CSSF Circular 19/733 regarding the IOSCO recommendations on liquidity risk management for open-ended UCIs, the liquidity risk

management framework incorporates liquidity stress testing, which is conducted on a regular basis. The liquidity stress testing is applied separately on asset and on funding side. The results are combined in order to determine the overall effect on a Sub-fund's liquidity.

Liquidity coverage ratio is used to measure the ability of a Sub-fund's assets to meet funding obligations. Sub-funds with liquidity coverage ratios below defined thresholds are discussed in relevant risk committees and, if deemed necessary, appropriate measures are taken.

The liquidity risk management framework is applicable at all stages of a Sub-fund's lifecycle.

### ***Sustainability risk***

The Management Company systematically incorporates sustainability factors, to the extent these present a material risk to a Sub-fund, into its investment and portfolio construction processes, alongside traditional financial risk factors. This is done through ESG scoring methodologies using proprietary sustainability research and external resources which are built into the portfolio construction process.

Processes and controls for sustainability risk integration are embedded in a designated Sustainability Risk Policy which is maintained by the risk management function and governed by the Risk Management Committee (RMC). The Sustainability Risk Policy is built on three pillars. The environmental or social characteristics promoted by a Sub-fund or sustainable investment objective of a Sub-fund is used to identify and assess the relevant material sustainability risk topics. Based on these characteristics or investment objectives sustainability risk is monitored. Sensitivity and scenario analyses are conducted on a frequent basis to assess any material impact climate change risk may have on the portfolio of a Sub-fund.

### ***Assessment of the likely impact of sustainability risks on returns***

The financial position of investments in the portfolios managed by the Management Company may deteriorate due to material sustainability related risks, depending on the investment universe.

The financial position of the securities owned by a Sub-fund in the portfolios managed by the Management Company may deteriorate due to geological or environmental risks these companies are exposed to, which in turn may impact the market value of these investments referred to as physical climate risk. Furthermore the financial position of investments in the portfolio's managed by the Management Company may deteriorate due to increasing government regulation or a shift in consumer behavior that in turn may impact the market value of these investments referred to as climate transition risk.

Failing to mitigate against the consequences of climate change could potentially have a negative impact on the underlying assets of a Sub-fund. A Sub-fund may also experience liquidity risk after a natural disaster in a relevant market, potentially resulting in redemptions.

A climate risk scenario analysis for the Sub-fund is performed as a quantitative assessment of the potential impact of climate transition scenarios. In addition sustainable investment objectives of a Sub-fund, i.e. carbon reduction, may reduce the impact on the market value of the portfolio and is less impacted by any climate transition or physical risks in general and/or market risk stemming from issuers with insufficient environmental management.

### ***Market risk***

Risk controls are designed to limit the Sub-funds' market risk. The internal risk management methodology applied by the Management Company focuses on the tracking error, relative volatility versus the benchmark, and absolute volatility. Where appropriate, the extent to which the Sub-funds are exposed to market risk is restricted by means of limits on these risk measures. Derivative positions are included in the market risk calculations, by taking into account the economic exposures of each instrument to its underlying value(s). The use of market risk limits implicitly caps the economic exposure introduced by derivatives that can be part of the portfolio. In circumstances where the market risk of a Sub-fund is measured relative to an appropriate benchmark, where possible, the Sub-fund uses a widely accepted index as benchmark. On top of the above mentioned risk measures, results of stress scenarios are analyzed and monitored. Both the absolute and relative (to the benchmark) stress test results are measured and monitored. In addition, concentration limits (e.g. on countries or sectors) vis-a-vis the benchmark may apply.

Next to the internal market risk measures, the table "Global exposure method and leverage" below presents an overview for the different Sub-funds of the method used to calculate global exposure (i.e. commitment approach, relative VaR or absolute VaR).

For Sub-funds using the commitment approach to calculate global exposure, the positions in financial derivative instruments are converted into equivalent positions of the underlying assets. The total commitment is quantified as the sum of the absolute values of the individual commitments, after consideration of the possible effects of netting and hedging. For Sub-funds using the commitment approach to calculate global exposure, the global exposure of the Sub-fund may reach 210% of its net assets, the possibility to effect borrowings up to 10% of the net assets of the Sub-fund included.

For Sub-funds using the VaR approach, the expected and maximum expected levels of leverage are calculated by using sum of notional approach. The level of leverage using the sum of notional approach is expressed as a ratio between the aggregate of the notional values of all FDI entered into by the Sub-fund (including FDI that are used for investment purposes and/or for hedging purposes) and its NAV.

### Global exposure method and leverage

| Sub-funds Name                                                  | Method used to calculate the global exposure | Expected level of leverage | Leverage is not expected to exceed |
|-----------------------------------------------------------------|----------------------------------------------|----------------------------|------------------------------------|
| <b>Global Equity Sub-funds</b>                                  |                                              |                            |                                    |

## APPENDIX IV – FINANCIAL DERIVATIVE INSTRUMENTS, EFFICIENT PORTFOLIO MANAGEMENT TECHNIQUES AND INSTRUMENTS

The Company can employ (i) financial derivatives on eligible assets and (ii) techniques and instruments relating to transferable securities and money market instruments under the conditions and within the limits laid down by the Law and the regulations of the supervisory authority. The Company will employ derivatives for efficient portfolio management, for hedging purposes and for investment purposes.

The conditions of use and the limits applicable shall in all circumstances comply with the provisions laid down in the Law.

Under no circumstances shall these operations cause the Company and its Sub-funds to diverge from its investment policies and restrictions.

Techniques and Instruments (including but not limited to securities lending and (reverse) repurchase agreements) relating to transferable securities and money market instruments can be used by each Sub-fund for the purpose of efficient portfolio management as further described hereafter.

Unless otherwise provided in sub-section "Levels securities lending, (reverse) repurchase agreements and Equity Swaps (including TRS and CFD)", a Sub-fund can make use of reverse repurchase transactions, securities lending and Equity Swaps (including TRS and CFD) on a continuous basis.

Securities lending is used to improve the performance either through the fee paid by the borrower for the use of the securities or the reinvestment of the cash collateral. The maximum level of securities lending for a Sub-fund is set at 75%, this level is only expected to be reached in exceptional market circumstances. As indicated below, the Sub-fund Robeco QI Emerging Markets Enhanced Index Equities is excluded from engaging in securities lending transactions.

Reverse repurchase agreements are used to collateralise cash positions and mitigate counterparty exposure as indicated below.

For the avoidance of doubt, even if the expected exposure to securities lending or reverse repurchase transactions can vary between Sub-funds, the objectives of the use of such transactions remain the same for all relevant Sub-funds. The proportion of a Sub-fund's net assets subject to securities lending and reverse repurchase transactions will be dependent on factors such as, but not limited to, the Sub-fund's total net assets, the demand from the underlying market and seasonal trends in the underlying market. During periods of little or no demand from the market, the proportion of a Sub-fund's net assets subject to securities lending and/or reverse repurchase transactions can be lower, while there may also be periods of higher demand, in which case the proportion will be higher.

Repurchase agreements can be used in exceptional circumstances to obtain liquidity at a low rate of interest to meet sudden redemptions. Buy-sell back transactions, sell-buy back transactions and margin lending transactions will not be used.

### **SECURITIES LENDING, (REVERSE) REPURCHASE AGREEMENTS AND EQUITY SWAPS (including TRS and CFD)**

To the maximum extent allowed by, and within the limits set forth in the laws and regulations applicable to the Company, in particular the provisions of (i) Article 11 of the Grand Ducal regulation of 8 February 2008 relating to certain definitions of the Law, of (ii) CSSF Circular 08/356 relating to the rules applicable to undertakings for collective investments when they use certain techniques and instruments relating to transferable securities and money market instruments and of (iii) CSSF Circular 14/592 relating to ESMA Guidelines 2014/937 on ETFs and other UCITS issues (as these pieces of regulations may be amended or replaced from time to time).

The income of securities lending transactions will be for the benefit of the Sub-fund except for a fee applied by the Lending Agent (i.e. the percentage of the income of the securities lending transactions that is retained by the Lending Agent), based on the securities lending returns. This fee amounts to (A) 25% of the income from these securities lending transactions for any Loans which generate a return of 0.5% (i.e. the relevant Sub-fund retains 75% of the gross revenues generated from securities lending activities) or less and (B) 10% of the income from these securities lending transactions for any Loans which generate a return greater than 0.5% (i.e. the relevant Sub-fund retains 90% of the gross revenues). All operational costs/fees of running the programme are paid from the Lending Agent's fee. This includes all direct and indirect costs/fees generated by the securities lending activities. The Lending Agent receives its fee for providing its operational support, its expertise and risk management in relation to the securities lending activities as well as collateral management activities in relation to securities lending.

If cash collateral is received, the Lending Agent will conduct reverse repurchase transactions in order to mitigate counterparty exposures, the result generated by these transactions will be for the benefit/cost of the Sub-fund except for a fee applied by the Lending Agent (i.e. the percentage of the income of the reverse repurchase transactions that is retained by the Lending Agent), based on the returns. This fee amounts to (A) 25% of the income from these transactions if the return is 0.5% (i.e. the relevant Sub-fund retains 75% of the gross revenues generated from reverse repurchase transactions) or less and (B) 10% of the income from these transactions if the return is greater than 0.5% (i.e. the relevant Sub-fund retains 90% of the gross revenues).

The Management Company may invest into Equity Swaps (including TRS and CFD). The net revenues from Equity Swaps (including TRS and CFD) will be solely for the account of the relevant Sub-fund as there are no fees paid to a counterparty or an intermediary. The costs attributed to Equity Swaps (including TRS and CFD) held are included in the spread.

The Management Company conducts repurchase/reverse repurchase transactions with respect to cash positions of the relevant Sub-fund on behalf of the Company. The Management Company may appoint a third party, that may be related to the Depositary, to conduct these transactions. The net revenues from repurchase/reverse repurchase transactions will be solely for the account of the relevant Sub-fund, net of reasonable operational costs and fees. The annual report of the Company shall contain details of the revenues arising from the repurchase/reverse repurchase, together with the direct and indirect operational costs and fees incurred.

Counterparties to securities lending transactions/repurchase agreements/Equity Swaps (including TRS and CFD) are assessed as described in [APPENDIX III – RISK MANAGEMENT PROCESS](#).

The maximum and expected level of leverage in respect of securities lending transactions/repurchase agreements/Equity Swaps (including TRS and CFD) is mentioned in the table below. The securities lending transactions/repurchase agreements must not affect the management of the Company in accordance with their investment policy.

The collateral can be enforced if there is an event of default under the relevant agreement. The collateral can be subject to the right of set-off if the relevant agreement stipulates so.

#### Specific risks linked to securities lending and (reverse) repurchase agreements

Use of the aforesaid techniques and instruments involves certain risks, some of which are listed in the following paragraphs (in addition to the general information provided under Section 4 of the Prospectus), and there can be no assurance that the objective sought to be obtained from such use will be achieved.

The use of securities lending transactions and/or (reverse) repurchase agreements could, in the event of default (and specifically an event of default of a counterparty) have a negative impact on the performance of the Sub-fund. The risk management process implemented by the Management Company (as described in [APPENDIX III – RISK MANAGEMENT PROCESS](#)) aims at mitigating such a risk.

## FINANCIAL DERIVATIVE INSTRUMENTS

To the maximum extent allowed by, and within the limits set forth in the laws and regulations applicable to the Company, in particular the provisions of (i) Article 11 of the Grand Ducal regulation of 8 February 2008 relating to certain definitions of the Law, of (ii) CSSF Circular 08/356 relating to the rules applicable to undertakings for collective investments when they use certain techniques and instruments relating to transferable securities and money market instruments and of (iii) CSSF Circular 14/592 relating to ESMA Guidelines on ETFs and other UCITS issues (as these pieces of regulations may be amended or replaced from time to time), the Company can for the purpose of generating additional capital or income or for reducing costs or risks enter, into financial derivative transactions, as further indicated in [APPENDIX I – INFORMATION PER SUB-FUND](#).

The derivative transactions and the collateral exchanged pursuant to those transactions are in principle governed by the ISDA Master Agreements (or an equivalent document) and the Credit Support Annex (or an equivalent document) respectively. The International Swaps and Derivatives Association ("ISDA") has produced this standardized documentation for these transactions.

Counterparties of the derivative transactions are assessed as described in [APPENDIX III – RISK MANAGEMENT PROCESS](#).

Should the Company invest in financial derivative instruments related to an index for investment purposes, information on the index and its rebalancing frequency would be disclosed in [APPENDIX I – INFORMATION PER SUB-FUND](#) prior thereto, by way of reference to the website of the index sponsor as appropriate.

Should a Sub-fund invest in financial derivative instruments which underlying is a financial index, it is expected that the rebalancing frequency of the index should not require a rebalancing of the portfolio of the Sub-fund considering its investment policy and should not either generate additional costs for the Sub-fund.

The Management Company transacts the financial derivative transactions on behalf of the Company. The result generated from the derivatives transactions (positive or negative) is solely for the account of the Company and is further specified in the Company's audited reports.

Please note that if any counterparty to a financial derivative transaction has discretion as indicated under point 38 d) of the ESMA Guidelines on ETFs and other UCITS issues (ESMA/2014/937 EN), the counterparty will have to be approved by the CSSF as portfolio manager in respect of the relevant Sub-fund.

## Conflict of interest

Pursuant to the Management Company Services Agreement between the Company and the Management Company and, as the case may be, the Portfolio Management Agreements between the Management Company and the Portfolio Managers (if any),

the Management Company and the Portfolio Managers (if any) undertake to disclose all and any conflicts of interest that may arise regarding the provision of its services in writing to the Company. Notwithstanding this, the Management Company and the Portfolio Managers (if any) shall be at liberty to act as management company to any other person or persons it might think fit and nothing herein contained shall prevent the Management Company or the Portfolio Manager (if any) from contracting or entering into any financial, banking, commercial, advisory or other transactions (including without limitation financial derivative transactions) whether on its own account or on the account of others as allowable by law and regulation.

More specifically in relation to the use of financial derivatives such as but not limited to swaps (including but not limited to Equity Swaps, credit default swaps, interest rate swaps and index swaps), futures and options, the Management Company undertakes to disclose all and any conflicts of interest that may arise regarding these transactions, in writing to the Company.

With respect to securities lending transactions and (reverse) repurchase agreements, the Lending Agent maintains a conflicts of interest policy for identifying, preventing and managing conflicts of interest between the lender and the agent or any person directly or indirectly linked to the Lending Agent or between the Lending Agent and another client of the Lending Agent. Up-to-date information on the conflicts of interest policy can be obtained via the following website link: <http://www.jporganchase.com/>.

It is not intended to lend the securities to an affiliated entity of the Company.

### **Credit Default Swaps**

Credit default swaps can be used to buy protection under credit default swaps or sell protection under credit default swaps in order to acquire a specific credit exposure. A credit default swap is a bilateral financial contract in which one counterpart (the protection buyer) pays a periodic fee in return for a contingent payment by the protection seller following a credit event of a reference issuer. The protection buyer must either sell particular obligations issued by the reference issuer at their par value (or some other designated reference or strike price) when a credit event occurs or receive a cash settlement based on the difference between the market price and such reference or strike price. The credit default swaps to be entered into will be marked to market daily on this basis. A credit event is commonly defined as bankruptcy, insolvency, receivership, material adverse restructuring of debt, or failure to meet payment obligations when due.

CDS basket swaps (such as iTraxx and iBOXX families of CDS basket swaps) are basket swaps that reference a range of securities or derivative instruments. The Sub-fund can invest in CDS basket swaps and CDS as protection buyer and seller. The main advantages of CDS basket swaps are instant exposure to a very diversified basket of credits with low bid and offer costs and use for example as credit hedge for an existing single name credit default swap or cash bond.

### **Interest rate Swaps**

The Company can make use of interest rate swaps. An interest rate swap is an agreement between two counterparties whereby one stream of future interest payments is exchanged for another based on a specified principal amount. Interest rate swaps often exchange a fixed payment for a floating payment that is linked to an interest rate. A counterparty will typically use interest rate swaps to limit or manage exposure to fluctuations in interest rates, or to obtain a marginally lower interest rate than it would have been able to get without the swap. The interest rate swaps to be entered into will be marked to market daily on this basis.

### **Equity Swaps (including TRS and CFD)**

The Company can make use of Equity Swaps (including TRS and CFD). Equity Swaps are used for implementing components of the investment strategy to enhance returns that can only be achieved through derivatives such as gaining short exposure to companies. Equity Swaps may also be used to manage the portfolio efficiently such as gaining cost efficient long exposure. Any Sub-fund engaging in short positions through derivatives must always hold sufficient liquid assets to cover its obligations arising from these positions. Sub-funds may be required to place initial and/or variation margin with its counterparty. As a result it may need to hold a proportion of its assets in cash or other liquid assets to satisfy any applicable margin requirements for the Sub-fund. This may have a positive or negative impact on the performance of the Sub-fund.

### **Futures, Options and Forwards**

The Company may use options, futures and forward contracts on currencies, securities, indices, inflation and interest rates.

*Futures:* Transactions in futures may carry a high degree of risk. The amount of the initial margin is small relative to the value of the futures contract so that transactions are "leveraged". A relatively small market movement will have a proportionately larger impact which may work for or against the Company. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.

*Options:* Transactions in options may also carry a high degree of risk. Selling ("writing" or "granting") an option generally entails considerably greater risk than purchasing options. Although the premium received by the option seller is fixed, the seller may suffer a loss well in excess of that amount as the value of the underlying exceeds the exercise price of the option. Losses would continue to accumulate as the underlying would continue to increase. As the increase of the underlying is not capped, the Company could theoretically be exposed to indefinite losses.

The seller will also be exposed to the risk of the purchaser exercising the option and the seller will be obliged either to settle the option in cash or to acquire or deliver the underlying investment. If the option is "covered" by the seller holding a corresponding position in the underlying investment or a future on another option, the risk may be reduced.

#### **Details on the use of certain derivatives**

Exchange traded and over-the-counter derivatives used, include but are not limited to futures, options, swaps (including but not limited to Equity Swaps, interest rate swaps, credit default swaps ("CDS"), index swaps and CDS basket swaps).

TBA instruments are contracts on an underlying mortgage backed security ("MBS") to buy or sell a MBS which will be delivered at an agreed-upon date in the future. In a TBA trade, the buyer and seller decide on general trade parameters, such as agency, coupon, settlement date, par amount, and price, but the buyer typically does not know which pools actually will be delivered until two days before settlement.

#### **Specific risks linked to financial derivatives instruments**

Use of financial derivatives involves certain risks, some of which are listed in the following paragraph (in addition to the information generally contained in Section 4 of this Prospectus), and there can be no assurance that the objective sought to be obtained from such use will be achieved.

In general, financial derivative transactions can be entered into to increase the overall performance of the relevant Sub-fund of the Company, but an event of default (and specifically an event of default of a counterparty) could have a negative impact on the performance of the relevant Sub-fund. The risk management process implemented by the Management Company (as described above) aims at mitigating such risk.

#### **COLLATERAL MANAGEMENT FOR SECURITIES LENDING, REPURCHASE AGREEMENTS AND FINANCIAL DERIVATIVE TRANSACTIONS**

The collateral received by a Sub-fund shall comply with applicable regulatory standards regarding especially liquidity, valuation, issuer credit quality, correlation and diversification.

The criterion of sufficient diversification with respect to issuer concentration is considered to be respected if the Sub-fund receives from a counterparty of efficient portfolio management and over-the-counter financial derivative transactions a basket of collateral with a maximum exposure to a given issuer of 20% of its Net Asset Value. When a Sub-fund is exposed to different counterparties, the different baskets of collateral shall be aggregated to calculate the 20% limit of exposure to a single issuer. To the extent permitted by the applicable regulation and by way of derogation the Sub-fund can be fully collateralized in different transferable securities and money market instruments issued or guaranteed by a Member State, one or more of its local authorities, OECD countries, or a public international body to which one or more Member States belong. In that case the Sub-fund shall receive securities from at least six different issues, but securities from any single issue shall not account for more than 30% of the Net Asset Value of the Sub-fund.

Non cash collateral received by a Sub-fund in respect of any of these transactions will not be sold, reinvested or pledged.

As the case may be, cash collateral received by a Sub-fund in relation to any of these transactions can be reinvested in a manner consistent with the investment objectives of the Sub-fund in (a) shares or units issued by short-term money market undertakings for collective investment as defined in the CESR Guidelines on a Common Definition of European Money Market Funds (Re – CESR/10-049) calculating a daily net asset value and being assigned a rating of AAA or its equivalent, (b) short-term bank deposits with a credit institution which has its registered office in a Member State or, if the registered office is located in a third country, provided that it is subject to prudential rules considered by Luxembourg regulator as equivalent to those laid down in community law, (c) highly rated bonds issued or guaranteed by a Member State, Switzerland, Canada, Japan or the United States or by their local authorities or by supranational institutions and undertakings with EU, regional or world-wide scope and (d) reverse repurchase agreement transactions provided the transactions are with credit institutions subject to prudential supervision and the Company can recall at any time the full amount of cash on an accrued basis. Such reinvestment will be taken into account for the calculation of the Company's global exposure, in particular if it creates a leverage effect.

To mitigate counterparty exposures, cash received from securities lending will be collateralised via short term reverse repurchase transactions.

The collateral received in connection with such transactions must meet the criteria set out in the CSSF Circular 08/356 which includes the following collateral:

- (i) bonds issued or guaranteed by a Member State, an OECD member state, by their local authorities or by supranational bodies and organizations with community, regional or world-wide character;
- (ii) investment grade corporate bonds issued by issuers located in a Member State or an OECD member state;
- (iii) shares or units issued by money market UCIs calculating a daily net asset value and being assigned a rating of AAA or its equivalent;
- (iv) shares or units issued by UCITS investing mainly in bonds/shares mentioned in (v) and (vi) below;
- (v) main index equity securities quoted on a stock exchange in a Member State, an OECD member state, Hong Kong or Singapore;
- (vi) shares admitted to or dealt in on a Regulated Market of a Member State or on a stock exchange of a member state of the OECD, on the condition that these shares are included in a main index;
- (vii) cash; or
- (viii) the collateral will not consist of securities issued by the borrower or any of its legal entities. The collateral will not be highly correlated to the counterparty's performance.

In respect of securities lending transactions and reverse repurchase agreements, the standard approach in respect of any Sub-fund is that collateral is received by a tri-party agent, whereas in specific cases (e.g. specific government bonds) the collateral can also be received bilaterally. In case of such a bilateral receipt, which is predominantly applicable to repurchase agreements, the collateral is administrated, monitored and valued by the Lending Agent and/or the Administration Agent.

The collateral received in case of a bilateral receipt is kept per Sub-fund on a segregated account at the Depositary (or sub-custodian on behalf of the Depositary). Collateral will be received by way of title transfer in the tri-party account and will be held by the Depositary (or sub-custodian on the behalf of the Depositary) on behalf of the relevant Sub-fund in accordance with applicable laws and the Depositary's safekeeping duties under the Depositary Agreement. It is valued by a tri-party agent, which acts as an intermediary between the two parties to the securities lending transactions. In this case the tri-party agent is responsible for the administration of the collateral, marking to market, and substitution of collateral. Securities lending positions and collateral are marked-to-market on a daily basis, in a similar manner and frequency as the assets of the Company, and are monitored by the Lending Agent.

Collateral margins (or "haircut") are dependent on the asset type of the out-on-loan securities (or cash) and collateral received (equities, bonds or cash), on the type of issuers (governments or companies), currency mismatches as well as on the correlation between the out-on-loan securities and the collateral received. Under normal circumstances, the collateral received as security for securities lending transactions typically ranges between 102% and 110% of the market value of the securities lent. The margin can be changed without notice to reflect current market conditions. The adequacy of the collateral received vis-à-vis the collateral margins, as well as the adequacy of the collateral margins, is assessed on a daily basis by the Lending Agent and the tri party collateral manager. No other re-evaluation of the collateral takes place.

| Eligible Collateral                            | Collateral Margin |
|------------------------------------------------|-------------------|
| <b>Cash</b>                                    | 100%*             |
| <b>Government bonds and T-Bills</b>            | ≥ 102%            |
| <b>Supranational bonds and municipal bonds</b> | ≥ 102%            |
| <b>Other bonds</b>                             | ≥ 102%            |
| <b>Equities</b>                                | ≥ 102%            |

\* Exposures that result for financial derivative transactions are predominantly collateralised by cash. Due to MTA's (Minimal Transfer Amounts) the actual collateralisation percentage can be lower.

The Sub-funds can also accept cash when received as collateral in securities lending transactions. Cash collateral received from securities lending is subject to a margin grid that reflects the haircut. Cash provided as collateral can be reinvested.

The collateral received as security for (reverse) repurchase agreement transactions will be at least 90% of the value of the outstanding (or incoming) money under the relevant (reverse) repurchase agreement.

In respect of financial derivative transactions, the Management Company is responsible for the administration of the transactions and the collateral, marking to market, and substitution of collateral. The transactions and collateral are marked-to-market on a daily basis.

## APPENDIX V – PERFORMANCE FEE

### Methodology:

A Performance Fee for the relevant Class of Shares of the Sub-fund is only due at the end of the Financial Year when the relevant Class of Shares of the Sub-fund outperforms the relevant Index or Hurdle Rate as indicated in Appendix I (i.e. yearly crystallisation frequency). **Note that an outperformance of the relevant Class of Shares of the Sub-fund does not imply a positive return of the relevant Class of Shares of the Sub-fund, a performance fee is also due when the relevant Class of Shares of the Sub-fund has a negative return but an outperformance over the relevant Index or Hurdle Rate as indicated in Appendix I.**

This outperformance over the relevant Index or Hurdle Rate must have taken place since inception of the relevant Class of Share of the Sub-fund or since the time that a Performance Fee was due. In the event that payment of the Performance Fee is due ("Pay-out"), the basis for the Performance Fee calculation for the next Financial Year will be reinitiated. A performance fee should only be payable in circumstances where a positive performance has been accrued during the performance reference period. In the event of no Pay-out, the basis for the Performance Fee calculation will not be reinitiated and any underperformance will be brought forward for the purpose of the calculation of the Performance Fee of the next Financial Year. Any underperformance previously incurred during the performance reference period should be recovered before a performance fee becomes payable. To this purpose, the length of the performance reference period is equal to the whole life of the relevant Sub-fund. The performance reference period is to be understood as the time horizon over which the performance is measured and compared with that of the reference indicator, at the end of which the mechanism for the compensation for past underperformance (or negative performance) can be reset.

In addition if a Shareholder redeems or switches all or part of their Shares before the end of a performance period, any accrued performance fee with respect to such Shares will crystallize on that Valuation Day and will then become payable to the Management Company. The basis for the Performance Fee calculation will not be reinitiated on those Valuation Days at which performance fees crystallize following the redemption or switch of Shares.

### Examples <sup>2</sup>

|                                                                                      | Year 1                | Year 2                    | Year 3                    |
|--------------------------------------------------------------------------------------|-----------------------|---------------------------|---------------------------|
| NAV start of the relevant Class of Shares of the Sub-fund                            | 100                   | 98                        | 108                       |
| NAV end of the relevant Class of Shares of the Sub-fund                              | 98                    | 108                       | 104                       |
| Return of the Relevant Class of Shares of the Sub-fund                               | -2%                   | 10%                       | -4%                       |
| Index/Hurdle Rate start                                                              | 100                   | 105                       | 107                       |
| Index/Hurdle Rate end                                                                | 105                   | 107                       | 101                       |
| Index/Hurdle Rate return                                                             | 5%                    | 2%                        | -6%                       |
| Performance (Share Class return -/- Index /Hurdle Rate return) in the Financial Year | -7%                   | 8%                        | 2%                        |
| Out- or underperformance since inception or since last Pay-out                       | -7%                   | 1% (=8% - 7%)             | 2%                        |
| Performance Fee due                                                                  | NO                    | Yes, (max 1% * "Portion") | Yes, (max 2% * "Portion") |
| Basis for the Performance Fee calculation next year                                  | Calculation continued | Reinitiated               | Reinitiated               |

- Year 1: Share of the relevant Class of the Sub-fund did not outperform the Index/Hurdle rate and the underperformance will be brought forward for the purpose of the calculation of the Performance Fee of Year 2.
- Year 2: Share of the relevant Class of the Sub-fund did outperform the Index/Hurdle Rate. The Performance Fee is corrected for the underperformance in Year 1. As a Performance Fee is due, the basis for the Performance Fee calculation for the next Financial Year will be reinitiated.
- Year 3: Share of the relevant Class of the Sub-fund has a negative return but outperformed the Index/Hurdle Rate since the last Pay-out. As a Performance Fee is due, the basis for the Performance Fee calculation for the next Financial Year will be reinitiated.

<sup>2</sup> The figures in the table are rounded to 0 decimals.

## Detailed description of Calculation method

### Daily process

Each Valuation Day the difference between the percentual change in the NAV per Share of the relevant Class of Shares of the Sub-fund on the first Valuation Day since inception (or since the last Pay-out) and the Valuation Day Year and the percentual change in the simple daily equivalent of the relevant Index or Hurdle Rate, as defined in Appendix I over the corresponding period is calculated. In case this difference is negative (underperformance of the relevant Class of Shares of the Sub-fund), the accrual in the Net Asset Value per Share of the relevant Class of Shares of the Sub-fund will be 0. In case the difference is positive (outperformance of the relevant Class of Shares of the Sub-fund), the daily Performance fee will be calculated.

The daily Performance Fee will be calculated as follows. Each Valuation Day the difference is calculated between the percentual change in the Net Asset Value (NAV) per Share of the relevant Class of the Sub-fund of the Valuation Day compared to the previous Valuation Day and the percentual change in the simple daily equivalent of the relevant Index or Hurdle Rate as defined in **APPENDIX I – INFORMATION PER SUB-FUND** of the Valuation Day compared to the previous Valuation day. The outcome hereof is multiplied by the NAV<sup>IA</sup> of the relevant Class of Shares of the Sub-fund and by the relevant Portion as defined in Appendix I.

$$\begin{aligned} \text{daily Performance Fee} = & \Delta \quad (\text{NAV per Share Valuation Day/NAV per Share previous Valuation Day}) \\ & -/- \quad \Delta \quad (\text{Index/Hurdle Rate Valuation Day/Index/Hurdle Rate previous Valuation Day}) \\ & \times \quad \text{NAV of the relevant Class of the Sub-fund} \\ & \times \quad \text{Portion} \end{aligned}$$

The calculated daily Performance Fee will be included in the cumulative Performance Fee since inception (or since the last Pay-out). In the event that the calculated daily Performance Fee is negative, it will reduce the cumulative Performance Fee. The cumulative Performance Fee will be deducted from the Net Asset Value per Share of the relevant Class of Shares of the Sub-fund, provided that the cumulative Performance Fee is positive. In the event that the cumulative Performance Fee is negative, the accrual in the Net Asset Value per Share of the relevant Class of Shares of the Sub-fund will be 0.

In addition if a Shareholder redeems or switches all or part of their Shares before the end of a performance period, any accrued performance fee with respect to such Shares will crystallize on that Valuation Day and will then become payable to the Management Company. The basis for the Performance Fee calculation will not be set to 0 on those Valuation Days at which performance fees crystallize following the redemption or switch of Shares.

### Annual Process

At the end of the Financial Year it will be calculated whether the criteria ("**Criteria Annual Process**") are met, by taking the difference between the percentual change in the NAV per Share of the relevant Class of Shares of the Sub-fund on the first Valuation Day since inception (or since the last Pay-out) and the last Valuation Day of the Financial Year and the percentual change in the simple daily equivalent of the relevant Index or Hurdle Rate, as defined in Appendix I over the corresponding period.

Criteria Annual Process are met if

$$(\text{NAV last Valuation Day/NAV first Valuation Day}) > (\text{Index/Hurdle Rate last Valuation Day/Index/Hurdle Rate first Valuation Day})$$

If the Criteria Annual Process are met, the positive cumulative Performance Fee accrual will become payable to the Management Company. If the cumulative Performance accrual is negative, no Performance Fee accrual will be paid to the Management Company. In both cases, the basis for the Performance Fee calculation for the next Financial Year will be set to 0 and the cumulative Performance Fee accrual will be reinitiated. If the Criteria Annual Process are not met, the basis for the Performance Fee calculation for the next Financial Year will not be reinitiated and the cumulative Performance Fee accrual will not become payable to the Management Company and will not be reinitiated.

The calculation of the (percentage change in the) Index-Adjusted Net Asset Value per Share as described above will take place in accordance with the valuation method described in Section 2.7 "**Calculation of the Net Asset Value**", with the following deviations:

- the time of valuation will be aligned with the time of valuation of the Index (to the extent possible);
- dilution adjustments (as mentioned in Section 2.7 "**Calculation of the Net Asset Value**" under "Swing pricing"), if any, will not be taken into account;

- it will be corrected for dividend distributions; and
- it will be net of all other fees and expenses and excluding the effect of subscriptions and redemptions.

## APPENDIX VI – BENCHMARKS

The table below stipulates whether the Sub-funds use a benchmark and for which purpose:

- Asset allocation: The Sub-fund is actively managed and uses – to a certain extent – a Benchmark or a combination of Benchmarks in defining the asset allocation of the portfolio, still allowing the Management Company and Portfolio Managers to have discretion over the composition of its portfolio subject to the investment objectives.
- Performance fee calculation: the Sub-fund uses the Benchmark in computing the performance fee.
- Not in scope of the Benchmark Regulation: the Sub-fund does not use an index or uses an index in a way which is not in scope of the Benchmark Regulation.
- ESG characteristics: The methodology of the Benchmark takes into account ESG factors that may either be aligned with the ESG characteristics promoted by the Sub-fund(s) or with the sustainable investment objectives pursued by the Sub-fund(s).

The methodology used for the calculation of the benchmarks can be found on the website of the relevant benchmark administrators.

| Sub-fund                                                        | Benchmark used                              | Asset allocation | Performance fee calculation | Not in scope of the Benchmark Regulation <sup>3</sup> | ESG characteristics |

<sup>3</sup> ESMA and the national competent authorities are currently in the process of gradually updating and migrating benchmark-related data in the register, a process which is expected to be completed by 30 September 2026. During this update period, the registration status of certain Benchmarks and/or their administrators may be pending or undergoing review. As a result, the information contained in this table may not be up to date. The status of the Benchmarks and their administrators in the ESMA register will be monitored and all necessary steps will be taken to ensure ongoing compliance with the Benchmark Regulation, including any obligations applicable following the expiration of the transitional framework for third-country benchmarks.

## Benchmark Disclaimers

### Bloomberg

Bloomberg® and Bloomberg Indices are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the index (collectively, "Bloomberg"), and have been licensed for use for certain purposes by the Company. The products are not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the product(s) or any member of the public regarding the advisability of investing in securities generally or in the product(s) particularly. The only relationship of Bloomberg to the Company is the licensing of certain trademarks, trade names and service marks and of the Bloomberg indices, which is determined, composed and calculated by BISL without regard to the Company or the product(s). Bloomberg has no obligation to take the needs of the Company or the owners of the product(s) into consideration in determining, composing or calculating the Bloomberg indices. Bloomberg is not responsible for and has not participated in the determination of the timing of, prices at, or quantities of the product(s) to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to products customers, in connection with the administration, marketing or trading of the product(s).

BLOOMBERG DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE BLOOMBERG INDICES OR ANY DATA RELATED THERETO AND SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. BLOOMBERG DOES

NOT MAKE ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE COMPANY, OWNERS OF THE PRODUCT(S) OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE BLOOMBERG INDICES OR ANY DATA RELATED THERETO. BLOOMBERG DOES NOT MAKE ANY EXPRESS OR IMPLIED WARRANTIES AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE BLOOMBERG INDICES OR ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, TO THE MAXIMUM EXTENT ALLOWED BY LAW, BLOOMBERG, ITS LICENSORS, AND ITS AND THEIR RESPECTIVE EMPLOYEES, CONTRACTORS, AGENTS, SUPPLIERS, AND VENDORS SHALL HAVE NO LIABILITY OR RESPONSIBILITY WHATSOEVER FOR ANY INJURY OR DAMAGES—WHETHER DIRECT, INDIRECT, CONSEQUENTIAL, INCIDENTAL, PUNITIVE OR OTHERWISE—ARISING IN CONNECTION WITH THE PRODUCT OR BLOOMBERG INDICES OR ANY DATA OR VALUES RELATING THERETO—WHETHER ARISING FROM THEIR NEGLIGENCE OR OTHERWISE, EVEN IF NOTIFIED OF THE POSSIBILITY THEREOF.

#### ICE Bank of America Merrill Lynch

Source ICE data indices, llc ("ICE data"), is used with permission. ICE® is a registered trademark of ICE data or its affiliates. ICE data, its affiliates and their respective third party suppliers disclaim any and all warranties and representations, express and/or implied, including any warranties of merchantability or fitness for a particular purpose or use, including the indices, index data and any data included in, related to, or derived therefrom. Neither ICE data, its affiliates nor their respective third party suppliers shall be subject to any damages or liability with respect to the adequacy, accuracy, timeliness or completeness of the indices or the index data or any component thereof, and the indices and index data and all components thereof are provided on an "as is" basis and your use is at your own risk. ICE data, its affiliates and their respective third party suppliers do not sponsor, endorse, or recommend the Company, or any of its products or services.

#### MSCI

Source MSCI. MSCI makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any MSCI data contained herein. The MSCI data may not be further redistributed or used as a basis for other indices or any securities or financial products. This report is not approved, endorsed, reviewed or produced by MSCI. None of the MSCI data is intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such.

#### Solactive

Solactive AG ("Solactive") is the licensor of the "index". The financial instruments that are based on the index are not sponsored, endorsed, promoted or sold by Solactive in any way and Solactive makes no express or implied representation, guarantee or assurance with regard to: (a) the advisability in investing in the financial instruments; (b) the quality, accuracy and/or completeness of the index; and/or (c) the results obtained or to be obtained by any person or entity from the use of the index. Solactive does not guarantee the accuracy and/or the completeness of the index and shall not have any liability for any errors or omissions with respect thereto. Notwithstanding Solactive's obligations to its licensees, Solactive reserves the right to change the methods of calculation or publication with respect to the index and Solactive shall not be liable for any miscalculation of or any incorrect, delayed or interrupted publication with respect to the index. Solactive shall not be liable for any damages, including, without limitation, any loss of profits or business, or any special, incidental, punitive, indirect or consequential damages suffered or incurred as a result of the use (or inability to use) of the index.

#### S&P

S&P DOW JONES INDICES DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDEX, INTELLECTUAL PROPERTY, SOFTWARE, OR ANY DATA RELATED THERETO OR ANY COMMUNICATION WITH RESPECT THERETO, INCLUDING, ORAL, WRITTEN, OR ELECTRONIC COMMUNICATIONS. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. S&P DOW JONES INDICES MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY THE COMPANY, OWNERS OF THE PRODUCT, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX, INTELLECTUAL PROPERTY, SOFTWARE, OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME, OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE.

## APPENDIX VII – OVERVIEW PAYING AGENTS, REPRESENTATIVE OFFICES, FACILITY AGENTS

### *AUSTRIA – Paying Agent*

Raiffeisen Bank International AG  
Am Stadtpark 9  
A-1030 Wien

### *BELGIUM – Paying Agent*

CACEIS Bank, Belgium Branch  
Avenue du Port 86C b 320  
1000 Brussel

### *DENMARK – Paying Agent*

Skandinaviska Enskilda Banken AB Copenhagen branch  
Bernstorffsgade 50  
1577 Copenhagen V

### *GERMANY – Information Agent*

Robeco Deutschland, Zweigniederlassung der Robeco Institutional Asset Management B.V.  
Taunusanlage 19  
60325 Frankfurt am Main

### *FRANCE – Centralising and Financial Agent*

BNP PARIBAS SECURITIES SERVICES  
3 rue d'Antin  
75002 Paris

### *IRELAND – Facility Agent*

J.P. Morgan Bank Administration Services (Ireland) Limited  
200 Capital Dock  
79 Sir John Rogerson's Quay  
Dublin 2D02 RK 57 Ireland

### *ITALY – Paying Agent*

ALLFUNDS BANK S.A.U., Milan Branch  
Via Bocchetto 6  
20123 Milano

Banco Bilbao Vizcaya Argentaria, S.A. – Succursale italiana  
Corso Giacomo Matteotti 10  
20121 Milano

Banca Sella Holding S.p.A.  
Servizio Banca Corrispondente  
Piazza Gaudenzio Sella, 1  
13900 Biella

BNP Paribas Securities Services  
Piazza Lina Bo Bardi 3  
20124 Milano

# 1. GLOBAL EQUITY SUB-FUNDS

## a) Robeco BP Global Premium Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP Global Premium Equities

Legal entity identifier: 2138001L9IU6WM5R6H47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

## What environmental and/or social characteristics are promoted by this financial product?

### Sustainability

**indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

### What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco BP Global Premium Equities is an actively managed fund that invests in stocks globally. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>4</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>4</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

#### What is the minimum share of investments in transitional and enabling activities?

0%.

#### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

## b) Robeco QI Global Conservative Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI Global Conservative Equities

**Legal entity identifier:** 213800OYIDN8AF8MZFO4

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

- Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco QI Global Conservative Equities is an actively managed fund that invests in low-volatility stocks in developed and Emerging Countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>

3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies  
**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.  
**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>5</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth).

<sup>5</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

c) Robeco Global Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Stars Equities

Legal entity identifier: 213800STHRWFUZJPFC10

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

447 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index, referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.

### ● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

***The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.***

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

***Any other sustainable investments must also not significantly harm any environmental or social objectives.***

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Global Stars Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

### What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of: **turnover** reflecting the share of revenue from green activities of investee companies  
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.  
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>6</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and

<sup>6</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

among others have greenhouse gas emission levels corresponding to the best performance.

### ***What is the minimum share of investments in transitional and enabling activities?***

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

d) Robeco Emerging Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Stars Equities

Legal entity identifier:  
213800QZQKHD6N2C0791

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

### What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Emerging Stars Equities is an actively managed fund that invests in Emerging Countries equities all over the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

### **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>7</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>7</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

**What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-

fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco Emerging Markets Equities is an actively managed fund that invests in stocks in Emerging Countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>8</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?
- 0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

<sup>8</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

## f) Robeco QI Emerging Markets Active Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Emerging Markets Active Equities**

**Legal entity identifier: 21380047HP5WHXG9ER08**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
7. The Sub-fund's weighted average ESG score compared to the General Market Index.

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Emerging Markets Active Equities is an actively managed fund and invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies

**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>9</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>9</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**  
0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

g) Robeco QI Global Momentum Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Momentum Equities

Legal entity identifier: 213800UIRPLXU9EX9K84

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
6. The Sub-fund's weighted average ESG score compared to the General Market Index.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Momentum Equities is an actively managed fund that invests in stocks in developed and Emerging Countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of: **turnover** reflecting the share of revenue from green activities of investee companies **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy. **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>10</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

<sup>10</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## h) Robeco QI Global Developed 3D Enhanced Index Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI Global Developed 3D Enhanced Index Equities

**Legal entity identifier:** 213800XPIJOYMY8KOZ42

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 60% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
5. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the General Market Index.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.
7. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Developed 3D Enhanced Index Equities is actively managed and will apply Robeco's "3D" investment strategy, which seeks to consider risk, return and sustainability in the Sub-fund's portfolio. The Sub-fund's portfolio will be optimised using a quantitative process to target returns in excess of the Benchmark, to target better sustainability characteristics than the Benchmark, while managing risk compared to the Benchmark.

The Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework, and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's weighted Carbon footprint is at least 30% better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
5. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 60% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>11</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>11</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

#### What is the minimum share of investments in transitional and enabling activities?

0%.

#### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco QI Emerging Markets Enhanced Index Equities is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies

**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>12</sup>

Yes

In fossil gas

In nuclear energy

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or

<sup>12</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

## What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

## Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

j) Robeco QI Emerging Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Conservative Equities

Legal entity identifier: 213800KLJOYPGHWQQA07

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
7. The Sub-fund's weighted average ESG score compared to the General Market Index.

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Emerging Conservative Equities is an actively managed fund that invests in low-volatility stocks in Emerging Countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC

or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies

**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>13</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear**

<sup>13</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

k) Robeco QI Global Value Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Value Equities

Legal entity identifier: 2138008GOSJ2FFNDBA15

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

☒

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not** make any sustainable investments

20 August 2026

520 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Value Equities is an actively managed fund that invests in stocks in developed and Emerging Countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:  
**turnover** reflecting the share of revenue from green activities of investee companies  
**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.  
**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>14</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas

<sup>14</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

emission levels corresponding to the best performance.

### ***What is the minimum share of investments in transitional and enabling activities?***

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

I) Robeco QI Emerging Markets 3D Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets 3D Active Equities

Legal entity identifier: 549300CZ8S23ZD8TW786

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☒ ☐

Yes

☒ ☐ ☒

No

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
5. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.
7. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive

(+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco QI Emerging Markets 3D Active Equities is actively managed and will apply Robeco's "3D" investment strategy, which seeks to consider risk, return and sustainability in the Sub-fund's portfolio. The Sub-fund's portfolio will be optimised using a quantitative process to target returns in excess of the Benchmark, to target better sustainability characteristics than the Benchmark, while managing risk compared to the Benchmark.

The Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework, and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
3. The Sub-fund's weighted Carbon footprint is at least 30% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

5. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies  
**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.  
**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>15</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>15</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**  
0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because

the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## m) Robeco QI Global Developed Conservative Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Developed Conservative Equities is an actively managed fund that invests in low-volatility stocks in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>16</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>16</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

**What is the minimum share of investments in transitional and enabling activities?**

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum

share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

n) Robeco QI Global Developed Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco QI Global Developed Active Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>17</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

<sup>17</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## o) Robeco QI Customized Emerging Markets Enhanced Index Equities I

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI Customized Emerging Markets Enhanced Index Equities I

**Legal entity identifier:** 213800789L405A9NK030

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✘ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Customized Emerging Markets Enhanced Index Equities I is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>18</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

<sup>18</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## p) Robeco QI Global Quality Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI Global Quality Equities

**Legal entity identifier:** 2138007QXX6VPXTZMR14

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco QI Global Quality Equities is an actively managed fund that invests in stocks in developed and Emerging Countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies

**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>19</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>19</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**  
0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

## What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

## Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

q) Robeco QI Global SDG & Climate Conservative Equities

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Global SDG & Climate Conservative Equities**

**Legal entity identifier:** 213800BVPSWSGDFYVC36

## Sustainable investment objective

**Does this financial product have a sustainable investment objective?**

● ●

☒

Yes

No

☒

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 10%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the Carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C. The Sub-fund has a carbon-reduction objective and uses the MSCI All Country World EU PAB Overlay Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

## What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted Carbon footprint compared to the Paris-Aligned Benchmark.
3. The Sub-fund's weighted Water and Waste footprint score compared to the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.
6. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework.
7. The Sub-fund's weighted average ESG score compared to the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the Regulation on EU Climate Benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

## How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
  - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

## What investment strategy does this financial product follow?

Robeco QI Global SDG & Climate Conservative Equities is an actively managed fund that invests globally in low-volatility stocks of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2°C. The Sub-fund's long-term aim is to achieve returns equal to, or greater than, those on global equity markets with lower expected downside risk. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's

**The investment strategy** guides investment decisions based on factors such as

investment objectives and risk tolerance.

good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● ***What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?***

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's weighted Carbon footprint is better than that of the Paris-Aligned Benchmark.
3. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
6. The Sub-fund excludes all negative SDG scores (-3, -2 or -1).
7. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio, but is not required to exceed 95%.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and sustainable investments that adhere to the Paris-Aligned Benchmark criteria. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>20</sup>?**

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 50%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

<sup>20</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

## What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

## What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

## Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI All Country World EU PAB Overlay Index as a reference index to meet the Carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

## How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.

- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data such as MSCI Climate Change Metrics, MSCI Climate Value-at-Risk, MSCI ESG Sustainable Impact Metrics, MSCI ESG Controversies and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the Carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and Carbon footprint of companies.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

**Where can I find more product specific information online?**

## r) Robeco QI Global Developed Enhanced Index Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI Global Developed Enhanced Index Equities

**Legal entity identifier:** 213800W6NOMU3QTJAP16

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.
7. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
7. The number of holdings and agenda items voted.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Developed Enhanced Index Equities is an actively managed fund that invests in stocks of companies in developed markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
7. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear**

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>21</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>21</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### **What is the minimum share of investments in transitional and enabling activities?**

0%.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

s) Robeco Sustainable Emerging Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Emerging Stars Equities

Legal entity identifier: 2138000ZKXE3LA1XDP06

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes investment in at least half of its portfolio in holdings that contribute to the UN Sustainable Development Goals (SDGs).
7. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of portfolio holdings with a positive SDG score based on the internally developed SDG Framework.
7. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any

controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✘ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Sustainable Emerging Stars Equities is an actively managed fund that invests in equities in Emerging Countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
6. The Sub-fund invests at least 50% of its portfolio in companies that hold a positive SDG score based on the internally developed SDG Framework.
7. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance**  
practices include  
sound management  
structures, employee  
relations,  
remuneration of staff  
and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules. **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>22</sup>

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

<sup>22</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

t)Robeco QI Emerging Markets 3D Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
5. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.
7. The proportion of companies that have a high negative SDG score (-3) based on the internally developed SDG Framework.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Emerging Markets 3D Enhanced Index Equities is actively managed and will apply Robeco's "3D" investment strategy, which seeks to consider risk, return and sustainability in the Sub-fund's portfolio. The Sub-fund's portfolio will be optimised using a quantitative process to target returns in excess of the Benchmark, to target better sustainability characteristics than the Benchmark, while managing risk compared to the Benchmark. The Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
3. The Sub-fund's weighted Carbon footprint is at least 30% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

5. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>23</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>23</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### ● What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

## u) Robeco Global SDG Equities

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Product name: Robeco Global SDG Equities**

**Legal entity identifier:** 213800NVKQZ68I4DWL83

## Sustainable investment objective

**Does this financial product have a sustainable investment objective?**

● ● ☐ Yes

☒ ☐ ☐ **No**

✖ It will make a minimum of **sustainable investments with an environmental objective: 1%**

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

- ✗ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

✖ It will make a minimum of **sustainable investments with a social objective: 50%**

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## What is the sustainable investment objective of this financial product?

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The Sub-fund's sustainable investment objective is to advance the United Nations Sustainable Development Goals (UN SDGs) by investing in companies whose business models and operational practices are aligned with targets defined by the 17 UN SDGs.

Sub-fund does not have a carbon-reduction objective and there is no reference benchmark designated for the purpose of attaining the sustainable objective promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

### ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

### ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Global SDG Equities is an actively managed fund that invests globally in companies that take action to advance the UN Sustainable Development Goals. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund solely invests in companies with a positive SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>24</sup>?**

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 1%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

are sustainable investments with an environmental objective that **do not take into account**

<sup>24</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 50% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

### What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

### Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## v) Robeco Global Engagement Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Global Engagement Equities

**Legal entity identifier:** 2138007Y9W8ZMOEUOL93

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that avoid significant harm, and aim to improve their contribution, to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behaviour, controversial weapons, and tobacco. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with an SDG score of -1, 0 (zero), +1 or +2 based on the internally developed SDG Framework.
2. The number of companies actively engaged.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Global Engagement Equities is an actively managed fund that invests in a concentrated selection of global stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a -1, 0 (zero) or positive SDG score. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) and all high positive SDG scores (+3) for selection of new investment cases based on the internally developed SDG Framework.
  - The Sub-fund can only hold high or medium positive SDG scores (+3) when a company receives an upgrade of their SDG score after successfully completed engagement that started with an initial -1, 0 +1 or +2 SDG score at investment. The Sub-fund can hold up to 20% of such holdings that are rated SDG (+3) after engagement has been successful for a period of 6 months.
  - (Successfully completed engagement: When a company progresses on the targets identified and fulfills the key performance indicators as established at the start of the engagement. Such targets can be linked with internal frameworks like the SDG framework).
2. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement (resulting in

higher SDG scores) or (b) an unsuccessful engagement, then a selling strategy will be designed for divestment.

3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusionlist.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>25</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>25</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## w) Robeco QI Emerging Markets 3D Enhanced Index Equities II

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Emerging Markets 3D Enhanced Index Equities II**

**Legal entity identifier: 213800G3D5YDMZG9Z661**

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
5. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the General Market Index.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.
7. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Emerging Markets 3D Enhanced Index Equities II is actively managed and will apply Robeco's "3D" investment strategy, which seeks to consider risk, return and sustainability in the Sub-fund's portfolio. The Sub-fund's portfolio will be optimised using a quantitative process to target returns in excess of the Benchmark, to target better sustainability characteristics than the Benchmark, while managing risk compared to the Benchmark.

The Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's weighted Carbon footprint is at least 30% better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
5. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

### ● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>26</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>26</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## x) Robeco Emerging Markets Ex China Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Emerging Markets Ex China Equities

**Legal entity identifier:** 213800CM8YS7HH6MXS55

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Emerging Markets ex China Equities is an actively managed fund that invests in stocks in Emerging Countries across the world with the exception of China. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

### **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>27</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>27</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%. Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

y) Robeco Emerging Markets Climate Transition Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Climate Transition Equities

Legal entity identifier: 2138008JOR5BVQBE8C96

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

647 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investments in companies that contribute to the climate transition. These Transition-related Investments are identified to be making and/or enabling the transitional efforts required to limit global temperature increase to well-below 2°C degrees, aligned with the goals of the Paris Agreement.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition.  
More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Emerging Markets Climate Transition Equities is an actively managed Sub-fund that invests in equities in Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to the climate transition:
  - a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
  - b. Investments enabling the transition: entities that are involved in activities such as products, technologies and services, that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate the decarbonization of the economy, measured through the Robeco SDG

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13, based on the Robeco SDG Framework, indicating companies that provide solutions to enable climate change mitigation.

2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>28</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective **that do not**

<sup>28</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

**More product-specific information can be found on the website:**

<https://www.robeco.com/en/funds/>

## z) Robeco Sustainable Global Stars Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Sustainable Global Stars Equities

**Legal entity identifier:** TBD

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☐ It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%

☒ ☐ ☒ **No**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a substantially lower Carbon footprint than the general market index, referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes investment in at least half of its portfolio in holdings that contribute to the UN Sustainable Development Goals (SDGs).
7. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint score compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of portfolio holdings with a positive SDG score based on the internally developed SDG Framework.
7. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Sustainable Global Stars Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
3. The Sub-fund's weighted Carbon footprint score is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

6. The Sub-fund invests at least 50% of its portfolio in companies that hold a positive SDG score based on the internally developed SDG Framework.
7. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>29</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to

<sup>29</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**  
0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

aa) Robeco QI Global Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Enhanced Index Equities

Legal entity identifier: 213800715456NTW55Q58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.
7. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
7. The number of holdings and agenda items voted.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to society and environment. Further, the operational processes involved in

creating such products are checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Enhanced Index Equities is an actively managed fund that invests in stocks of companies globally. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
7. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

- ***What is the policy to assess good governance practices of the investee companies?***

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### **What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>30</sup>

<sup>30</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## bb) Robeco QI Emerging Markets Enhanced Index Equities Plus

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Emerging Markets Enhanced Index Equities Plus**

**Legal entity identifier: 213800ZDALBDFQMLN133**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## **What environmental and/or social characteristics are promoted by this financial product?**

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to society and environment. Further, the operational processes involved in creating such products are checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between

high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Emerging Markets Enhanced Index Equities Plus is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

### What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Asset allocation** describes the share of investments in specific assets.

### What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>31</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>31</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## cc) Robeco All Country Global Stars Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco All Country Global Stars Equities

**Legal entity identifier:** 213800VKPVVQTESDP655

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund promotes having a lower Carbon footprint than the general market index, referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco All Country Global Stars Equities is an actively managed fund that invests in stocks in all countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.**

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated

sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>32</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas

<sup>32</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks are**

indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

2. REGIONAL & COUNTRY EQUITY SUB-FUNDS

a) Robeco Asia-Pacific Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Asia-Pacific Equities

Legal entity identifier: 213800R6QI6SB393PI50

### Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

No

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

695 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Asia-Pacific Equities is an actively managed fund that invests in stocks in developed and emerging Asian-Pacific countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>33</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>33</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco European Stars Equities is an actively managed fund that invests in equities of companies that are domiciled in Europe. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated

**The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.**

sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>34</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

- What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>34</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## c) Robeco QI European Conservative Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI European Conservative Equities

**Legal entity identifier:** 2138001XRMBVMGLO9954

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

☒ ☐ **Yes**

☒ ☐ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI European Conservative Equities is an actively managed fund that invests in low-volatility stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>35</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>35</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-

fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## d) Robeco BP US Premium Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco BP US Premium Equities

**Legal entity identifier:** 213800NHT998V29TM914

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco BP US Premium Equities is an actively managed fund that invests in stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational**

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

expenditure (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>36</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>36</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## e) Robeco Chinese Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Chinese Equities

**Legal entity identifier:** 213800TJUGS6VH4REL60

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Chinese Equities is an actively managed fund that invests in listed stocks of leading Chinese companies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>37</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable

<sup>37</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

economic  
activities under  
the EU  
Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## f) Robeco Indian Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Indian Equities

**Legal entity identifier:** 213800F2XL8JYTUE403

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Indian Equities is an actively managed fund that invests in stocks listed on the major Indian stock exchanges. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>38</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

- What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic

<sup>38</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under the  
EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## g) Robeco Asian Stars Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

Product name: Robeco Asian Stars Equities

Legal entity identifier: 213800G5JUR75POVU193

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>39</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>39</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## h) Robeco Sustainable Asian Stars Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Sustainable Asian Stars Equities

**Legal entity identifier:** 213800C3QE3BF5TD6K08

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

|                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes investment in at least half of its portfolio in holdings that contribute to the UN Sustainable Development Goals (SDGs).
7. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of portfolio holdings with a positive SDG score based on the internally developed SDG Framework.
7. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco Sustainable Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

6. The Sub-fund invests at least 50% of its portfolio in companies that hold a positive SDG score based on the internally developed SDG Framework.
7. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>40</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>40</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## i) Robeco BP US Large Cap Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco BP US Large Cap Equities

**Legal entity identifier:** 213800JOQ7MWBS9GH642

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an

ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco BP US Large Cap Equities is an actively managed fund that invests in large-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

investee  
companies.

● ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>41</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

<sup>41</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

#### What is the minimum share of investments in transitional and enabling activities?

0%.

#### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

## What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

## Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## j) Robeco BP US Select Opportunities Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco BP US Select Opportunities Equities**

**Legal entity identifier: 213800YIJJ667CDPK983**

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an

ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

### What investment strategy does this financial product follow?

Robeco BP US Select Opportunities Equities is an actively managed fund that invests in mid-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>42</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>42</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## k) Robeco Chinese A-share Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Chinese A-share Equities

**Legal entity identifier:** 213800GE9C6GVRJ3AM62

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

|                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Chinese A-share Equities is an actively managed fund that invests in Chinese A-shares. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 20% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
5. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>43</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>43</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## I) Robeco QI Chinese A-share Active Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Chinese A-share Active Equities**

**Legal entity identifier: 2138000ARI6HPJH22T56**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

☒ ☐ **Yes**

☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco QI Chinese A-share Active Equities is an actively managed fund that invests in stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>44</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>44</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum

share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## m) Robeco QI Chinese A-share Conservative Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Chinese A-share Conservative Equities**

**Legal entity identifier: 213800XWLW8UPEKC9R39**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## **What environmental and/or social characteristics are promoted by this financial product?**

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco QI Chinese A-share Conservative Equities is an actively managed fund that invests in low-volatility stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>45</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

<sup>45</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## n) Robeco QI European Value Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI European Value Equities**

**Legal entity identifier: 213800SX488DS47PZG42**

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco QI European Value Equities is an actively managed fund that invests in stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>46</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

<sup>46</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective **that do not take into account** the criteria for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

o) Robeco QI US Beta Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI US Beta EquitiesLegal entity identifier: 2138002ROX4K9YH3D187

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 60% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

## What environmental and/or social characteristics are promoted by this financial product?

### Sustainability

**indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes having a substantially lower corporate Carbon Footprint than the General Market Index.
2. The Sub-fund promotes having a substantially lower Water and Waste footprint than the General Market Index.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund has a substantially better weighted average ESG score than the general market index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.
6. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted corporate Carbon Footprint compared to the footprint of the General Market Index.
2. The Sub-fund's weighted Water and Waste footprint scores compared to the footprint of the General Market Index.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion policy.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
6. The number of holdings and agenda items voted.
7. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals, that have both social and environmental objectives. Robeco uses its proprietary SDG Framework and related SDG scores to determine which issuers constitute a sustainable investment as referred to in art 2(17) SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. For sustainable investments, the PAI indicators have been taken into account by ensuring that the investments do no significant harm to any environmental or social objective. For this purpose, many PAI indicators are either directly or indirectly included in Robeco's SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the product page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

The Sub-fund is an actively managed fund that invests in equities of companies in the United States of America. The selection of these stocks is based on a quantitative model as described in the investment policy paragraph in Appendix I of this prospectus.

Beta stands for the investment management approach of the Sub-fund that follows the sole purpose of pursuing the sustainable investment objective of the Sub-fund. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's SDG framework, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted Carbon footprint is 50% better than that of the General Market Index.
2. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 10% better than that of the General Market Index, measured as a ratio.
6. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

- ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

### **What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 60% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>47</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>47</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG

3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## p) Robeco QI European Active Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI European Active Equities

**Legal entity identifier:** 213800SATZYOKMAPLJ87

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI European Active Equities is an actively managed fund that invests in stocks of companies in Europe. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

### What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>48</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

<sup>48</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## q) Robeco Transition Asian Equities

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Robeco Transition Asian Equities

**Legal entity identifier:** 2138007MXBYFOD9BCI87

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in companies that contribute to the climate transition, nature or biodiversity transition and/or social transition. These Transition-related Investments are identified to be making and/or enabling the transitional efforts required to limit global temperature increase to well-below 2°C degrees aligned with the goals of the Paris Agreement, to halt and reverse biodiversity loss to put nature on a path to recovery for the benefit of people and planet, and to advance relevant targets for social development.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference Benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition, nature or biodiversity transition and/or social transition.  
More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals

such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Transition Asian Equities is an actively managed Sub-fund that invests in equities in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to climate transition, nature or social transition:
  - a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
  - b. Investments enabling the transition: entities that provide products and services that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate an economy-wide transition, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13 (contributing to the climate transition), a positive score on SDG 12, 14 and/or SDG 15 (contributing to the nature or biodiversity transition) and/or a

positive score on SDG 1 – 6, SDG 8 - 11 and/or SDG 16 and 17 (contributing to the social transition). The framework indicates companies and/or entities that provide solutions to enable climate change mitigation, halt or reverse biodiversity loss and/or advance social development.

2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

**Asset allocation**

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>49</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

<sup>49</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

3. THEME EQUITY SUB-FUNDS

a) Robeco New World Financials

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco New World Financials

Legal entity identifier: 213800WE9J70V8DOET07

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

☐

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

☒

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

☐

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒

with a social objective

☐

It promotes E/S characteristics, but **will not** make any sustainable investments

20 August 2026

857 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco New World Financials is an actively managed fund that invests in equities from developed and Emerging Countries all over the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

5. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>50</sup>

Yes

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally

<sup>50</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable  
economic  
activities under  
the EU  
Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

b) Robeco Sustainable Property Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Property Equities

Legal entity identifier: 2138003BSHS5NJ9EBX10

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

|                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

### What investment strategy does this financial product follow?

Robeco Sustainable Property Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
6. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>51</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>51</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## c) Robeco Global Consumer Trends

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Robeco Global Consumer Trends

**Legal entity identifier:** 213800PFG7CLST9A1742

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## *What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?*

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco Global Consumer Trends is an actively managed fund that invests in stocks in developed and Emerging Countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk->

[policy.pdf](#)). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>52</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>52</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

<https://www.robeco.com/en/funds/>

## d) Robeco Global Multi-Thematic

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Global Multi-Thematic

**Legal entity identifier:** 2138006ECAW1JTNY4V89

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
6. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
6. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Global Multi-Thematic is an actively managed fund that invests worldwide in equities from developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
5. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
6. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>53</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic

<sup>53</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under  
the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

e) Robeco Digital Innovations

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Digital Innovations      Legal entity identifier: 213800WH91CRLWH4AL56

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

897 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Digital Innovations is an actively managed fund that invests worldwide in equities from developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance**  
practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation**  
describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>54</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>54</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11

(Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

## f) Robeco FinTech

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco FinTech

**Legal entity identifier:** 213800XVWPYZAY58YG68

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco FinTech is an actively managed fund that invests in stocks in developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

### **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>55</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>55</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth).

growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## g) Robeco Circular Economy

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

Product name: Robeco Circular Economy

Legal entity identifier: 21380076KKDPDXSFG955

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

☒ Yes

☐ No

It will make a minimum of **sustainable investments with an environmental objective: 5%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 45%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The Sub-fund has the following sustainable investment objective: to finance solutions that support the transition from traditional production and consumption patterns toward a circular economy. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Zero Hunger (SDG 2), Good health and well-being (SDG 3), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Responsible consumption and production (SDG 12).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the EU Taxonomy regulation:

- Substantial contribution to the transition to a circular economy
- Pollution prevention and control
- Sustainable use and protection of water and marine resources

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

## ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

## ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Circular Economy is an actively managed fund that invests globally in companies aligned with circular economy principles. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the

**Good governance practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

**turnover** reflecting the share of revenue from green activities of investee companies  
**capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>56</sup>?**

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 5%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria for**

<sup>56</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

### What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

### Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## h) Robeco Smart Energy

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

Product name: Robeco Smart Energy

Legal entity identifier: 213800XOKIZRP1SLWA28

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

**Yes****No**

It will make a minimum of **sustainable investments with an environmental objective: 15%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 35%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The sustainable investment objective of the Sub-fund is to further the transformation of the global energy sector through investments in clean energy production sources, energy efficient products and infrastructure as well as technologies supporting the electrification of the industrial, transportation and heating sectors. These activities are linked to following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund intends to contribute to the environmental objectives of climate change mitigation under the Taxonomy regulation.

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of companies to attain the Sub-fund's theme as described within the binding elements.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

## *How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

## *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are

considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Smart Energy is an actively managed fund that invests globally in companies providing technologies for clean energy production, distribution, power management infrastructure and energy efficiency. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund invests 80% in companies that are related to the Sub-fund's theme e.g. companies that have a meaningful revenue exposure to activities in clean energy production sources, energy infrastructure and management, as well as solutions that improve energy efficiency for sectors such as industrials, buildings, transportation or data centers.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

**Good governance practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments and the two subsets are not equal the total minimum proportion of sustainable investments (90%) in the asset allocation section. The same apply for the further split of the total minimum of environmentally sustainable investments (15%) into the minimum commitments of taxonomy-aligned (2%) and other environmental sustainable investments (5%), where the lack of data availability and coverage also influences the level of the minimum commitments. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of climate change mitigation under the EU Taxonomy.

The Sub-fund intends to contribute to the environmental objectives of climate change mitigation under the EU Taxonomy. The Sub-fund commits to a minimum share of 2% of Taxonomy-aligned activities. The Sub-fund uses Turnover as the primary metric for Taxonomy alignment because it aligns with the existing revenues of companies invested by the Sub-fund. The minimum proportion of Taxonomy-aligned activities shall be calculated covering all assets of the Sub-funds in accordance with Article 17 of the EU Taxonomy Regulation. The Sub-fund only makes investments in companies and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels

## Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>57</sup>?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>57</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 15%. The Sub-fund commits to a minimum share of sustainable investments of 5% that are not alignment with the EU Taxonomy because of the lack of availability of data and coverage in the fund market. The 'Other' environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

### What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

### **What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

### **Is a specific index designated as a reference benchmark to meet the sustainable investment objective?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

### **Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## i) Robeco Smart Materials

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Smart Materials

**Legal entity identifier:** 213800HUVXY434VECO29

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: 15%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 35%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The sustainable investment objective of the Sub-fund is to help mitigate the resource scarcity challenge within industries while supporting economic growth. The Sub-fund targets investing in innovative materials and process technologies that use less or substitute resources, are more scalable, deliver efficiency gains and enable more circular systems including recycling and reuse of materials. These activities are linked to the following United Nations Sustainable Development Goals (SDGs), which the Sub-fund targets: Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), and Responsible consumption and production (SDG 12) as well as Climate action (SDG 13).

A part of the investments made by the Sub-fund intends to contribute to the environmental objective of climate change mitigation under the Taxonomy regulation.

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of companies selected to attain the Sub-fund's theme as described within the binding elements.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

## *How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

## *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Smart Materials is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores reliant on approval from the internal Committee.
2. The Sub-fund invests 80% in companies that are related to the Sub-fund's theme e.g. companies that have a meaningful revenue exposure to technologies, products or services relating to the extraction, transformation or efficient processing of innovative materials, technologies enabling more automation and efficiency in industrial manufacturing as well as the recycling and reuse of materials.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry

**Good governance practices** include sound management structures,

employee relations, remuneration of staff and tax compliance.

established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

## Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>58</sup>?

Yes:

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

## What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>58</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 15%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

### **What is the minimum share of sustainable investments with a social objective?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

### **What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

**Is a specific index designated as a reference benchmark to meet the sustainable investment objective?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## j) Robeco Smart Mobility

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

Product name: Robeco Smart Mobility

Legal entity identifier: 21380025AXSQN7Y4RV82

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

☒ Yes

☐ No

It will make a minimum of **sustainable investments with an environmental objective: 15%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 35%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The sustainable investment objective of the Sub-fund is to support the transformation of the global transportation sector by investing in technologies enabling its electrification as well as in developments in the fields of connectivity and autonomous driving helping to reduce pollution, decongest cities and improve traffic safety. These activities are linked to the following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund intends to contribute to the environmental objective of climate change mitigation under the Taxonomy regulation.

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of companies selected to attain the Sub-fund's theme as described within the binding elements.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

## *How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

## *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Smart Mobility is an actively managed fund that invests globally in companies benefiting from the electrification of transportation. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund invests 80% in companies that are related to the Sub-fund's theme e.g. companies that have a meaningful revenue exposure to or a leading market position or technology in electric or fuel cell vehicle production including components and the entire value chain, clean energy supply through smart networks and charging infrastructure, as well as shared mobility and autonomous driving.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry

**Good governance** practices include sound management structures,

employee relations, remuneration of staff and tax compliance.

established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational

## How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

activities of  
investee  
companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>59</sup>?

Yes:

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>59</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### ***What is the minimum share of investments in transitional and enabling activities?***

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 15%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

### **What is the minimum share of sustainable investments with a social objective?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

### **What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

**Is a specific index designated as a reference benchmark to meet the sustainable investment objective?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The sustainable investments of the sub-fund aim to promote good health and well-being by investing in companies that contribute to an efficient healthcare system, promote health preservation and provide opportunities for people to live productive lives. These activities are linked to the following United Nations Sustainable Development Goals (UN SDGs): Zero hunger (SDG 2), Good health and wellbeing (SDG 3), and Clean water and sanitation (SDG 6).

Therefore the financial product does not take into account the EU criteria for environmentally sustainable economic activities. The Sub-fund does make sustainable investments with a social objective.

There is no reference benchmark designated for the purpose of attaining the sustainable investment objective.

## *What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?*

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as a result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## *How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

## *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Healthy Living is an actively managed fund that invests globally in companies that promote good health and well-being and contribute to an efficient healthcare system. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>60</sup>?**

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable

<sup>60</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

economic activities  
under the EU  
Taxonomy.

### What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 70% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

### What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

### Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## 1) Robeco Sustainable Water

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Product name: Robeco Sustainable Water**

**Legal entity identifier:** 2138006TSIFH5ZD97319

## Sustainable investment objective

**Does this financial product have a sustainable investment objective?**

● ● ☒ Yes

☒ ☐ ☐ **No**

✖ It will make a minimum of **sustainable investments with an environmental objective: 5%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

✖ It will make a minimum of **sustainable investments with a social objective: 45%**

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to help mitigate the global challenges related to scarcity, quality, and allocation of water. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Good health and well-being (SDG 3), Clean water and sanitation (SDG 6), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), Responsible consumption and production (SDG 12), and Life below water (SDG 14).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

## How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

## How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research

and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Sustainable Water is an actively managed fund that invests globally in companies offering products and services across the water value chain. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

investee  
companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>61</sup>?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>61</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 5%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

### **What is the minimum share of sustainable investments with a social objective?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

### **What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

**Is a specific index designated as a reference benchmark to meet the sustainable investment objective?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

m) Robeco Biodiversity Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Biodiversity Equities

Legal entity identifier: 213800YFIUFHGS8PLX94

Sustainable investment objective

Does this financial product have a sustainable investment objective?

☒ ☒ ☒ Yes

☐ ☐ ☐ No

|                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to support the sustainable use of natural resources and ecosystem services, as well as technologies, products and services that help to reduce Biodiversity threats or restore natural habitats.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The foregoing is implemented by mainly investing in companies that advance the following United Nations Sustainable Development Goals (UN SDGs): Clean Water and Sanitation (SDG 6), Sustainable Cities and Communities (SDG 11), Responsible consumption and production (SDG 12), Life below water (SDG 14) and Life on Land (SDG 15).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities identified as making or enabling the nature or biodiversity transition.
3. The number of companies which are selected for engagement
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The number of holdings and agenda items voted.
6. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Biodiversity Equities is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?*

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund invests at least 70% of the portfolio in Transition-related Investments making and enabling the nature or biodiversity transition as defined in the Glossary of Defined Terms section of this Prospectus.
3. The Sub-fund will at least engage with a minimum of 20% of investments on an annual basis which show potential for improvement on biodiversity footprint.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
6. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## *What is the policy to assess good governance practices of the investee companies?*

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

**Good governance practices** include sound management structures, employee relations,

remuneration of staff and tax compliance.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 10% sustainable investments with an environmental objective and a minimum portion of 40% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

## How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

## Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>62</sup>?

Yes:

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

## What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>62</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 10%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

### **What is the minimum share of sustainable investments with a social objective?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 40% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

### **What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

**Is a specific index designated as a reference benchmark to meet the sustainable investment objective?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

n) Robeco Global Climate Transition Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Climate Transition Equities

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investments in companies that contribute to the climate transition. These Transition-related Investments are identified to be making and/or enabling the transitional efforts required to limit global temperature increase to well-below 2°C degrees, aligned with the goals of the Paris Agreement.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition.  
More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches

of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for

any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Global Climate Transition Equities is an actively managed Sub-fund that invests in stocks of companies in developed and emerging markets across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to the climate transition:
  - a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
  - b. Investments enabling the transition: entities that are involved in activities such as products, technologies and services, that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate the decarbonization of the economy, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13, based on the Robeco SDG Framework, indicating companies that provide solutions to enable climate change mitigation.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires from the Sustainable Investment Center of Expertise.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

### What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>63</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>63</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

#### What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

#### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

#### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective.

Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

o) Robeco Gravis Digital Infrastructure Income

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Gravis Digital Infrastructure Income

Legal entity identifier: 2138000C7UH4PTYER332

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of sustainable investments with an environmental objective: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of sustainable investments with a social objective: \_\_\_\_%

It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but will not make any sustainable investments

20 August 2026

982 / 1298

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals, that have both social and environmental objectives. Robeco uses its proprietary SDG Framework and related SDG scores to determine which issuers constitute a sustainable investment as referred to in art 2(17) SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

## How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches of these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Gravis Digital Infrastructure Income is an actively managed fund that invests worldwide in securities from companies listed in developed markets. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

## What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration. A link to the good governance test is made available in the final section of this document.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by either being positive scores via Robeco's SDG Framework. The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for both hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>64</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

- What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>64</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

#### More product-specific information can be found on the website:

## 4. GLOBAL BOND SUB-FUNDS

### a) Robeco High Yield Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco High Yield Bonds

**Legal entity identifier:** 21380044N3COGER5OK12

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco High Yield Bonds is an actively managed fund that invests in high yield corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

### Good governance

practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

### Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>65</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>65</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### ***What is the minimum share of investments in transitional and enabling activities?***

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## b) Robeco Global Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Credits

Legal entity identifier: 5493003I7YFQHV1J8E29

**Environmental and/or social characteristics****Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

Robeco Global Credits is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>66</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds

2. Taxonomy-alignment of investments excluding sovereign bonds

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>66</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

<https://www.robeco.com/en/funds/>

## c) Robeco QI Global Multi-Factor Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Global Multi-Factor Credits**

**Legal entity identifier: 2138004NM2KLQ7YMDZ55**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## **What environmental and/or social characteristics are promoted by this financial product?**

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprints of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score as compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

Robeco QI Global Multi-Factor Credits is an actively managed fund that invests systematically in predominantly investment grade credits. The selection of these investments is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than those of the General Market Index.
4. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity

management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>67</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>67</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## d) Robeco QI Global Multi-Factor Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco QI Global Multi-Factor Bonds**

**Legal entity identifier: 2138009INGIOSX2F6B58**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the corporate bonds in the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes having a lower Carbon footprint than the government bonds in the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators for investments in corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the corporate bonds in the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

The Sub-fund has the following sustainability indicators for investments in government bonds:

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score on Robeco's Country Sustainability Ranking.
3. The Sub-fund's weighted carbon emissions per capita compared to the government bonds in the General Market Index.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Bonds is an actively managed fund that invests globally in bonds issued by governments, agencies and corporates. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses low-risk, quality, value, momentum and size factors to select the most attractive bonds.

The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements for investments in corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's weighted Carbon footprint of corporate bonds in portfolio are better than those of the corporate bonds in the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

4. The Sub-fund's weighted average ESG score of the corporate bonds in portfolio is better than that of the corporate bonds in the General Market Index.
5. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The Sub-fund has the following binding elements for investments in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.
3. The Sub-fund's weighted carbon emissions per capita of the government bonds in portfolio is better than that of the government bonds in the General Market Index.

#### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

#### ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

#### **What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>68</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

<sup>68</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable

investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## e) Robeco Global Short Duration Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Global Short Duration Credits

**Legal entity identifier:** 2138001CC7H5L9AYFW22

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### **What investment strategy does this financial product follow?**

Robeco Global Short Duration Credits is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds with a short maturity.

The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity

management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

#### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>69</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

#### What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>69</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## f) Robeco Corporate Hybrid Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco Corporate Hybrid Bonds**

**Legal entity identifier: 213800KXAXX8MJC82S52**

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and,

+3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

Robeco Corporate Hybrid Bonds is an actively managed fund that invests in global corporate hybrids bonds issued by non financials. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in green or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity

management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

#### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>70</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

#### What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>70</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## g) Robeco QI Global Multi-Factor High Yield

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco QI Global Multi-Factor High Yield

**Legal entity identifier:** 213800AQVRERU8HLMD03

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score as compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

### What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor High Yield is an actively managed fund that invests systematically in high-yield bonds. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

### *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 20% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>71</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>71</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## h) Robeco Credit Income

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Credit Income

**Legal entity identifier:** 213800T791C07EB3NL58

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. Investments in companies with a positive or neutral SDG score based on the internally developed SDG Framework.
2. For its allocation to Emerging Markets sovereign bonds: investments in countries with a positive or neutral SDG score based on the internally developed SDG Framework.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Robeco's SDG Framework assesses the contribution of companies and countries to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' and countries' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies and countries on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## What investment strategy does this financial product follow?

Robeco Credit Income is an actively managed fund that invests in companies and countries that contribute to realizing the UN Sustainable Development Goals (SDGs). The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. For its allocation to Emerging Markets sovereign bonds: The Sub-fund is solely invested in countries that hold a positive or neutral SDG score.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

## What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>72</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>72</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

## What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies and countries that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

## What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

## Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## i) Robeco Global SDG Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global SDG Credits

Legal entity identifier: 213800CKSU373L6J3U62

**Environmental and/or social characteristics****Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

Robeco Global SDG Credits is an actively managed fund that invests in corporate bonds in the global developed and emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund invests a minimum of 10% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

### ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>73</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

- What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

<sup>73</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## j) Robeco SDG High Yield Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco SDG High Yield Bonds

**Legal entity identifier:** 2138004EB4XIM39VFW48

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## **What environmental and/or social characteristics are promoted by this financial product?**

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco SDG High Yield Bonds is an actively managed fund that invests in global corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance

test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>74</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>74</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## k) Robeco Global Green Bonds

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**The EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Global Green Bonds

**Legal entity identifier:** 213800TZF6IC5ZUI3146

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: 70%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in Green Bonds, as well as in social and Sustainability bonds.

With these investments, the Sub-fund finances investments that contribute to environmental goals like:

- Climate change mitigation and adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- Pollution prevention, and
- Protection of healthy ecosystems.

There is a reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in Green Bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

## How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

## How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Green Bonds Principles.

For a large share of Green, Social and Sustainability bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bonds Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
  - Table 1, PAI 14 (Exposure to controversial weapons)
- For Green Bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of Green, Social or Sustainability bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to

the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

### *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

### **Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Green, Social and Sustainability bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

☐ No

### **What investment strategy does this financial product follow?**

Robeco Global Green Bonds is an actively managed fund that invests in Green Bonds globally issued by governments, government-related agencies and corporates. The selection of these bonds is based

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds invested in are either Social bonds or Sustainability bonds. The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ● ***What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?***

The Sub-fund has the following binding elements:

1. The Sub-fund allocates a minimum of 80% to Green Bonds based on external vendor data or the internally developed framework by Robeco.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### ● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### ***What is the asset allocation and the minimum share of sustainable investments?***

The Sub-fund plans to make a minimum of 90% sustainable investments, defined as investments in Green, Social or Sustainability bonds, with a minimum portion of 70% sustainable investments with an environmental objective. These percentages are minimum commitments so the two subsets are not equal to the total minimum proportion of sustainable investments in the asset allocation section. The same applies for the further split of the total minimum of environmentally sustainable investments into the minimum commitments of taxonomy-aligned and other environmental sustainable investments, where the lack of data availability and coverage also influences the level of the minimum commitments.

**Good governance practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 5% of Taxonomy-aligned activities. The Sub-fund uses CapEx as the primary metric for Taxonomy alignment because it reflects the issuers' use of proceeds planned investments in environmentally sustainable activities, which is particularly relevant for these transition sectors where current turnover does not capture future alignment. The minimum proportion of Taxonomy-aligned activities shall be calculated covering all assets of the products in accordance with Article 17 of the EU Taxonomy Regulation. The Sub-fund only makes investments in Green, Social and Sustainability bonds and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>75</sup>?**

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 70%. Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 10% with an 'Other' environmental objective because of the current data availability on the EU Taxonomy in the fund market.

<sup>75</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with a social objective?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. The Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective.

### What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

### Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the Bloomberg MSCI Global Green Bond Index as a reference index to meet the sustainable investment objective of The Sub-fund.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

### ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

Given that sustainable investment objective of The Sub-fund is to finance investment in Green Bonds, the reference index is aligned with such objective of The Sub-fund by applying clearly defined rules for evaluating Green Bonds composition in the index.

Bloomberg MSCI evaluates Green Bonds to ensure adherence to established Green Bond Principles (GBP) and to examine bonds by their environmental use of proceeds. The index provider follows an

eligibility criteria along four dimensions as per the GBP for assessing eligibility to index. In this way The Sub-fund's investment objective is aligned with the reference index.

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy of The Sub-fund.

The Bloomberg MSCI Global Green Bond Index is rebalanced on the last business day of each month. New bond issues are not added to the Projected Universe until after the Green Bond Evaluation. On the 25th calendar day of each month, the list of Green Bonds that are evaluated is updated by MSCI ESG Research which are taken into consideration before rebalancing.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of Green Bonds.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

## **Where can I find more product specific information online?**

## I) Robeco Climate Global Credits

## Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**The EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global Credits

Legal entity identifier: 213800LB657HDJBI4637

## Sustainable investment objective

## Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

### What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to reduce the Carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.

The Sub-fund also promotes investment in Green, Social and/or Sustainability bonds used to finance environmental and social projects.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

### What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted Carbon footprint compared to the Paris-Aligned Benchmark.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as a result of the application of Robeco's Exclusion Policy.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

### How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the Regulation on EU Climate Benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

### How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Paris Aligned Global Corporate Index or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website

(<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

### *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

### **Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Via the Carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year

before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

Robeco Climate Global Credits is an actively managed fund that invests mainly in nongovernment bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?***

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted Carbon footprint is better than the Paris-Aligned Benchmark.
2. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund refrains from investing in companies that are excluded on the basis of Article 12 of the Regulation on EU Climate Benchmarks as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks. This includes the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

**Good governance** practices include sound management structures, employee relations,

remuneration of staff and tax compliance.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework, sustainable investments that adhere to the Paris-Aligned Benchmark criteria, and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>76</sup>?

Yes:

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>76</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 50%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with a social objective?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

## Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

Yes, the Sub-fund follows the Solactive Paris Aligned Global Corporate Index as a reference index to meet the Carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

### ● ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their Carbon footprint.

The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out in Article 12 of the Regulation on EU Climate Benchmarks.

The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted Carbon footprint is better than the Solactive Paris Aligned Global Corporate Index.

### ● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

The Sub-fund follows a rebalancing strategy which ensures that the Carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

### ● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

### ● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.solactive.com/indices/>

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

<https://www.robeco.com/en/funds/>

## m) Robeco Transition Emerging Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco Transition Emerging Credits**

**Legal entity identifier: 5493008QKCFW6Q0H681**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in companies and/or entities that contribute to the climate transition, nature or biodiversity transition and/or social transition. These Transition-related Investments are identified to be making, enabling and/or financing the transitional efforts required to limit global temperature increase to well-below 2°C degrees aligned with the goals of the Paris Agreement, to halt and reverse biodiversity loss to put nature on a path to recovery for the benefit of people and planet, and to advance relevant targets for social development.
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition, nature or biodiversity transition and/or social transition.  
More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies.

Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Transition Emerging Credits is an actively managed fund that invests in corporate bonds in emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to climate transition, nature or biodiversity transition and/or social transition:
  - a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
  - b. Investments enabling the transition: entities that provide products and services that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate an economy-wide transition, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13 (contributing to the climate transition), a positive score on SDG 12, 14 and/or SDG 15 (contributing to the nature or biodiversity transition) and/or a positive score on SDG 1 – 6, SDG 8 - 11 and/or SDG 16 and 17 (contributing to the social transition). The framework indicates companies and/or entities that provide solutions to enable climate change mitigation, halt or reverse biodiversity loss and/or advance social development.
  - c. Investments financing the transition: eligible Green, Social and/or Sustainability bonds as based on external vendor data or the internally Robeco ESG Bond Frameworks.
2. The Sub-fund invests a minimum of 15% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco->

[sustainability-risk-policy.pdf](#)). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents, government debt, and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>77</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

<sup>77</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, government bonds, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## n) Robeco Climate Global High Yield Bonds

**Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Climate Global High Yield Bonds

**Legal entity identifier:** 2138005J7Y35MUMDFU85

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

### What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to reduce the Carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2°C.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in Green, Social and/or Sustainability bonds used to finance environmental and social projects.

The sustainable investments made by the Sub-fund will contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

### ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted Carbon footprint compared to the Paris-Aligned Benchmark.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

### ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the Regulation on EU Climate Benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

### ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All sustainable investments are constituents of Solactive Global High Yield Corporate PAB Select Indexor follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Via the Carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco Climate Global High Yield Bonds is an actively managed fund that invests mainly in high yield corporate bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted Carbon footprint is better than the Paris-Aligned Benchmark.
2. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund refrains from investing in companies that are excluded on the basis of Article 12 of the Regulation on EU Climate Benchmarks as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks. This includes the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework, sustainable investments that adhere to the Paris-Aligned Benchmark criteria, and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

## How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

## Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>78</sup>?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

## What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>78</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 50%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

In addition, Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

### **What is the minimum share of sustainable investments with a social objective?**

Social or Sustainability bonds may invest (part of) the proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

## Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund follows the Solactive Global High Yield Corporate PAB Select Index as a reference index to meet the Carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

### ● *How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?*

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their Carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others for the corporate bond part, the reference index is aligned with those criteria set out in Article 12 of the Regulation on EU Climate Benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's overall weighted Carbon footprint score in each of the government part and the corporate part is better than the respective part of the Solactive Global High Yield Corporate PAB Select Index.

### ● *How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?*

The methodology of the reference index follows rebalancing rules on a monthly basis for index eligibility and rebalances on a six month basis for decarbonization, which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data sourced from Institutional Shareholder Services Inc for corporate issuers and from the Emissions Database for Global Atmospheric Research (EDGAR) for sovereign issuers.

The Sub-fund follows a rebalancing strategy which ensures that the Carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

### ● *How does the designated index differ from a relevant broad market index?*

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on decarbonization and on greenhouse gas emission reduction and related exclusions.

### ● *Where can the methodology used for the calculation of the designated index be found?*

The index methodology can be found on the relevant webpages by the index provider: <https://www.solactive.com/indices/>

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## o) Robeco High Income Green Bonds

## Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco High Income Green Bonds

**Legal entity identifier:** 213800PLNWH9PVP39A71

## Sustainable investment objective

### Does this financial product have a sustainable investment objective?

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective: 80%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

## What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in Green Bonds, as well as in social and/or Sustainability bonds. With these investments, the Sub-fund finances investments that can contribute to environmental goals like:

- Climate change mitigation and adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- Pollution prevention, and
- Protection of healthy ecosystems.

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

## *What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?*

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in Green Bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

## *How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

## *How have the indicators for adverse impacts on sustainability factors been taken into account?*

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Green Bonds Principles and their respective Bonds principles.

For a large share of Green, Social and Sustainability bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bond Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

For Green Bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of Green, Social and Sustainability bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI

indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Green, Social and Sustainability bonds are assessed via Robeco's Green Bond Framework and/ or Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco High Income Green Bonds is an actively managed fund that invests in Green Bonds globally issued by corporates, governments, government-related agencies. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds that can be invested in are either Social bonds or Sustainability bonds. The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund allocates a minimum of 80% to Green Bonds based on external vendor data or the internally developed framework by Robeco.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation and the minimum share of sustainable investments?

**Asset allocation** describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, defined as investments in Green, Social or Sustainability bonds, with a minimum portion of 80% sustainable investments with an environmental objective. These percentages are minimum commitments and the two subsets are not equal to the total minimum proportion of sustainable investments in the asset allocation section. The same apply for the further split of the total minimum of environmentally sustainable investments into the minimum commitments of Taxonomy-aligned and other environmental sustainable investments, where the lack of data availability and coverage also influences the level of the minimum commitments. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 2% of Taxonomy-aligned activities. The Sub-fund uses CapEx as the primary metric for Taxonomy alignment because it reflects the issuers' use of proceeds planned investments in environmentally sustainable activities, which is particularly relevant for these transition sectors where current turnover does not capture future alignment. The minimum proportion of Taxonomy-aligned activities shall be calculated covering all assets of the products in accordance with Article 17 of the EU Taxonomy Regulation. The Sub-fund only makes investments in

Green, Social and Sustainability bonds and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>79</sup>?**

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>79</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 80%. Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments without alignment to the EU Taxonomy of 10% with an other environmental objective because of the current data availability on the EU Taxonomy in the fund market.

### What is the minimum share of sustainable investments with a social objective?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. The Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective.

### What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

### Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No, the Sub-fund does not designate a reference benchmark since an appropriate index is not available to solely capture the Green Bonds and other use-of-proceeds bonds across the geography, investment segments as designed in the strategy. The sustainable objective of the Sub-fund is met by investing in Green Bonds which help finance/ re-finance projects that have environmental goals clearly highlighted in accordance with ICMA principles.

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objective.

## p) Robeco Global Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Bonds

Legal entity identifier: 213800KHKSU4A3TFEX76

**Environmental and/or social characteristics****Does this financial product have a sustainable investment objective?**
☒ ☒ ☐ **Yes**
☒ ☐ ☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**
☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds used that are used to finance environmental and social projects.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking by setting a minimum eligibility threshold. The Robeco Country Sustainability Ranking incorporates a wide range of factors such as aging, corruption, social unrest, political risks and environmental risks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

1. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The % of holdings with an Elevated sustainability risk profile.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of the Exclusion policy.
2. The minimum weighted average score on Robeco's Country Sustainable Ranking

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)

- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)

For Corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

To sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Robeco's Country Sustainability Ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Global Bonds is an actively managed fund that invests globally in bonds and other marketable debt securities and instruments issued or guaranteed by OECD member states and by companies based in OECD countries. The Sub-fund also has the flexibility to invest in Emerging Debt. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

1. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

The Sub-fund has the following binding elements to attain the E/S characteristics for the government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry- established

**Good governance**  
practices include  
sound management  
structures, employee

relations, remuneration of staff and tax compliance.

norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% in sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section.

Investments in the category 'Other', estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>80</sup>?

Yes

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

<sup>80</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## q) Robeco QI Global Dynamic Duration

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Robeco QI Global Dynamic Duration

**Legal entity identifier:** 213800O6XS66TUE3KZ90

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund has a lower Carbon footprint than the General Market Index (i.e. JPM GBI Global Index IG).
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's portfolio has a better average ESG score on Robeco's Country Sustainability Ranking as compared to the General Market Index
3. The weighted carbon emissions per capita as compared to the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

## How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Robeco's Country Sustainability Ranking, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Tabel 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco QI Global Dynamic Duration is an actively managed Sub-fund that invests worldwide in government bonds with investment grade quality. The selection of these bonds is based on quantitative

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies Robeco's good governance and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.
3. The Sub-fund's weighted carbon emissions per capita is better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

The Sub-fund invests in government bonds, to which Robeco's Good Governance policy is not applicable. Robeco does have a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry-established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?<sup>81</sup>**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>81</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

## r) Robeco Emerging Markets Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Emerging Markets Bonds

**Legal entity identifier:** 213800RAMXCKXFH4DA03

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%
- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- ☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective

- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental or social objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

## How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The portion of the sustainable investments are Green, Social and Sustainability bonds. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs

and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments.

*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments linked to companies are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, as part of Robeco's Country Sustainability Ranking, used for the fundamental analysis of sovereign bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Green, social and Sustainability bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators.

Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

Robeco Emerging Markets Bonds is an actively managed fund that predominantly invests in Hard currency bonds issued by emerging market countries. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index
2. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

### ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry-established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds.

These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>82</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>82</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

## s) Robeco Emerging Markets Bonds Local Currency

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Emergings Market Bonds Local Currency

**Legal entity identifier:** 213800308WHTMH21BX88

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

### What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental or social objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The portion of the sustainable investments are Green, Social and Sustainability bonds. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments linked to companies are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy. Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, as part of Robeco's Country Sustainability Ranking, used for the fundamental analysis of sovereign bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Green, social and Sustainability bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators.

Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### **What investment strategy does this financial product follow?**

Robeco Emerging Markets Bonds Local Currency is an actively managed fund that predominantly invests in Local currency bonds issued by emerging market countries. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index
2. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

### ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>83</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>83</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## t) Robeco Global Investment Grade Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Global Investment Grade Credits

**Legal entity identifier:** 213800VSTJLMT57MIQ25

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of the Sub-fund invested in Green, Social, Sustainability bonds.
4. The % of holdings with an Elevated sustainability risk profile.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to UN SDGs and some of the environmental objectives under EU Taxonomy.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

*How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

*How have the indicators for adverse impacts on sustainability factors been taken into account?*

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account: via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis,

the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

**The investment strategy guides** investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Investment Grade Credits is an actively managed fund that invests in bonds in a diversified portfolio of global investment grade corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>.
3. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration. The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. The sustainable investments aim to contribute to the UN Sustainable Development Goals.

The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>84</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear**

<sup>84</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in issuers that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-

fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The Sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Where relevant, minimum environmental or social safeguards apply to the underlying securities. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## 5. REGIONAL BOND SUB-FUNDS

### a) Robeco Euro Government Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco Euro Government Bonds**

**Legal entity identifier: 2138004UVBQIDUAW9R66**

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score on Robeco's Country Sustainability Ranking.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund invests in Green Bonds, Social bonds and/or Sustainability bonds used to finance environmental and social projects. A description of Green bonds, Social Bonds and Sustainability bonds is included in the Glossary of Defined Terms section of this Prospectus.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by applying Robeco's ESG bond eligibility frameworks in the selection process. Robeco's ESG bond eligibility frameworks require that international norms related to social and governance issues are met. Under the frameworks, ESG bond investments are assessed on (i) social safeguards – the issuer respects international Human and Labor Rights, (ii) controversial behavior – the issuer is not in violation of the UN Global Compact, and (iii) sanctions – the issuer is not subject to international sanctions.

To identify whether an issuer is involved in a controversy, ratings and data from external providers are used to aid our in-house monitoring. If a controversy is found, the analyst determines whether this has material impacts on the ESG bond analysis and/or the SDG score. If the controversy is deemed material, the issuer receives a negative SDG Score and the investment is not sustainable.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account during the investment analysis as part of Robeco's Green, Social or Sustainability bond eligibility frameworks:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16). A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

As the Sub-fund invest in sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability Ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Euro Government Bonds is an actively managed fund that invests predominantly in euro government bonds. The selection of these bonds is based on fundamental analysis as described in the

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6.5 on Robeco's Country Sustainability Ranking.
3. The Sub-fund invests a minimum of 10% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>85</sup>?**

Yes

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- **What is the minimum share of investments in transitional and enabling activities?**

0%.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

<sup>85</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

<https://www.robeco.com/en/funds/>

## b) Robeco Euro Credit Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro Credit Bonds

Legal entity identifier: 213800CVNA3PA3BONW52

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Euro Credit Bonds is an actively managed fund that provides a diversified exposure to the euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
3. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

### ● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>86</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

<sup>86</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### ● What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### ● What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as the Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### ● What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and

economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## c) Robeco All Strategy Euro Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name: Robeco All Strategy Euro Bonds**

**Legal entity identifier: 213800PDS63NUN165C09**

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

### What environmental and/or social characteristics are promoted by this financial product?

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as exposure to controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as exposure to controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

1. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The % of corporate holdings with an Elevated sustainability risk profile.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The minimum weighted average score on Robeco's Country Sustainable Ranking.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

For corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

In addition, the Sub-fund invest in sovereigns and supranationals, for which sustainable investments defined as Green, Social and/or Sustainability bonds from these issuers are not aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability Ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco All Strategy Euro Bonds is an actively managed fund that invests primarily in euro-denominated government and non-government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

1. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

The Sub-fund has the following binding elements to attain the E/S characteristics for government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. As and when the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

### **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>87</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

<sup>87</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### ● What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

## What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

## Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## d) Robeco European High Yield Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco European High Yield Bonds

**Legal entity identifier:** 21380033AH4QAGYE2R38

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco European High Yield Bonds is an actively managed fund that invests in bonds with a sub-investment grade rating, issued primarily by European and US issuers. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>88</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial

<sup>88</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*in relation to the investments of the financial product other than sovereign bonds.*

**\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**

**\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## e) Robeco Transition Asian Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Transition Asian Bonds

**Legal entity identifier:** 21380096HMIZ4YU8CM47

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in companies and/or entities that contribute to the climate transition, nature or biodiversity transition and/or social transition. These Transition-related Investments are identified to be making, enabling and/or financing the transitional efforts required to limit global temperature increase to well-below 2°C degrees aligned with the goals of the Paris Agreement, to halt and reverse biodiversity loss to put nature on a path to recovery for the benefit of people and planet, and to advance relevant targets for social development.
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition, nature or biodiversity transition and/or social transition.  
More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Transition Asian Bonds is an actively managed fund that invests in corporate and government bonds in Asia. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to climate transition, nature or biodiversity transition and/or social transition:
  - a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
  - b. Investments enabling the transition: entities that provide products and services that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate an economy-wide transition, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13 (contributing to the climate transition), a positive score on SDG 12, 14 and/or SDG 15 (contributing to the nature or biodiversity transition) and/or a positive score on SDG 1 – 6, SDG 8 - 11 and/or SDG 16 and 17 (contributing to the social transition). The framework indicates companies and/or entities that provide solutions to enable climate change mitigation, halt or reverse biodiversity loss and/or advance social development.
  - c. Investments financing the transition: eligible Green, Social and/or Sustainability bonds as based on external vendor data or the internally Robeco ESG Bond Frameworks.
2. The Sub-fund invests a minimum of 15% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents, government debt and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

### **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>89</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

<sup>89</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### ● What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, government bonds, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

## f) Robeco Euro SDG Credits

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro SDG Credits

Legal entity identifier: 213800MQYJBHGNZW597

**Environmental and/or social characteristics****Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and fossil fuels. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

Robeco Euro SDG Credits is an actively managed fund and provides a diversified exposure to the Euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund invests a minimum of 10% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## *What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?*

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## *What is the policy to assess good governance practices of the investee companies?*

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

## What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>90</sup>?

Yes

In fossil gas

In nuclear energy

No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>90</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### **What is the minimum share of socially sustainable investments?**

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:**

## g) Robeco Financial Institutions Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Financial Institutions Bonds

**Legal entity identifier:** 213800M7K3R9AYOXVL19

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

✗ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis,

the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Financial Institutions Bonds is an actively managed fund that mainly invests in subordinated euro-denominated bonds issued by financial institutions. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### ● *How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?*

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

### ● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>91</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

<sup>91</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

### What is the minimum share of investments in transitional and enabling activities?

0%.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

(Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

#### **More product-specific information can be found on the website:**

## h) Robeco Euro Short Duration Bonds

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Euro Short Duration Bonds

**Legal entity identifier:** 213800YAYEQ8JA643775

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in Green, Social and/or Sustainability bonds used to finance environmental and social projects.
3. The Fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.

## What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account during the investment analysis as part of Robeco's Green, Social or Sustainability bond eligibility frameworks:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16). A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>).

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies.

Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## What investment strategy does this financial product follow?

Robeco Euro Short Duration Bonds is an actively managed fund that invests in bonds denominated in the EURO currency. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund invests a minimum of 2.5% in Green, Social and/or Sustainability bonds (ESG-labelled bonds). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16).
3. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index

## What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

## What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Asset allocation** describes the share of investments in specific assets.

## What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. The sustainable investments aim to contribute to the UN Sustainable Development Goals. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section.

The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>92</sup>?

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

## What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic

<sup>92</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## 6. ASSET ALLOCATION SUB-FUNDS

### a) Robeco Dynamic Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Dynamic Allocation

Legal entity identifier: 213800GWKC7Z8TN6R360

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐ It will make a minimum of **sustainable investments with an environmental objective: \_\_\_\_%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: \_\_\_\_%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.

2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings and agenda items voted.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

Robeco Dynamic Allocation is an actively managed global multi asset fund. The Sub-fund's objective is to achieve a better return than the index. The Sub-fund has a relatively high risk profile and uses asset allocation strategies mainly investing directly in equities and taking exposure to other asset classes such as, but not exclusively, bonds, deposits and money market instruments. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**What is the asset allocation planned for this financial product?**

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of

investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>93</sup>

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

<sup>93</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

**More product-specific information can be found on the website:**

## b) Robeco High Income Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco High Income Allocation

Legal entity identifier: 213800SXP6WFIGLUYC39

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.

2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings and agenda items voted.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United

Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

## What investment strategy does this financial product follow?

Robeco High Income Allocation is an actively managed fund that invests in a mix of asset classes across the world. The Sub-fund's objective is to achieve long term capital growth whilst maintaining a consistent level of income. The Sub-fund has a relatively low risk profile and uses asset allocation strategies mainly investing directly in bonds and taking exposure to other asset classes such as, but not exclusively, equities. The asset allocation strategy is subject to investments and volatility restrictions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

## *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## What is the asset allocation planned for this financial product?

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 25% sustainable investments, measured by either positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**<sup>94</sup>

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

0%.

<sup>94</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

## c) Robeco Flexible Allocation

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Robeco Flexible Allocation

**Legal entity identifier:** 213800K1HHD25EVUAK49

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The average ESG score on Robeco's Country Sustainable Ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.

2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings and agenda items voted.

***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

 No

### What investment strategy does this financial product follow?

Robeco Flexible Allocation is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by taking global exposure to asset classes such as equities, bonds, deposits, Alternative Investments and/or other generally accepted asset classes. The Sub-fund applies a flexible allocation strategy, which means the Sub-fund's portfolio composition will be determined and adjusted based on market conditions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry-established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>95</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

- What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>95</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

0%

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## Where can I find more product specific information online?

### More product-specific information can be found on the website:

## d) Robeco Global Target Maturity Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Target Maturity Bonds

Legal entity identifier: TBD

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

☐ It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

### ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.

### ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

### ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)).

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1).
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3).
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

### What investment strategy does this financial product follow?

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Target Maturity Bonds is an actively managed fund that invests in bonds denominated in the EURO/USD currency. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

### *What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?*

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

- ***What is the policy to assess good governance practices of the investee companies?***

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/docm/docu-exclusion-list.pdf>.

### **What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

#### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>96</sup>?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to

<sup>96</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 **What is the minimum share of socially sustainable investments?**

0%.

 **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as

investment purposes (in line with the investment policy). Where relevant, minimum environmental or social safeguards apply to the underlying securities.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## e) Robeco Step-in Global Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Step-in Global Equities

Legal entity identifier: TBD

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_\_%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** \_\_\_\_%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The average ESG score on Robeco's Country Sustainable Ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes, \_\_\_\_\_

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for

human rights, anti-corruption and anti-bribery matters.

- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)).

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1).
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3).
- o Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### What investment strategy does this financial product follow?

Robeco Step-in Global Equities is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by initially investing in fixed income assets and gradually increasing the exposure to global equity over time. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds.

### What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

#### ● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

#### ● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global equity, fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>97</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

<sup>97</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

### What is the minimum share of socially sustainable investments?

0%

### What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### Where can I find more product specific information online?

#### More product-specific information can be found on the website:

<https://www.robeco.com/en/funds/>

## f) Robeco Step-in Income Allocation

## Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Step-in Income Allocation

Legal entity identifier: TBD

## Environmental and/or social characteristics

## Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: \_\_\_\_%It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## What environmental and/or social characteristics are promoted by this financial product?

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

## What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The average ESG score on Robeco's Country Sustainable Ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, \_\_\_\_\_

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)).

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1).
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3).
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

## What investment strategy does this financial product follow?

Robeco Step-in Income Allocation is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by initially investing in low-risk fixed income assets and gradually increasing the global exposure to asset classes such as equities, bonds, and other fixed income securities, deposits, and/or other generally accepted asset classes, aiming higher levels of income.

The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-

**The investment strategy** guides investment decisions based on factors such as investment

objectives and risk tolerance.

based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

### What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

### What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global equity, fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>98</sup>?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

\*\* As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

<sup>98</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of investments in transitional and enabling activities?**  
0%.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

0%

**What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
