What are the risks and what could I get in return?

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as class 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity to pay you.

Be aware of currency risk. The currency of this share class may be different from that of your country, as you may receive payments in the currency of this share class and not that of your country, the final return will depend on the exchange rate between these two currencies.

Not all risks affecting the Fund are adequately captured by the summary risk indicator.

This rating does not take into account other risk factors which should be considered before investing, these include:
Credit, Counterparty, Sustainability, Liquidity, Derivatives, Emerging Markets

This product does not include any protection from future market performance, so you could lose some or all of your investment. For further information please refer to the Fund prospectus, available free of charge at: www.morganstanley.com/im

If we are not able to pay you what is owed, you could lose your entire investment.

Performance Scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your adviser or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product over the last 10 years, by identifying, depending on the performance scenarios and as defined in the Key Information Document's EU regulation, all overlapping sub-intervals individually (i) equal in length to the recommended holding period which start or end in each month which are contained within that period of 10 years or (ii) equal or shorter in length to the recommended holding period, but equal to or longer than one year, which end at the end of that period of 10 years. Markets could develop very differently in the future.

The stress scenario shows what you might get back in extreme market circumstances.

What happens if MSIM Fund Management (Ireland) Limited is unable to pay out?

The assets of the Fund are held in safekeeping by the Depositary. In the event of the insolvency of the Management Company, the Fund's assets in the safekeeping of the Depositary will not be affected. In the event of the Depositary's insolvency, the Fund may suffer a financial loss. However, this risk is mitigated to a certain extent as the Depositary is required by law and regulation to segregate its own assets from those of the Fund. The Depositary will also be liable to the Fund and the investors for any loss arising from its negligence, fraud or intentional failure to fulfill its obligations. Such loss is not covered by an investors compensation or protection scheme.
